Introduction to UAV Systems Paul G. Fahlstrom, Thomas J. Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

**Spaceport Earth** Joe Pappalardo, 2019-03-26 "Tackles the ever-changing, twenty-first-century space industry and what privately funded projects like Elon Musk's SpaceX mean for the future of space travel." –Foreign Policy Creating a seismic shift in today's space industry, private sector companies including Elon Musk's SpaceX and Jeff Bezos's Blue Origin are building a dizzying array of new spacecraft and rockets, not just for government use, but for any paying customer. At the heart of this space revolution are spaceports, the center and literal launching pads of spaceflight. Spaceports cost hundreds of millions of dollars, face extreme competition, and host operations that do not tolerate failures—which can often be fatal. Aerospace journalist Joe Pappalardo has witnessed space rocket launches around the world, from the jungle of French Guiana to the coastline of California. In his comprehensive work Spaceport Earth, Pappalardo describes the rise of private companies and how they are reshaping the way the world is using space for industry and science. Spaceport Earth is a travelogue through modern space history as it is being made, offering space enthusiasts, futurists, and technology buffs a close perspective of rockets and launch sites, and chronicling the stories of industrial titans, engineers, government officials, billionaires, schemers, and politicians who are redefining what it means for humans to be a spacefaring species. "Private companies and rich people like Elon Musk and Jeff Bezos have taken over the exploration of space. Pappalardo explores this new sort of spacefaring at the outer reaches of business and technology." –The New York Times "For anyone obsessed with how spaceflight grew into what it is today, this book is a must-have."

*Nieuport Aircraft of World War One* Ray Sanger, 2002 The French firm of Nieuport built some of the most numerous, best-looking and effective fighting planes of World War I -- they type 17 and 29 gaining particular fame. Ray Sanger's authoritative book covers all these aircraft in detail, paying attention to both the technical detail and operational use. Illustrated throughout with rare photographs this will be an indispensable volume for any World War I aviation library.

*Aerodynamics for Naval Aviators* H. H. Hurt Jr., Federal Aviation Administration, 2012 *Aerodynamics for Naval Aviators* is the traditional text for Navy pilots. Also used by the U.S. Air Force, it remains the definitive work on applied aerodynamics for pilots. It effectively communicates the intricacies of aerodynamics in an accessible manner, and includes charts, illustrations, and diagrams to aid in understanding. This text is reader-friendly and great for any serious beginner as well as any experienced pilot, and is the definitive source on aerodynamic and engineering theory as they apply to flight operations.

**Soviet X-planes** Gordon Yefim, E. Gordon, Bill Gunston, 2000 This is the first book to collect stories of the most important Soviet aircraft, including experimental machines from the early 1900s through to the latest Russian prototypes of today. About 150 types are described, each with data and many with extensive drawings.

**The White Rose of Stalingrad** Bill Yenne, 2013-02-20 Of all the major air forces that were engaged in the war, only the Red Air Force had units comprised specifically of women. Initially the Red Air Force maintained an all-male policy among its combat pilots. However, as the apparently invincible German juggernaut sliced through Soviet defenses, the Red Air Force began to rethink its ban on women. By October 1941, authorization was forthcoming for three ground attack regiments of women pilots. Among these women, Lidiya Vladimirovna "Lilya" Litvyak soon emerged as a rising star. She shot down five German aircraft over the Stalingrad Front, and thus became history's first female ace. She scored 12 documented victories over German aircraft between September 1942 and July 1943. She also had many victories shared with other pilots, bringing her possible total to around 20. The fact that she was a 21-year-old woman ace was not lost on the hero-hungry Soviet media, and soon this colourful character, whom the Germans dubbed "The White Rose of Stalingrad," became both folk heroine and martyr.

*Postwar Aircraft* Jerry Scutts, 2000-10-27 Postwar military aviation is dominated by the multi-role jet aircraft. This book looks at military jets from the F-86 Sabre of the Korean War through to the Tornados and F-18s of today

and the key issues associated with accurate detailing, markings and camouflage schemes.

**Japanese Aircraft of the Pacific War** René J. Francillon, 1987-02 The most significant types of aircraft operated by the Army and the Navy immediately before and during the Pacific War are described in the two main sections of this book, while a series of appendices provides information on less important Japanese military aircraft, foreign-designed aircraft operated by Japanese forces, aircraft carriers and tenders, aero-engines and aircraft armament.

**Airborne Warfare** James Maurice Gavin, 2020-04-13 To every member of the 82nd Airborne Division who dropped as part of the American paratroop landings during World War Two, they breathed a little easier knowing their commander Jumpin' Jim Gavin would be jumping with them. General Gavin's paratroops drop-landed and fought in Sicily, Normandy on D-Day and during the abortive attempt to capture the Rhine bridges during Operation Market-Garden. He shared the risks of all his men parachuting into enemy territory, often only armed with his GI issue rifle. His memoirs are an outstanding addition to the literature of the Airborne in World War II.
