Punktown Jeffrey Thomas,Michael Marshall Smith,2005-05-01 Jeffrey Thomas' collection Punktown explored the streets and back alleys of a futuristic and nightmarish urban landscape in a series of unconnected short stories. In Punktown: Third Eye, Thomas has teleported authors Simon Logan, Jonathan Lyons, Charlee Jacob, Paul G. Tremblay, Michael McCarty, Mark McLaughlin, Garrett Peck, Thomas Andrew Hughes, and Scott Thomas into the city to pen their own tales of its citizens, aliens, mutations, and sentient machines. These talented authors bring a new perspective, a personal vision, a third eye view to the phantasmopolis that is Punktown.

Twilight of History Shlomo Sand,2017-05-02 The acclaimed and controversial historian turns his critical gaze on the writing of history today On its publication in 2009, Shlomo Sand's book The Invention of the Jewish People met with a storm of controversy. His demystifying approach to nationalist and Zionist historiography provoked much criticism from other professional historians, as well as praise. The furore gave him a privileged position to consider his academic discipline, which he reflects on here in Twilight of History. Drawing on four decades in the field, Sand takes a wider view and interrogates the study of history, whose origin lay in the need for a national ideology. Over the last few decades, traditional history has begun to fragment, yet only to give rise to a new role for historians as priests of official memory. Working in Israel has sharpened Sand's perspective, since the role of history as national myth is particularly salient in a country where the Bible is treated as a source of historical fact. He asks such questions as: Is every historical narrative ideologically marked? Do political requirements and state power weigh down inordinately on historical research and teaching? And, in such conditions, can there be a morally neutral and "scientific" truth? Despite his trenchant criticism of academic history, Sand would still like to believe that the past can be understood without myth, and finds reasons for hope in the work of Max Weber and Georges Sorel.

Deadstock Jeffrey Thomas,2007-02-27 At an abandoned apartment complex with a dark history in Punktown, a crime-ridden metropolis on the colony world Oasis, a tough street gang and a band of mutant squatters have been trapped inside by bioengineered life forms mindlessly bent on destroying them like vermin.

Extreme Origami Won Park,2012-10-15 Won Park has taken the ancient art of origami to a whole new level. Using American currency, Park transforms dollar bills into creative works of art. He relies on the fibrous quality of the paper to fold, bend and twist hundreds of times per model without tearing. With no cutting and no pasting, Park is able to incorporate the details on the bills into his model designs. His signature koi fish is folded in such a way that the patterns on the dollar bill become the scales on the fish, and even the facial features fall in exactly the right place. His designs include a wide array of vehicles, animals, and mythical creatures. In this book, step-by-step instructions are provided for 20 distinct models that are bound to challenge even the most proficient folders. The challenge includes a Formula 1 race car, a toilet, a butterfly, a koi fish, a scorpion, a sea turtle, a fox, an ox, a marlin, a car, a praying mantis, a dragon, a spider, a stag beetle, a stegosaurus, a bat, Pegasus, a fighter jet, a battle tank, and a pig. All models can be made with either one or two dollar bills. Why worry about the declining value of the U.S. dollar? Follow the instructions in this book, and you can transform your dollars into works of art!

Stereoscopic Cinema and the Origins of 3-D Film, 1838-1952 Ray Zone,2014-04-23 From stereoview cards to large-format IMAX films, 3-D technology's heightened realism and powerful visual allure have held audiences captive for over a century and a half. The technology, known as stereoscopy, creates an illusion of depth by presenting two slightly different images to the eye in print or on-screen. The advent of stereoscopic film technology excited both filmmakers and audiences, as a means of replicating all of the sounds, colors, movement, and dimensionality of life and nature for the first time. The origins of 3-D film are often linked with a proliferation of stereoscopic films in the 1950s. By the time films like *Man in the Dark* and *House of Wax* was attracting large crowds, however, the technology behind this form of filmmaking was already over a century old. *Stereoscopic Cinema and the Origins of 3-D Film, 1838--1952*, examines this novelty period of stereoscopic film, charting its progression from Charles Wheatstone's 1938 discovery of 3-D to the 1952 release of Arch Oboler's innovative film, *Bwana Devil*. Stereoscopic specialist Ray Zone argues that the development of stereoscopic film can best be understood through a historical analysis of the technology rather than of its inventors. Zone examines the products used to create stereoscopic images, noting such milestones as David Brewster's and Oliver Wendell Holmes's work with stereoscopes, the use of polarizing image selection, and the success of twin-strip 3-D films, among others. In addition, Zone looks at the films produced up to 1952, discussing public reception of early 3-D short films as well as longer features such as *Power of Love* in single-strip anaglyphic projection in 1922 and Semyon Ivanov's 1941 autostereoscope *Robinson Crusoe*. He integrates his examination of the evolution of 3-D film with other cinematic developments, demonstrating the connection between stereoscopic motion pictures and modern film production. *Stereoscopic Cinema and the Origins of 3-D Film, 1838--1952*, is an exhaustive study of not only the evolution of 3-D technology and the subsequent filmmaking achievements but also the public response to and cultural impact of 3-D movies. Zone takes the reader on a voyage of discovery into the rich history of a field that predates photography and that continues to influence television and computer animation today.

Each of these thirty-seven new projects is true origami-folded from a single piece of paper with no cutting or gluing-and is complete with clear step-by-step diagrams, instructions, and a photograph of the finished model. *Origami Zoo* will challenge and delight anyone with a penchant for creating something wonderful out of (almost) nothing.
