The Customer Centric Enterprise Mitchell M. Tseng, Frank Piller, 2011-06-27 Companies are being forced to react to the growing individualization of demand. At the same time, cost management remains of paramount importance due to the competitive pressure in global markets. Thus, making enterprises more customer centric efficiently is a top management priority in most industries. Mass customization and personalization are key strategies to meet this challenge. Companies like Procter&Gamble, Lego, Nike, Adidas, Land's End, BMW, or Levi Strauss, among others, have started large-scale mass customization programs. This book provides insight into the different aspects of building a customer centric enterprise. Following an interdisciplinary approach, leading scientists and practitioners share their findings, concepts, and strategies from the perspective of design, production engineering, logistics, technology and innovation management, customer behavior, as well as marketing.

The Role of Corporate Sustainability in Asian Development Gilbert Lenssen, Jay Hyuk Rhee, Fabien Martinez, 2017-05-11 This book examines the challenges faced by seven multinational companies - Intel, Lenovo, Samsung Electronics, ZTE, BMW Hyundai Motor Company, Mahindra and Mahindra - in their endeavour to contribute to the economic, environmental and social development of Asia. The lessons learned from the examination of these business practices may directly contribute to an increase in the practice of sustainable management and may as such contribute to positive economic, environmental and

social impact of companies in this region. The cases are highly relevant for management theoreticians seeking to deepen our understanding of corporate sustainability in an area where scholars, practitioners and policy-makers can expect new questions, problems and challenges in the years ahead. The book is also of high interest to policy review agencies, policy makers and welfare economists seeking to support the development of a comprehensive sustainability framework for managing social and environmental issues in the context of Asia.

Assessment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Light-Duty Vehicle Fuel Economy, 2011-06-03 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption-the amount of fuel consumed in a given

driving distance-because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Fuel Economy of Light-Duty Vehicles, Phase 2, 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and

will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Soft Like Thunder - Special Edition Julia Wolf, 2022-01-10 ***The is a discreet/special edition cover of Soft Like Thunder with special interior formatting*** Helen. What a sweet name for a girl who is anything but. The first time I laid eyes on Theo Whitlock, I chased him and his frat boy friends with a bat. I'm no white knight. I'm broke. He's rich. I destroyed his car. He chooses not to rat me out. I was never supposed to go to college, but especially not one like Savage U, where only the wealthiest need apply. One might call this a lucky break, only I don't feel so lucky with a drug dealer breathing down my neck, and a gangster threatening to burn my house down. You have a face that could launch a thousand ships. Theo and I don't make sense, but being with him feels good, and I need more than my books and classes to distract me from the chaos and violence in my life. I know you're my good girl. Aren't you, Helen? Tell me. We're casual. No complications. We have to be. I'm keeping secrets, and I have a feeling behind Theo

Whitlock's twinkly blue eyes is a whole world of darkness. Do you think about me? Too much... Did I hurt you? He will...if the other savages don't get to me first.

Materials, Design and Manufacturing for Lightweight Vehicles P K Mallick, 2010-03-01 Research into the manufacture of lightweight automobiles is driven by the need to reduce fuel consumption to preserve dwindling hydrocarbon resources without compromising other attributes such as safety, performance, recyclability and cost. Materials, design and manufacturing for lightweight vehicles will make it easier for engineers to not only learn about the materials being considered for lightweight automobiles, but also to compare their characteristics and properties. Part one discusses materials for lightweight automotive structures with chapters on advanced steels for lightweight automotive structures, aluminium alloys, magnesium alloys for lightweight powertrains and automotive structures, thermoplastics and thermoplastic matrix composites and thermoset matrix composites for lightweight automotive structures. Part two reviews manufacturing and design of lightweight automotive structures covering topics such as manufacturing processes for light alloys, joining for lightweight vehicles, recycling and lifecycle issues and crashworthiness design for lightweight vehicles. With its distinguished editor and renowned team of contributors, Materials, design and manufacturing for lightweight vehicles is a standard reference for practicing engineers involved in the design and material selection for motor vehicle bodies and components

as well as material scientists, environmental scientists, policy makers, car companies and automotive component manufacturers. Provides a comprehensive analysis of the materials being used for the manufacture of lightweight vehicles whilst comparing characteristics and properties Examines crashworthiness design issues for lightweight vehicles and further emphasises the development of lightweight vehicles without compromising safety considerations and performance Explores the manufacturing process for light alloys including metal forming processes for automotive applications

CMF Design Liliana Becerra, 2016-05-01 In this first book about the rather young discipline, the author consolidated its key principles, so that they can be consulted, referenced and utilised by both design students and professionals. Only when the perfect balance between visual beauty and functional performance is achieved, can a product provide a consistent and successful user experience. The discipline of CMF design focuses on designing and specifying colours, materials and finishes to support both functional and emotional attributes of products. The work of the CMF designer combines aesthetics and practical knowledge of materials and technologies with intangible human perceptions of value. This area of design expertise is increasingly in demand. Consumer product manufacturers have an enhanced awareness of its great potential for diversifying product portfolios at relatively low costs, while still maintaining a similar or the same product shape, functionality or tooling. It can work as a key avenue to create a sense of novelty and higher value propositions. From a marketing perspective, CMF design is a valuable tool when it comes to positioning products, collections and categories according to market tiers and consumer segmentations. Introducing the CMF process and detailing the areas of colour, material and finish design, this book serves

as a valuable source of information about this emerging professional discipline and its fundamental principles.

Mapping of lithium-ion batteries for vehicles: A study of their fate in the Nordic countries Dahllöf, Lisbeth, Romare, Mia, Wu, Alexandra, 2019-10-24 The number of electric vehicles (cars, buses, e-bikes, electric scooters and electric motorcycles) sold in the Nordic countries is currently increasing quickly. That means that more electricity is used for driving, and also that more of some important metals are being used than earlier. This report regards the fate of the lithium-ion batteries used in vehicles in the Nordic countries. Currently the “Battery Directive” (EC, 2006) which is a producer’s responsibility directive, is under revision and this study is a knowledge base intended for use by the Nordic Environmental Protection Agencies for their referral response in the revision process. This report focuses on the aspect of metal resources, but it does not elaborate on a broader range of environmental impacts, as these were outside the scope of this study.

Corvette from the Inside: The 50 Year Development History as Told by Dave McLellan Dave McLellan,2023-04-02 Corvette From the Inside is a very different kind of Corvette book. It is a guided tour through Corvette history by a man who was intimately involved with America's favorite sports car for seventeen of the most exciting years of his professional life. The challenges McLellan faced in the 70s and early 80s as he struggled to lead the Corvette program from the edge of failure to resounding success serve as a wonderfully detailed case-study in how the American automotive industry relied on the ingenuity, intellect, and pure determination of its top engineers to resurrect itself from a near-fatal slump and compete once again with Asian and European manufacturers.Dave McLellan joined General Motors in 1959, when the Corvette was only six years old. As a result, he looks at the early tale of the Corvette from a unique insider's perspective. He recounts the background of the Corvette's creation and provides fascinating insight into the Zora Arkus-Duntov years. He discusses the technical obstacles and solutions that paralleled the development of the Corvette from a primitive and poorly executed six-cylinder sporty car to one of the fastest and best handling sports cars ever conceived.Impressed by McLellan's engineering talents, GM groomed him to assume the helm at Corvette Engineering, which he did upon Duntov's retirement in 1975. McLellan stepped into the job of Corvette Chief Engineer just as the car hit an all-time performance low. He gives his first-hand account of the transition from the underpowered C3 Corvette of the mid and late 70s to the formidable C4 and ZR-1 Corvettes with which McLellan will always be identified. In

describing his experiences with the Corvette, his story traces the path of the auto industry from the dark days of the 1970s when OPEC and strangling emissions requirements took the punch out of the American muscle car, to the 1990s when the American super car-exemplified by the incredible four-cam ZR-1 Corvette-emerged as a world class competitor.
