Famines During the `Little Ice Age` (1300–1800) Dominik Collet, Maximilian Schuh, 2017-08-01 This highly interdisciplinary book studies historical famines as an interface of nature and culture. It will bring together researchers from the natural and social sciences as well as the humanities. With reference to recent interdisciplinary concepts (disaster studies, vulnerability studies, environmental history) it will examine, how the dominant opposition of natural and cultural factors can be overcome. Such an integrated approach includes the archives of nature as well as archives of man. It challenges deterministic models of human-environment interaction and replaces them with a dynamic, historicising approach. As a result it provides a fresh perspective on the entanglement of climate and culture in past societies.

Misconceptions of Risk Terje Aven, 2011-08-15 We all face risks in a variety of ways, as individuals, businesses and societies. The discipline of risk assessment and risk management is growing rapidly and there is an enormous drive for the implementation of risk assessment methods and risk management in organizations. There are great expectations that these tools provide suitable frameworks for obtaining high levels of performance and balance different concerns such as safety and costs. The analysis and management of risk are not straightforward. There are many challenges. The risk discipline is young and there are a number of ideas, perspectives and conceptions of risk out there. For example many analysts and researchers consider it appropriate to base their risk management policies on the use of expected values, which basically means that potential losses are multiplied with their associated consequences. However, the rationale for such a policy is questionable. A number of such common conceptions of risk are examined in the book, related to the risk concept, risk assessments, uncertainty analyses, risk perception, the precautionary principle, risk management and decision making under uncertainty. The Author discusses these concepts, their strengths and weaknesses, and concludes that they are often better judged as misconceptions of risk than conceptions of risk. Key Features: Discusses common conceptions of risk with supporting examples. Provides recommendations and guidance to risk analysis and risk management. Relevant for all types of applications, including engineering and business. Presents the Author's overall conclusions on the issues addressed throughout the book. All those working with risk-related problems need to understand the fundamental ideas and concepts of risk. Professionals in the field of risk, as well as researchers and graduate students will benefit from this book. Policy makers and business people will also find this book of interest.

Judging Research Martyn Rittmann, 2020-04-17 The 2019 MPDI Writing Prize invited early stage researchers who are not native English speakers to write on the subject of how research should be evaluated and how researchers should be rewarded. Six prizes were awarded, however there were many more entries. This book collates many of those entries and contains inspiring, thought-provoking and original viewpoints of open science through the eyes of those conducting research on a daily basis.

The Conservation of Ancient Marble David Rinne, 1976-01-01 This is the first publication in a projected series dealing with the care of fine artworks. In it David Rinne, a former conservator at the Getty Museum, describes common problems encountered when conserving marble objects and the appropriate treatments, beginning with the surface and progressing though to the center. The last section of the text explains elements of treatment such as disassembly, reconstruction, and the final state of the sculpture.

Design Research in Information Systems Alan Hevner, Samir Chatterjee, 2010-06-14 It is 5 years since the publication of the seminal paper on “Design Science in Information Systems Research” by Hevner, March, Park, and Ram in MIS Quarterly and the initiation of the Information Technology and Systems department of the Communications of AIS. These events in 2004 are markers in the move of design science to the forefront of information systems research. A sufficient interval has elapsed since then to allow assessment of from where the field has come and where it should go. Design science research and behavioral science research started as dual tracks when IS was a young field. By the 1990s, the influx of behavioral scientists started to dominate the number of design scientists and the field moved in that direction. By the early 2000s, design people were having difficulty publishing in mainline IS journals and in being tenured in many universities. Yes, an annual Workshop on Information Technology and Systems (WITS) was established in 1991 in conjunction with the International Conference on Information Systems (ICIS) and grew each year. But that was the extent of design science recognition. Fortunately, a revival is underway. By 2009, when this foreword was written, the fourth DESRIST conference has been held and plans are afoot for the 2010 meeting. Design scientists regained respect and recognition in many venues where they previously had little.
