Anthony Tucker-Jones

Tiger I & Tiger II Anthony Tucker-Jones,2013-07-17 A pictorial history and analysis of the infamous World War II German tanks. The German Tiger I and Tiger II (known to the Allies as the King Tiger or Royal Tiger) were the most famous and formidable heavy tanks of the Second World War. In their day, their awesome reputation inspired such apprehension among Allied soldiers that the weaknesses of these brilliant but flawed designs tended to be overlooked. Anthony Tucker-Jones, in this illustrated history, tells the story of their conception and development and reconsiders their operational history, and he dispels the myths that have grown up around them. The Tigers were over-engineered, required raw materials that were in short supply, and were time-consuming to manufacture and difficult to recover from the battlefield. Only around 1,300 of the Tiger I and fewer than 500 of the Tiger II were produced, so they were never going to make anything more than a local impact on the outcome of the fighting on the Western and Eastern fronts. Yet the myth of the Tigers, with their 88mm guns, thick armor, and brutal profiles, has grown over time to the extent that they are regarded as the deadliest tanks of the Second World War. Anthony Tucker-Jones's expert account of these remarkable fighting vehicles is accompanied by a series of color plates showing the main variants of the designs and the common ancillary equipment and unit markings. His book is an essential work of reference for enthusiasts.

Japan at War 1931-45 David McCormack,2017-01-20

Japanese Tanks and Armoured Warfare 1932-45 David McCormack,2021-02-19 This new history charts the development, production, deployment, and combat operations of Japan's tank forces between their inception in 1918 and their disbandment in 1945. The author's persuasive arguments encourage the reader to reappraise their existing views concerning the contribution of Japanese tanks towards the projection of combat power.

Forgotten Tanks and Guns of the 1920s, 1930s and 1940s David Lister,Paul Charlton,2018-10-30 History forgets. Files are lost and mislaid. But this book seeks to shine a light, offering a collection of cutting edge pieces of historical research detailing some of the most fascinating arms and armament projects from the 1920s to the end of the 1940s, nearly all of which had previously been lost to history.Included here are records from the UKs MI10 (the forerunner of GCHQ) which tell the story of the mighty Japanese heavy tanks and their service during the Second World War. Other chapters expand on the development of British armour, including the story of infantry tanks from the 1920s right through to the end of the Second World War and beyond.Other items placed beneath the microscope in this fascinating history include a wide variety of guns, rocket launchers, super heavy tanks and countless pieces of specialised armour. Previously overlooked, hidden under layers of dust in archives up and down the country, the histories of these objects has finally been uncovered.

Sherman Tanks of the Red Army Peter Samsonov,2020-12-21 More than 4000 examples of the famous diesel-fueled M4A2 Sherman tank were sent to the Soviet Union during the Second World War under the Lead-Lease program. These American-built vehicles were operated by Red Army crews against the Germans during some of the bitterest fighting on the Eastern Front - yet despite serving with distinction and being well-liked by their crews, relatively little has been written about these vehicles until now. Tank expert Peter Samsonov looks at the origins of the M4A2 in Soviet service and the machines that were received from the US as well as providing a detailed assessment of how they fared in combat on the front line.

Japanese Tanks and Armoured Warfare 1932-1945 David McCormack ,2021-03-13 The popular image of the Japanese tanks which faced the markedly superior tanks fielded by the Allies during the Second World War is one of poorly armed and armoured Lilliputian tin cans which failed to make any impression upon the battlefield. In this absorbing new history, David McCormack looks beyond widely held and unchallenged misconceptions to create a new narrative in which Japan's rightful place as a leading innovator in tank design and doctrine is restored. Why did Japan produce tanks in such limited numbers? What contribution did Japanese tanks make to the war effort? Why did it take Japan so long to develop heavier tanks capable of meeting the Allies on more equal terms? Drawing from primary and secondary sources, the author's meticulous research provides the reader with an objective appraisal of both the successes and failures of the Empire of the Sun's tank forces.

The Eastern Fleet and the Indian Ocean, 1942–1944 Charles Stephenson,2022-04-06 A study of the British Royal Navy's activities in the Indian Ocean during World War II, led by Admiral Sir James Somerville. The story of the British Eastern Fleet, which operated in the Indian Ocean against Japan, has rarely been told. Although it was the largest fleet deployed by the Royal Navy prior to 1945 and played a vital part in the theatre it was sent to protect, it has no place in the popular consciousness of the naval history of the Second World War. So Charles Stephenson's deeply researched and absorbing narrative gives this forgotten fleet the recognition it deserves. British pre-war naval planning for the Far East is part of the story, as is the disastrous loss of the battleship Prince of Wales and battlecruiser Repulse in 1941, but the body of the book focuses on the new fleet, commanded by Admiral Sir James Somerville, and its operations against the Japanese navy and aircraft as well as Japanese and German submarines. Later in the war, once the fleet had been reinforced with an American aircraft carrier, it was strong enough to take more aggressive actions against the Japanese, and these are described in vivid detail. Charles Stephenson's authoritative study should appeal to readers who have a special interest in the war with Japan, in naval history more generally and Royal Navy in particular. Praise forThe Eastern Fleet and the Indian Ocean, 1942–1944 “This meticulously researched, outstandingly clear, well written and absorbing account is long overdue and will most likely become a standard work. The text is most helpfully supported by over 80 pages of detailed end notes referenced to each chapter and a detailed index. This is not only a book for naval historians but also for anyone with an interest in the War in the Indian Ocean region. Highly recommended.” —Military Historical Society “I enjoyed this book – it gives us an account of an often neglected part of the war at sea, and of the achievements of Admiral Somerville, who kept his fleet intact in the face of a potentially overwhelming opponent, then was willing to acknowledge that his fleet needed to improve massively before it could take on the Japanese.” —Dr John Rickard, author and webmaster of the ‘Military History Encyclopedia on the Web’

The Anglo-Boer War in 100 Objects War Museum of the Boer Republics,2017-02 The Anglo-Boer War in 100 Objects brings the victories and the tragedies, the full extent of the human drama behind this war to life through 100 iconic artefacts. While a Mafeking siege note helps to illustrate the acute shortages caused by the siege, a spade used by a Scottish soldier at Magersfontein and the boots of a Boer soldier who died at Spion Kop tell of the severity of some of the famous battles. The book follows the course of the war but also highlights specific themes, such as British and Boer weaponry, medical services, POW camps, as well as major role-players on both sides. The text is interspersed with striking historical images from the museums photographic collection. A further 200 secondary objects have been included to help tell the story of a conflict that left an indelible mark on the South African landscape.

Sōryū-, Hiryū-, and Unryū-Class Aircraft Carriers Lars Ahlberg,Hans Lengerer,2020-11-28 This book covers the design and construction of the two well-known Sōryū and Hiryū carriers, and the lesser-known ships of the Unryū class, and relies on original Japanese source material, including numerous photos, drawings, and specifications. How and why the Japanese designed and constructed the WWII-era, medium-sized Sōryū-, Hiryū-, and Unryū-class aircraft carriers, and how they were operated, is covered in detail. The Imperial Japanese Navy planned the construction of 45 aircraft carriers from 1918 to 1943 and commissioned twenty-five of them between 1922 and 1944. These types were large, medium, and small aircraft carriers, with some converted from other warship classes, and escort aircraft carriers remodeled from passenger ships. The medium type presented here formed the majority, with a total of 18 planned: five were completed, three remained in various completion stages at the end of the Pacific War, and ten were eventually canceled.
