Designing the T-34 Peter Samsonov,2019-12-27 When the German army launched Operation Barbarossa – the invasion of the Soviet Union – on June 22, 1941, it was expecting to face and easily defeat outdated and obsolete tanks and for the most part it did, but it also received a nasty shock when it came up against the T-34. With its powerful gun and sloped armour, the T-34 was more than a match for the best German tanks at that time and the Germans regarded it with awe. German Field Marshal von Kleist, who commanded the latter stages of Barbarossa, called it “the finest tank in the world”. Using original wartime documents author and historian Peter Samsonov, creator of the Tank Archives blog, explains how the Soviets came to develop what was arguably the war’s most revolutionary tank design.

Sherman Tanks of the Red Army Peter Samsonov,2020-12-21 More than 4000 examples of the famous diesel-fueled M4A2 Sherman tank were sent to the Soviet Union during the Second World War under the Lead-Lease program. These American-built vehicles were operated by Red Army crews against the Germans during some of the bitterest fighting on the Eastern Front - yet despite serving with distinction and being well-liked by their crews, relatively little has been written about these vehicles until now. Tank expert Peter Samsonov looks at the origins of the M4A2 in Soviet service and the machines that were received from the US as well as providing a detailed assessment of how they fared in combat on the front line.

Soil pollution: a hidden reality Food and Agriculture Organization of the United Nations,2018-04-30 This document presents key messages and the state-of-the-art of soil pollution, its implications on food safety and human health. It aims to set the basis for further discussion during the forthcoming Global Symposium on Soil Pollution (GSOP18), to be held at FAO HQ from May 2nd to 4th 2018. The publication has been reviewed by the Intergovernmental Technical Panel on Soil (ITPS) and contributing authors. It addresses scientific evidences on soil pollution and highlights the need to assess the extent of soil pollution globally in order to achieve food safety and sustainable development. This is linked to FAO’s strategic objectives, especially S01, S02, S04 and S05 because of the crucial role of soils to ensure effective nutrient cycling to produce nutritious and safe food, reduce atmospheric CO2 and N2O concentrations and thus mitigate climate change, develop sustainable soil management practices that enhance agricultural resilience to extreme climate events by reducing soil degradation processes. This document will be a reference material for those interested in learning more about sources and effects of soil pollution.

Tank Warfare on the Eastern Front, 1941–1942 Robert Forczyk,2014-02-24 The author of Case White: The Invasion of

Poland delves into the strategy and weaponry of armored warfare during the early years of the Russo-German War. The German panzer armies that swept into the Soviet Union in 1941 were an undefeated force that had honed their skill in combined arms warfare to a fine edge. The Germans focused their panzers and tactical air support at points on the battlefield defined as Schwerpunkt—main effort—to smash through any defensive line and then advance to envelope their adversaries. Initially, these methods worked well in the early days of Operation Barbarossa and the tank forces of the Red Army suffered defeat after defeat. Although badly mauled in the opening battles, the Red Army's tank forces did not succumb to the German armored onslaught and German planning and logistical deficiencies led to over-extension and failure in 1941. In the second year of the invasion, the Germans directed their Schwerpunkt toward the Volga and the Caucasus and again achieved some degree of success, but the Red Army had grown much stronger and by November 1942, the Soviets were able to turn the tables at Stalingrad. Robert Forczyk's incisive study offers fresh insight into how the two most powerful mechanized armies of the Second World War developed their tactics and weaponry during the critical early years of the Russo-German War. He uses German, Russian and English sources to provide the first comprehensive overview and analysis of armored warfare from the German and Soviet perspectives. His analysis of the greatest tank war in history is compelling reading. Includes photos

T-34 Shock: The Soviet Legend in Pictures Francis Pulham, Will Kerrs, 2021-07-11 The Soviet T\34 medium tank needs no introduction, being the most famous tank ever built especially as has seen service across the globe throughout the twentieth century's most brutal wars. However, despite this fame, little has been written about its design changes. While most tank enthusiasts can differentiate between the 'T\34\76' and the 'T\34\85', identifying different factory production batches has proven more elusive. Until now. With nearly six hundred photographs, mostly taken by soldiers who both operated and fought against the T\34, this book seeks to catalogue and contextualise even the subtlest details to create a true 'T\34 continuum'. The book begins with the antecedents of the T\34, the ill-fated BT 'fast tank' series and the influence of the traumatic Spanish Civil War before moving to an in-depth look at the T\34's prototypes. After this, every factory production change is catalogued and contextualised, with never-before-seen photographs and stunning technical drawings. Furthermore, four battle stories are also integrated to explain the changing battle context when major production changes take place. The production story is completed with sections on the T\34's post-war production (and modification) by Czechoslovakia, Poland, and the People's Republic of China, as well as T\34 variants.

Innovative Wastewater Treatment & Resource Recovery Technologies: Impacts on Energy, Economy and Environment
Juan M. Lema, Sonia Suarez Martinez, 2017-06-15 This book introduces the 3R concept applied to wastewater treatment and resource recovery under a double perspective. Firstly, it deals with innovative technologies leading to: Reducing energy requirements, space and impacts; Reusing water and sludge of sufficient quality; and Recovering

resources such as energy, nutrients, metals and chemicals, including biopolymers. Besides targeting effective C,N&P removal, other issues such as organic micropollutants, gases and odours emissions are considered. Most of the technologies analysed have been tested at pilot- or at full-scale. Tools and methods for their Economic, Environmental, Legal and Social impact assessment are described. The 3R concept is also applied to Innovative Processes design, considering different levels of innovation: Retrofitting, where novel units are included in more conventional processes; Re-Thinking, which implies a substantial flowsheet modification; and Re-Imagining, with completely new conceptions. Tools are presented for Modelling, Optimising and Selecting the most suitable plant layout for each particular scenario from a holistic technical, economic and environmental point of view.

Armored Champion Steven Zaloga,2015-05-15 Armor expert Zaloga enters the battle over the best tanks of World War II with this heavy-caliber blast of a book armed with more than forty years of research. • Provocative but fact-based rankings of the tanks that fought the Second World War • Breaks the war into eight periods and declares Tanker's Choice and Commander's Choice for each • Champions include the German Panzer IV and Tiger, Soviet T-34, American Pershing, and a few surprises • Compares tanks' firepower, armor protection, and mobility as well as dependability, affordability, tactics, training, and overall combat performance • Relies on extensive documentation from archives, government studies, and published sources—much of which has never been published in English before • Supported by dozens of charts and diagrams and hundreds of photos

Data Intelligence and Cognitive Informatics I. Jeena Jacob,Selvanayagi Kolandapalayam Shanmugam,Selwyn Piramuthu,Przemyslaw Falkowski-Gilski,2021-01-08 This book discusses new cognitive informatics tools, algorithms and methods that mimic the mechanisms of the human brain which lead to an impending revolution in understating a large amount of data generated by various smart applications. The book is a collection of peer-reviewed best selected research papers presented at the International Conference on Data Intelligence and Cognitive Informatics (ICDICI 2020), organized by SCAD College of Engineering and Technology, Tirunelveli, India, during 8–9 July 2020. The book includes novel work in data intelligence domain which combines with the increasing efforts of artificial intelligence, machine learning, deep learning and cognitive science to study and develop a deeper understanding of the information processing systems.

Proceedings of 2nd International Conference on Communication, Computing and Networking C. Rama Krishna,Maitreyee Dutta,Rakesh Kumar,2018-09-07 The book provides insights from the 2nd International Conference on Communication, Computing and Networking organized by the Department of Computer Science and Engineering, National Institute of Technical Teachers Training and Research, Chandigarh, India on March 29–30, 2018. The book includes contributions in which researchers, engineers, and academicians as well as industrial professionals from around the globe presented their research findings and development activities in the field of Computing Technologies, Wireless Networks, Information Security, Image Processing and Data Science. The book provides opportunities for the readers to explore the literature, identify gaps in the existing works and propose new ideas for research.

Panzer Operations Erhard Raus,Steven H. Newton,2009-04-28 Drawing from post-war reports commissioned by U.S.

Army intelligence, World War II historian Steven H. Newton has translated, compiled, and edited the battle accounts of one of Germany's finest panzer commanders and a skilled tactician of tank warfare. Throughout most of the war, Erhard Raus was a highly respected field commander in the German-Soviet war on the eastern front, and after the war he wrote an insightful analysis of German strategy in that campaign. The Raus memoir covers the Russian campaign from the first day of the war to his relief from command at Hitler's order in the spring of 1945. It includes a detailed examination of the 6th Panzer Division's drive to Leningrad, Raus's own experiences in the Soviet winter counteroffensive around Moscow, the unsuccessful attempt to relieve Stalingrad, and the final desperate battles inside Germany at the end of the war. His battlefield experience and keen tactical eye make his memoir especially valuable for scholars, and his narrative is as readable as Heinz Guderian's celebrated Panzer Leader.

Agriculture Digitalization and Organic Production Andrey Ronzhin, Karsten Berns, Alexander Kostyaev, 2021-08-19
This book features selected papers presented at the First International Conference on Agriculture Digitalization and Organic Production (ADOP 2021), held in St. Petersburg, Russia, on June 07–09, 2021. The contributions, written by professionals, researchers and students, cover topics in the field of agriculture, biology, robotics, information technology and economics for solving urgent problems in digitalization of organic livestock and crop production. The conference is organized by the St. Petersburg Federal Research Center of the Russian Academy of Sciences (SPC RAS) and the Technische Universität Kaiserslautern. The book will be useful to researchers of interdisciplinary issues of digitalization and robotization of agricultural production, as well as farmers and commercial companies, which introduce new technologies in crop production and animal husbandry. The book also covers a range of issues related to scientific training of graduate students in the areas of Mechatronics and robotics, Control in technical systems and Technologies, means mechanization and energy equipment in rural, forestry and fisheries”.

Bats in the Anthropocene: Conservation of Bats in a Changing World Christian C. Voigt, Tigga Kingston, 2015-12-07
This book focuses on central themes related to the conservation of bats. It details their response to land-use change and management practices, intensified urbanization and roost disturbance and loss. Increasing interactions between humans and bats as a result of hunting, disease relationships, occupation of human dwellings, and conflict over fruit crops are explored in depth. Finally, contributors highlight the roles that taxonomy, conservation networks and conservation psychology have to play in conserving this imperilled but vital taxon. With over 1300 species, bats are the second largest order of mammals, yet as the Anthropocene dawns, bat populations around the world are in decline. Greater understanding of the anthropogenic drivers of this decline and exploration of possible mitigation measures are urgently needed if we are to retain global bat diversity in the coming decades. This book brings together teams of international experts to provide a global review of current understanding and recommend directions for future research and mitigation.

Hitler's Panzers East R.H.S. Stolfi, 2014-11-20 How close did Germany come to winning World War II? Did Hitler throw away victory in Europe after his troops had crushed the Soviet field armies defending Moscow by August 1941? R.H.S. Stolfi offers a dramatic new picture of Hitler's conduct in World War II and a fundamental reinterpretation of the course of the war. Adolf Hitler generally is thought to have been driven by a blitzkrieg mentality in the years 1939 to 1941. In fact, Stolfi argues, he had no such outlook on the war. From the day Britain and France declared war, Hitler reacted with a profoundly conservative cast of mind and pursued a circumscribed strategy, pushing out siege lines set around Germany by the Allies. Interpreting Hitler as a siege Führer explain his apparent aberrations in connection with Dunkirk, his fixation on the seizure of Leningrad, and his fateful decision in the summer of 1941 to deflect Army Group Center into the Ukraine when both Moscow and victory in World War II were within its reach. Unaware of Hitler's siege orientation, the German Army planned blitz campaigns. Through daring operational concepts and bold tactics, the army won victories over several Allied powers in World War II, and these led to the great campaign against the Soviet Union in summer of 1941. Stolfi postulates that in August 1941, German Army Group Center had the strength both to destroy the Red field armies defending the Soviet capital and to advance to Moscow and beyond. The defeat of the Soviet Union would have assured victory in World War II. Nevertheless, Hitler ordered the army group south to secure the resources of the Ukraine against a potential siege. And a virtually assured German victory slipped away. This radical reinterpretation of Hitler and the capabilities of the German Army leads to a reevaluation of World War II, in which the lesson to be learned is not how the Allies won the war, but how close the Germans came to a quick and decisive victory? long before the United States was drawn into the battle.

IS-2 Heavy Tank 1944–73 Steven J. Zaloga, 2011-10-20 The Iosef Stalin tanks were the ultimate heavy tanks developed by the Soviet Union and were popularly called 'Victory tanks' due to their close association with the defeat of Germany in 1945. Yet in spite of their reputation, the Stalin tanks emerged from a troubled design, had a brief moment of glory in 1944 and 1945, and disappeared in ignominy after 1960. This title covers the events contributing to the Soviet Union's need to design the new series, with particular reference to the unsuccessful KV series and the advent of a new generation of heavy German tanks including the Tiger. It also covers their development, operational history and myriad variants.

Flotation Technology Lawrence K. Wang, Nazih K. Shammash, William A. Selke, Donald B. Aulenbach, 2010-06-09 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution – air, water, soil, and noise. Since pollution is a direct or indirect consequence of waste, the seemingly idealistic demand for “zero discharge” can be construed as an unrealistic demand for zero waste. However, as long as waste continues to exist, we can only attempt to abate the subsequent pollution by converting it to a less noxious form. Three major questions usually arise when a particular type of pollution has been identified: (1) How serious is the pollution? (2) Is the technology to abate it available? and (3) Do the costs of abatement justify the degree of abatement achieved? This

book is one of the volumes of the Handbook of Environmental Engineering series. The principal intention of this series is to help readers formulate answers to the last two questions above. The traditional approach of applying tried-and-true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a "methodology of pollution control." However, the realization of the ever-increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken.

Industrial Entomology Omkar, 2017-02-13 This book is a compilation of writings focused on conventional and unconventional insect products. Some of these products are commercial successes, while others are waiting to be launched and are the potential produce of the future. In addition to the well known products honey, mulberry silk, and lac, the book primarily concentrates on silk producing insects other than the mulberry silkworm, insects as food, as sources of medicines, pest and weed managers, and as pollinators. The book highlights the all pervasive role of insects in improving human lives at multiple levels. Accordingly, while most books on insects concentrate on how to limit growth in their population, it instead focuses on how to propagate them. In each chapter, the book brings to the fore how insects are far more beneficial to us than their well publicised harmful roles. This book approaches both unconventional and conventional insect products, such as honey, silk and lac in much more depth than the available literature. It investigates different aspects of the production of these insects, such as the related processes, problems and utilities, in dedicated chapters. Because this book deals with the production of insects or their produce, it has been named Industrial Entomology, perhaps the only book that truly reveals the tremendous potential of insects to help humans live better lives. Based on the research and working experience of the contributors, who are global experts in their respective fields, it provides authentic, authoritative and updated information on these topics. The book offers a unique guide for students, teachers, policy planners, small scale industrialists, and government ministries of agriculture and industry across the globe. It will provide a much required stimulus to insect appreciation and generate enthusiasm for research and the broader acceptance for insect produce. Hopefully, it will also present the Indian perspective on these topics to a global readership.
