*Star Wars: Galaxies - The Ruins of Dantooine* Haden Blackman, Voronica Whitney-Robinson, 2012-10-31 It is a time of great turmoil. The oppressive Empire is close to seizing complete control of the galaxy. The ragtag guerilla army of the Rebel Alliance fights on, striking wherever it can, but now something has come to light that could spell certain doom. Hidden in the Jedi ruins of Dantooine is a Holocron containing a list of high level Rebel sympathisers. If that list were to fall into the hands of Darth Vader, the Rebel Alliance would lose its most valued support - and possibly the way itself. As an Imperial bio engineer who frequently visits other worlds, Dusque Mistflier is the perfect cover for a Rebel who needs to travel far and wide without arousing suspicion. She agrees to help Rebel spy Finn Darktrin in his quest to recover the crucial Holocron. Despite help from Han, Luke and Leia the mission is fraught with peril. As their journey takes them into the fiery belly of the beast that is galactic civil war, Dusque and Finn will learn that the hardest part of all is figuring out whose side you're on - and how far you're willing to go to win ...

**The Knowledge Illusion** Steven Sloman, Philip Fernbach, 2017-03-14 "The Knowledge Illusion is filled with insights on how we should deal with our individual ignorance and collective wisdom." -Steven Pinker We all think we know more than we actually do. Humans have built hugely complex societies and technologies, but most of us don't even know how a pen or a toilet works. How have we achieved so much despite understanding so little? Cognitive scientists Steven Sloman and Philip Fernbach argue that we survive and thrive despite our mental shortcomings because we live in a rich community of knowledge. The key to our intelligence lies in the people and things around us. We're constantly drawing on information and expertise stored outside our heads: in our bodies, our environment, our possessions, and the community with which we interact - and usually we don't even realize we're doing it. The human mind is both brilliant and pathetic. We have mastered fire, created democratic institutions, stood on the moon, and sequenced our genome. And yet each of us is error prone, sometimes irrational, and often ignorant. The fundamentally communal nature of intelligence and knowledge explains why we often assume we know more than we really do, why political opinions and false beliefs are so hard to change, and why individual-oriented approaches to education and management frequently fail. But our collaborative minds also enable us to do amazing things. The Knowledge Illusion contends that true genius can be found in the ways we create intelligence using the community around us.

**CAPE** Courtney N. Plante, Stephen Reysen, Thomas R. Brooks, Daniel Chadborn, 2021-10-19 Researchers across disciplines have been studying the psychology of fans for decades. Seeking to better understand fan behavior and the various factors motivating fans, researchers have studied dozens of variables in hundreds of studies of different fan groups. To date, however, there have been relatively few attempts to integrate this sizable body of work, pulling together findings across from the field to with a broader, more holistic perspective. This book does exactly that, identifying and concisely summarizing research on 28 separate lines of inquiry on the psychology of fans and integrating it all into an empirically-validated model known as the CAPE model. Useful as a textbook for a fandom studies course and as a handbook for fan researchers, this book is essential reading for anyone

looking to better understand the state of fan psychology and wanting to conduct their own research exploring the ins and outs of fans of all sorts!

**The Journey of Luke Skywalker** Steven A. Galipeau, 2015-12-14 Using C. G. Jung's approach to dreams and myths, Jungian analyst Steven Galipeau reveals to readers the wealth of symbolism and meaning embedded in George Lucas's modern fairytale. From the battle between light femininity and dark masculinity to the conflict between nature and technology, Galipeau explains why the characters and themes in the movies resonate so deeply with us. Appealing to Star Wars fans as well as those interested in popular culture, contemporary myths, and archetypes, *The Journey of Luke Skywalker* will bring new insight to the most popular film series of the last two decades. Behind the space dogfights and light-saber duels is a mythology that touches a chord in the human psyche . . . this title will be the basis of many internet discussions—not to mention term papers—by fans who will enjoy it. Recommended. —Michael Rogers, *Library Journal*

**Love with a Chance of Drowning** Torre DeRoche, 2013-05-14 New love. Exotic destinations. A once-in-a-lifetime adventure. What could go wrong? City girl Torre DeRoche isn't looking for love, but a chance encounter in a San Francisco bar sparks an instant connection with a soulful Argentinean man who unexpectedly sweeps her off her feet. The problem? He's just about to cast the dock lines and voyage around the world on his small sailboat, and Torre is terrified of deep water. However, lovesick Torre determines that to keep the man of her dreams, she must embark on the voyage of her nightmares, so she waves good-bye to dry land and braces for a life-changing journey that's as exhilarating as it is terrifying. Somewhere mid-Pacific, she finds herself battling to keep the old boat, the new relationship, and her floundering sanity afloat. . . . This sometimes hilarious, often harrowing, and always poignant memoir is set against a backdrop of the world's most beautiful and remote destinations. **Intelligent Adaptive Systems** Ming Hou, Simon Banbury, Catherine Burns, 2014-12-02 As ubiquitous as the atmosphere, intelligent adaptive systems (IASs) surround us in our daily lives. When designed well, these systems sense users and their environments so that they can provide support in a manner that is not only responsive to the evolving situation, but unnoticed by the user. A synthesis of recent research and developments on IASs from the human factors (HF) and human-computer interaction (HCI) domains, *Intelligent Adaptive Systems: An Interaction-Centered Design Perspective* provides integrated design guidance and recommendations for researchers and system developers. The book explores a recognized lack of integration between the HF and HCI research communities, which has led to inconsistencies between the research approaches adopted, and a lack of exploitation of research from one field by the other. The authors integrate theories and methodologies from these domains to provide design recommendations for human-machine developers. They then establish design guidance through the review of conceptual frameworks, analytical methodologies, and design processes for intelligent adaptive systems. The book draws on case studies from the military, medical, and distance learning domains to illustrate intelligent system design to examine lessons learned. Outlining an interaction-centered perspective for designing an IAS, the book

details methodologies for understanding human work in complex environments and offers understanding about why and how optimizing human-machine interaction should be central to the design of IASs. The authors present an analytical and design methodology as well as an implementation strategy that helps you choose the proper design framework for your needs.

*Developing Sustainable Digital Libraries: Socio-Technical Perspectives* Ashraf, Tariq, Sharma, Jaideep, Gulati, Puja Anand, 2010-03-31 This book provides tools to complement an organization's burgeoning information treasuries, exploring new frontiers by looking at social and economic aspects of digital libraries and their sustainability--Provided by publisher.

*Fundamentals of Robotic Mechanical Systems* Jorge Angeles, 2013-03-09 Mechanical engineering, an engineering discipline borne of the needs of the industrial revolution, is once again asked to do its substantial share in the call for industrial renewal. The general call is urgent as we face profound issues of productivity and competitiveness that require engineering solutions, among others. The Mechanical Engineering Series features graduate texts and research monographs intended to address the need for information in contemporary areas of mechanical engineering. The series is conceived as a comprehensive one that covers a broad range of concentrations important to mechanical engineering graduate education and research. We are fortunate to have a distinguished roster of consulting editors on the advisory board, each an expert in one of the areas of concentration. The names of the consulting editors are listed on the next page of this volume. The areas of concentration are: applied mechanics; biomechanics; computational mechanics; dynamic systems and control; energetics; mechanics of materials; processing; thermal science; and tribology.

*In the Bubble* John Thackara, 2006-02-17 How to design a world in which we rely less on stuff, and more on people. We're filling up the world with technology and devices, but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book, *In the Bubble: Designing for a Complex World*. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology, so it would be no small matter if tech ceased to be an end-in-itself in our daily lives. Technology is not going to go away, but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing, and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it, and how? *In the Bubble* is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now—not in a remote science fiction future; it's not about, as he puts it, the schlock of the new but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. *In the Bubble* describes services designed to help people carry out daily activities in new ways. Many of these services involve technology—ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services, not things. And new principles—above all, lightness—inform the way these services are designed and used. At the heart of *In the Bubble* is a belief, informed by a wealth of real-world examples, that ethics and responsibility can inform design decisions without impeding social and technical innovation.

*Star Wars: the Art of the Brothers Hildebrandt* Bob Woods, 1997 Gathers the Star Wars paintings of Greg and Tim Hildebrandt while offering a glimpse into the artists' creative processes.

*Anatomy of a Robot* Charles Bergren, 2003-04-22 This work looks under the hood of all robotic projects, stimulating teachers, students, and hobbyists to learn more about the gamut of areas associated with control systems and robotics. It offers a unique presentation in providing both theory and

philosophy in a technical yet entertaining way.

*Autonomous Flying Robots* Kenzo Nonami, Farid Kendoul, Satoshi Suzuki, Wei Wang, Daisuke Nakazawa, 2010-09-15 The advance in robotics has boosted the application of autonomous vehicles to perform tedious and risky tasks or to be cost-effective substitutes for their – man counterparts. Based on their working environment, a rough classification of the autonomous vehicles would include unmanned aerial vehicles (UAVs), – manned ground vehicles (UGVs), autonomous underwater vehicles (AUVs), and autonomous surface vehicles (ASVs). UAVs, UGVs, AUVs, and ASVs are called UVs (unmanned vehicles) nowadays. In recent decades, the development of – manned autonomous vehicles have been of great interest, and different kinds of autonomous vehicles have been studied and developed all over the world. In particular, UAVs have many applications in emergency situations; humans often cannot come close to a dangerous natural disaster such as an earthquake, a flood, an active volcano, or a nuclear disaster. Since the development of the first UAVs, research efforts have been focused on military applications. Recently, however, demand has arisen for UAVs such as aero-robots and flying robots that can be used in emergency situations and in industrial applications. Among the wide variety of UAVs that have been developed, small-scale HUAVs (helicopter-based UAVs) have the ability to take off and land vertically as well as the ability to cruise in flight, but their most important capability is hovering. Hovering at a point enables us to make more effective observations of a target. Furthermore, small-scale HUAVs offer the advantages of low cost and easy operation.

*Handbook of Research on Technoself: Identity in a Technological Society* Luppicini, Rocci, 2012-10-31 This book provides insights to better enhance the understanding of technology's widespread intertwinement with human identity within an advancing technological society--Provided by publisher.

**Psychoanalysis of Technoscience** Hub Zwart , 2019-02-20 This book presents a psychoanalysis of technoscience. Basic concepts and methods developed by Freud, Jung, Bachelard and Lacan are applied to case histories (palaeoanthropology, classical conditioning, virology). Rather than by disinterested curiosity, technoscience is driven by desire, resistance and the will to control. Moreover, psychoanalysis focusses on primal scenes (Dubois' quest for the missing link, Pavlov's discovery of the conditioned reflex) and opts for triangulation: comparing technoscience to different scenes provided by novels, so that Dubois's work is compared to missing link novels by Verne and London and Pavlov's experiments with Skinner's *Walden Two*, while virology is studied through the lens of viral fiction.
