**Antonov's Heavy Transports** Yefim Gordon,Dmitriy Komissarov,2020-11-28 This book charts the development and service history of the Antonov design bureau's heavy transport aircraft. In the late 1950s, the Antonov design bureau began developing the An-22 heavy military transport, intended to carry 50 tons. Powered by four 15,000 hp turboprops, it was the world's heaviest transport when it first flew in February 1965. The four-turboprop An-124 was again the world's most capable airlifter when it emerged in 1982, with a payload of 120 tons. It proved its worth in military and humanitarian operations and earned acclaim as a commercial freighter after 1991 for carrying heavy and outsized items. The unique six-engined An-225 Mriya was created for carrying the Buran space shuttle. Despite the demise of the Buran program, the aircraft found use on the heavy/outsized cargo transportation market. It is illustrated by a wealth of new photos and color artwork, as well as line drawings.â

*MIG-23/27 Flogger* E. Gordon,Yefim Gordon,Keith Dexter,2005 The latest title in the renowned Aerofax series is a detailed history of the development and operation of the Soviet interceptor, the MiG23/27, code named in the west, Flogger. In the era of the Cold War, the military planners on both sides of the Iron Curtain were very aware of the threat to their security both from bombers which could carry nuclear weapons and from spyplanes. Thus it was deemed essential to have fast fighter aircraft which could intercept and destroy such incoming threats. The MiG-23 was

developed to succeed the MiG-21 as the standard Soviet interceptor. It was a major advance on the earlier aircraft. Its swing-wing configuration was a generation on from its predecessor. Deliveries began in 1972 and in excess of 3,000 aircraft were built before production ended in 1986. As was the case with many Soviet types, the MiG-23 was widely exported to satellite or friendly countries. The MiG-23 saw service with air forces in the Middle East, the Far East, Cuba and Eastern Europe and a licenced version was built in India. The book also covers the history and operation of the MiG-27, a development of the MiG-23. This was a tactical strike aircraft with a completely redesigned forward fuselage which was produced in significant quantities from the late 1970s onwards. Both of these important types will be covered in the usual and well regarded Aerofax style which combines a thoroughly researched narrative with many photographs. This volume in the series will complete the Aerofax coverage of MiG design bureau's major modern types.

**Fundamentals of Aircraft and Rocket Propulsion**  
Ahmed F. El-Sayed, 2016-05-25 This book provides a

comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

WIG Craft and Ekranoplan Liang Yun, Alan Bliault, Johnny Doo, 2009-12-03 In the last half-century, high-speed water transportation has

developed rapidly. Novel high-performance marine vehicles, such as the air cushion vehicle (ACV), surface effect ship (SES), high-speed monohull craft (MHC), catamaran (CAT), hydrofoil craft (HYC), wave-piercing craft (WPC) and small water area twin hull craft (SWATH) have all developed as concepts, achieving varying degrees of commercial and military success. Prototype ACV and SES have achieved speeds of 100 knots in at calm conditions; however, the normal cruising speed for commercial operations has remained around 35–50 knots. This is partly due to increased drag in an average coastal s- way where such craft operate services and partly due to limitations of the propulsion systems for such craft. Water jets and water propellers face limitations due to cavitation at high speed, for example. SWATH are designed for reduced motions in a seaway, but the hull form is not a low drag form suitable for high-speed operation. So that seems to lead to a problem – maintain water contact and either water propulsion systems run out of power or craft motions and speed loss are a problem in higher seastates. The only way to higher speed would appear to be to disconnect completely from the water surface. You, the reader, might respond with a question about racing hydroplanes, which manage speeds of above 200 kph. Yes, true, but the power-to-weight ratio is extremely high on such racing machines and not economic if translated into a useful commercial vessel.

*Flashpoint Russia* Piotr Butowski, 2019-06 Russian military aviation has undergone several upheavals in the post-Soviet era. There have been two

driving forces behind these changes. First, the Russian experience of air power in conflicts has led to an increasing integration of the various branches of the armed forces. Today's VKS was created as a result of the absorption of the Air Defence Troops (VPV0) by the Air Force (VVS) in 1998, and then a merger of the Air Force with the Aerospace Defence Troops (VVK0) in 2015.

### **Introduction to UAV Systems** Paul G.

Fahlstrom, Thomas J. Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV

programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

*Soviet X-planes* Gordon Yefim, E. Gordon, Bill Gunston, 2000 This is the first book to collect stories of the most important Soviet aircraft, including experimental machines from the early 1900s through to the latest Russian prototypes of today. About 150 types are described, each with data and many with extensive drawings.

*Ilyushin Il-28 Beagle* Yefim Gordon, Dmitrii Komissarov, 2002 Entering service with the USSR Air Force in 1950, the Ilyushin IL-28 Beagle has been dubbed 'The Russian Canberra.' This is the first in-depth study of the long-serving light bomber. Besides the USSR, it served with the air forces of Egypt, China, Czechoslovakia and Poland. The aircraft had a maximum speed of 600 mph at sea level and 515 mph at 36,000 feet. IL-28 was armed with two, fixed forward-firing 23-mm cannons and two, 23-mm cannons in a manually-directed tail position. Hardcover, 7-1/2 x 9-1/2, 224 pp, 24 color, 162 b/w and 36 line drawings

*Soviet Secret Projects* Tony Buttler, Yefim Gordon, 2005 This is the latest among Midland's very successful 'Secret Projects' series. This,

the second of three volumes covering Soviet secret aviation projects, is devoted to post-World War II fighters and will include designs from famous bureaus such as Lavochkin, Mikoyan, Sukhoi, Yakovlev, Myasishchev, and Tupolev. The book covers early post-war fighters, competitions for the first-generation supersonic designs (MiG-21 and Su-7/-9), advanced designs of the 1960s which led to the MiG-2 and competitions to build the specifications which resulted in the MiG-29, Su-27, and MiG I-44. A number of previously unpublished Yakovlev designs from the late 1950s and early 1960s form a separate chapter, followed by another covering Yakovlev's VSTOL work. The book also describes the competition between design bureaus for orders and shows the progress made in aircraft design behind the Iron Curtain. It will give both experts and enthusiasts the chance to compare this work to Western aircraft programs of the era.

**Antonov's Turboprop Twins** E. Gordon, Yefim Gordon, Dmitriai Komissarov, Sergey Komissarov, 2003  
8 1/2 x 11 1/2 pgs 200 color & b&w photos  
The An-24 was designed in the late 1950s as the Soviet counterpart of the Fokker F.27 in both appearance

and capabilities. The twin-turboprop An-24 was produced by three Soviet aircraft factories; many remain in operation. The Soviet Air Force needed a modern turboprop tactical transport with paradropping capability. Thus the airliner evolved first into the quick fix An-24T and then into the An-26 which introduced a unique sliding cargo ramp developed by Antonov and protected by many international patents. This paved the way for the hot and high An-32 and the big head An-30, a specialized aerial photography machine. Antonov's twin-turboprop family has seen civil and military service in Europe, Asia, the Middle East, Africa, North, Central and South America, making it a best-seller among Soviet commercial designs. This book lists all known operators on a country-by-country basis and is richly illustrated with photos in the liveries of assorted civil and military operators.

*Hawker Hurricane IIc* ,2021-07-05 This book compiles 4-view color profiles, scale plans, and photo details of the single variant of the Hawker Hurricane IIc. Scale plans in 1/72 and 1/48 scales plus drawings from wartime technical manuals. Also includes photos of the details in B&W and color and 4-view color profiles of the Hawker Hurricane IIc flown by Sgt Antoni Beda.

*100 Birds and How They Got Their Names* Diana Wells, 2001-10-30 How did cranes come to symbolize matrimonial happiness? Why were magpies the only creatures that would not go inside Noah's Ark? Birds and bird imagery are integral parts of our language and culture. With her remarkable ability to dig up curious and captivating facts, Diana Wells hatches a treat for active birders and armchair enthusiasts alike. Meet the intrepid adventurers and naturalists who risked their lives to describe and name new birds. Learn the mythical stories of the gods and goddess associated with bird names. Explore the avian emblems used by our greatest writers--from Coleridge's albatross in *The Ancient Mariner* to Poe's raven. A sampling of the bird lore you'll find inside: Benjamin Franklin didn't want the bald eagle on our National Seal because of its bad moral character, (it steals from other birds); he lobbied for the turkey instead. Chaffinches, whose Latin name means unmarried, are called bachelor birds because they congregate in flocks of one gender. Since mockingbirds mimic speech, some Native American tribes fed mockingbird hearts to their children, believing it helped them learn language. A group of starlings is called a murmuration because they chatter so when they roost in the thousands. Organized alphabetically, each of these bird tales is accompanied by a two-color line drawing. Dip into *100 Birds* and you'll never look at a sparrow,

an ostrich, or a wren in quite the same way.

One of the significant advantages of Beriev A 50 And Ilyushin Il 76 Aircraft Paper Models.jpg books and manuals for download is the cost-saving aspect. Traditional books and manuals can be costly, especially if you need to purchase several of them for educational or professional purposes. By accessing Beriev A 50 And Ilyushin Il 76 Aircraft Paper Models.jpg versions, you eliminate the need to spend money on physical copies. This not only saves you money but also reduces the environmental impact associated with book

~~production and~~ transportation. Furthermore, Beriev A 50 And Ilyushin Il 76 Aircraft Paper Models.jpg books and manuals for download are incredibly convenient. With just a computer or smartphone and an internet connection, you can access a vast library of resources on any subject imaginable. Whether youre a student looking for textbooks, a professional seeking industry-specific manuals, or someone interested in self-improvement, these digital resources provide an efficient and accessible means of acquiring knowledge. Moreover, PDF books and manuals offer a range of benefits compared to other digital formats. PDF files are designed to retain their formatting regardless of the device used to open them. This ensures that
