Heather and Homicide Molly MacRae, 2020-12-01 The new novel in the acclaimed Highland Bookshop mystery series finds a true-crime author murdered in the charming seacoast town of Inversgail—can the women of Yon Bonnie Books discover the killer’s identity before he or she strikes again? True crime writer Heather Kilbride arrives in the seacoast town of Inversgail, Scotland, to research a recent murder for her new book. But if that’s true, why does she seem more interested in William Clark, a shadowy lawyer with no connection to the murder? Her nosy questions arouse the suspicions of Constable Hobbs, the members of a local writers’ group, and Janet Marsh and her crew of amateur sleuths at Yon Bonnie Books. Heather’s unconventional research methods prove deadly when Janet discovers her lifeless body. Except the “body” turns out to be a dummy dressed-up to look like Heather. Meanwhile, Heather is sitting at a safe distance observing Janet’s reactions. Then Heather is found dead—again—sprawled at the base of an ancient standing stone; and this time it’s for real. Clutched in her hand is a valuable miniature book last seen at Yon Bonnie Books, and now the police want to know how Heather, the miniature book, and Janet are all connected. But Janet and her group of sleuths have two questions of their own: Who else is interested in knowing that connection—and is that person a cold-blooded killer?

Personal Fabrication Patrick Baudisch, Stefanie Mueller, 2017-05-08 While fabrication technologies have been in use in industry for several decades, expiring patents have recently allowed the technology to spill over to technology-enthusiastic makers. *Personal Fabrication* looks at the massive, disruptive changes that are likely to be seen in interactive computing, as well as to computing as a whole. It discusses six main challenges that need to be addressed for this change to take place, and explains researchers in HCI will play a key role in tackling these challenges.

Micromechanics of Composite Materials Jacob Aboudi, Steven M. Arnold, Brett A. Bednarczyk, 2012-11 Summary: A Generalized Multiscale Analysis Approach brings together comprehensive background information on the multiscale nature of the composite, constituent material behaviour, damage models and key techniques for multiscale modelling, as well as presenting the findings and methods, developed over a lifetime's research, of three leading experts in the field. The

unified approach presented in the book for conducting multiscale analysis and design of conventional and smart composite materials is also applicable for structures with complete linear and nonlinear material behavior, with numerous applications provided to illustrate use. Modeling composite behaviour is a key challenge in research and industry; when done efficiently and reliably it can save money, decrease time to market with new innovations and prevent component failure.

The Virtual Crack Closure Technique: History, Approach and Applications Ronald Krueger, 2002

An overview of the virtual crack closure technique is presented. The approach used is discussed, the history summarized, and insight into its applications provided. Equations for two-dimensional quadrilateral elements with linear and quadratic shape functions are given. Formula for applying the technique in conjunction with three-dimensional solid elements as well as plate/shell elements are also provided. Necessary modifications for the use of the method with geometrically nonlinear finite element analysis and corrections required for elements at the crack tip with different lengths and widths are discussed. The problems associated with cracks or delaminations propagating between different materials are mentioned briefly, as well as a strategy to minimize these problems. Due to an increased interest in using a fracture mechanics based approach to assess the damage tolerance of composite structures in the design phase and during certification, the engineering problems selected as examples and given as references focus on the application of the technique to components made of composite materials.

Twelve Years a Slave Solomon Northup, 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a

'Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

The Architecture of the Jumping Universe Charles Jencks, 1997-06-02 Charles Jencks has the uncanny capacity to announce a new movement in architecture before it has begun. With Post-Modernism, he was looking to the past. Now, for the first time, with his new book on morphogenesis he is taking a look at the future. There is no question that his argument will have an important critical effect on architecture at the beginning of the new millennium. Peter Eisenman. Architect A new paradigm is sweeping through science, changing both our view of the universe and of mankind. Charles Jencks is one of a handful of thinkers with the courage to embrace the emerging paradigm and interpret it architecturally. This inspired synthesis of art, design, science and philosophy charts a bold new course not only for architecture, but for Post-Modern thought. Paul Davies, Professor of Natural Philosophy, University of Adelaide, author of The Cosmic Blueprint, Superforce, The Mind of God and other books on contemporary science. Who else could have written a book that opens up

such cosmic perspectives and still make such neat, sharply focused comments on particular architects and particular styles of architecture? Who else could range with such zest, ease and elegance from Chaos to Bruce Goff, from Coleridge to Frank Gehry, from Complexity Theory to Green Buildings? The old question of in which style should we build can never be addressed in the same way again. Charles Jencks has brought purpose back into architecture. His teleology may transcend what architects are used to, but Jencks manages to make far more sense out of our contemporary architectural dilemmas than practically all the other books in the RIBA book shop. The Landscape of Contemporary Infrastructure Marcel Smets, Kelly Shannon, 2016 Around the globe the importance of infrastructure as the motor of economic development rising owing to increasing mobility and the need to make urban territories accessible. As a result, infrastructure

networks are among the most complex and significant design tasks today. This book investigates how the design of infrastructure actively influences the organization of the inhabited landscape. Works of infrastructure are analyzed as footprints of civilization, as physical presence, as transformers of perception, and as new vessels of collective life. The authors identify these characteristics, together with the conditions that influence them, and suggest a typology of design attitudes as revealed in recent practice around the world. Each chapter is illustrated with key works by some of the world's most inspiring designers, including Vito Acconci, Paul Andreu, Bentham Crouwel, Dietmar Feichtinger, Diller Scofidio + Renfro, Terry Farrell, Norman Foster, Nicholas Grimshaw, Antoine Grumbach, Zaha Hadid, Arata Isozaki, Bruno Mader, Maxwan, Montgomery Sisam, OMA, Tonkin Zulaikha Greer, UN Studio, and Zwarts & Jansma. The authors demonstrate how the combined creative potential of architecture, landscape architecture, and urban design is essential to putting into place an efficient, modern infrastructure. The result is an indispensable instrument for everyone involved in the design of infrastructure, and for all observers of the contemporary city. --

Lamination Charles Osheku, 2018-03-21 The field of lamination has developed significantly over the past 5000 years. Nowadays, we have a humongous array of structures and technological systems where composite laminates are applied. From the viewpoint of structural mechanics, an interface slip motion between two laminated structures, such as beam plate and plate in the presence of dry friction, can be utilized for slip damping systems. By scientific definition, slip damping is a mechanism exploited for dissipating noise and vibration energy in machine structures and systems. Researchers have developed several mathematical models for noise dissipation, minimization and complete vibration isolation laminated mechanisms. The purpose of this book is to describe new concepts of producing laminated structures and possible modern engineering applications.
