AU-18 Space Primer Air Command Staff College,2012-08-01 The US National Space Policy released by the president in 2006 states that the US government should develop space professionals. As an integral part of that endeavor, AU-18, Space Primer, provides to the joint war fighter an unclassified resource for understanding the capabilities, organizations, and operations of space forces. This primer is a useful tool both for individuals who are not space aware-unacquainted with space capabilities, organizations, and operations-and for those who are space aware, especially individuals associated with the space community, but not familiar with space capabilities, organizations, and operations outside their particular areas of expertise. It is your guide and your invitation to all the excitement and opportunity of space. Last published in 1993, this updated version of the Space Primer has been made possible by combined efforts of the Air Command and Staff College's academic year 2008 Jointspacemindedness and Operational Space research seminars, as well as select members of the academic year 2009 Advanced Space research seminar. Strategic Stability in the Second Nuclear Age Gregory D. Koblentz,2014-11-01 The world has entered a second nuclear age shaped by rising nuclear states and military technologies. Gregory Koblentz argues that the United States should work with the other nuclear-armed states to manage threats to nuclear stability in the near term and establish processes for multilateral arms control efforts over the longer term.

The Second Nuclear Age Paul Bracken,2012-11-13 A leading international security strategist offers a compelling new way to think about the unthinkable. The cold war ended more than two decades ago, and with its end came a reduction in the threat of nuclear weapons—a luxury that we can no longer indulge. It's not just the threat of Iran getting the bomb or North Korea doing something rash; the whole complexion of global power politics is changing because of the reemergence of nuclear weapons as a vital element of statecraft and power politics. In short, we have entered the second nuclear age. In this provocative and agenda-setting book, Paul Bracken of Yale University argues that we need to pay renewed attention to nuclear weapons and how their presence will transform the way crises develop and escalate. He draws on his years of experience analyzing defense strategy to make the case that the United States needs to start thinking seriously about these issues once again, especially as new countries acquire nuclear capabilities. He walks us through war-game scenarios that are all too realistic, to show how nuclear weapons are changing the calculus of power politics, and he offers an incisive tour of the Middle East, South Asia, and East Asia to underscore how the United States must not allow itself to be unprepared for managing such crises. Frank in its tone and farsighted in its analysis, *The Second Nuclear Age* is the essential guide to the new rules of international politics.

Effects of Nuclear Earth-Penetrator and Other Weapons National Research Council,Division on Engineering and Physical Sciences,Committee on the Effects of Nuclear Earth-Penetrator and Other Weapons,2005-10-06 Underground facilities are used extensively by many nations to conceal and protect strategic military functions and weapons' stockpiles. Because of their depth and hardened status, however, many of these strategic hard and deeply buried targets could only be put at risk by conventional or nuclear earth penetrating weapons (EPW). Recently, an engineering feasibility study, the robust nuclear earth penetrator program, was started by DOE and DOD to determine if a more effective EPW could be designed using major components of existing nuclear weapons. This activity has created some controversy about, among other things, the level of collateral damage that would ensue if such a weapon were used. To help clarify this issue, the Congress, in P.L. 107-314, directed the Secretary of Defense to request from the NRC a study of the anticipated health and environmental effects of nuclear earth-penetrators and other weapons and the effect of both conventional and nuclear weapons against the storage of biological and chemical weapons. This report provides the results of those analyses. Based on detailed numerical calculations, the report presents a series of findings comparing the effectiveness and expected collateral damage of nuclear EPW and surface nuclear weapons under a variety of conditions.

The Future of the U.S. Intercontinental Ballistic Missile Force Lauren Caston,Robert S. Leonard,Christopher A. Mouton,Chad J. R. Ohlandt,S. Craig Moore,Raymond E. Conley,Glenn Buchan,2014-02-04 The authors assess alternatives for a next-generation intercontinental ballistic missile (ICBM) across a broad set of potential characteristics and situations. They use the current Minuteman III as a baseline to develop a framework to characterize alternative classes of ICBMs, assess the survivability and effectiveness of possible alternatives, and weigh those alternatives against their cost.

Radiological and Nuclear Terrorism P. Andrew Karam,2021-03-10 This book discusses multiple aspects of radiological and nuclear terrorism. Do you know what to do if there is a radiological or nuclear emergency in your city? These accidents are not common, but they have happened – and even though we have not seen an attack using these weapons, governments around the world are making plans for how to prevent them – and for how to respond if necessary. Whether you are an emergency responder, a medical caregiver, a public health official – even a member of the public wanting to know how to keep yourself and your loved ones safe – there is a need to understand how these weapons work, how radiation affects our health, how to stop an attack from taking place, how to respond appropriately in the event of an emergency, and much more. Unfortunately, the knowledge that is needed to accomplish all of this is lacking at all levels of society and government. In this book, Dr. Andrew Karam, an internationally respected expert in radiation safety and multiple aspects of radiological and nuclear emergencies, discusses how these weapons work and what they can do, how they can affect our health, how to keep yourself safe, and how to react appropriately whether you are a police officer investigating a suspect radiological weapon, a firefighter responding to a radiological or nuclear attack, a nurse or physician caring for potentially contaminated patients, or a governmental official trying to keep the public safe. To do this, he draws upon his extensive experience in the military, the several years he worked directly with emergency responders, his service on a number of advisory committees, and multiple trips overseas in the aftermath of the Fukushima accident and on behalf of the International Atomic Energy Agency, Interpol, and the Health Physics Society.

To Defend and Deter John C. Lonnquest,David F. Winkler,2014-11-17 The Department of Defense's official history of the United States Cold War missile program--completely reformatted with all-new color illustrations and photographs not used in the original edition. The DoD commissioned this study as part of its Cold War Project in 1996. With permission from the DoD's Legacy Program, Hole in the Head Press brings To Defend and Deter back into print. This informative guide offers a thorough look at Cold War missile development, from the earliest beginnings of rocketry in the 13th century to the arms control agreements that began in the 1970s. Both a narrative history and reference guide, To Defend and Deter traces the evolution of the Cold War and establishes the United States missile program's scope and its massive impact on the American landscape, citizens, and structure of the U.S. military establishment.

Kenneth Burke's Permanence and Change Ann George,2018-11-27 A guide to and analysis of a seminal books key concepts and methodology Since its publication in 1935, Kenneth Burke's Permanence and Change, a text that can serve as an introduction to all his theories, has become a landmark of rhetorical theory. Using new archival sources and contextualizing Burke in the past and present, Ann George offers the first sustained exploration of this work and seeks to clarify the challenging book for both amateurs and scholars of rhetoric. This companion to Permanence and Change explains Burke's theories through analysis of key concepts and methodology, demonstrating how, for Burke, all language and therefore all culture is persuasive by nature. Positioning Burke's book as a pioneering volume of New Rhetoric, George presents it as an argument against systemic violence, positivism, and moral relativism. Permanence and Change has become the focus of much current rhetorical study, but George introduces Burke's previously unavailable outlines and notes, as well as four drafts of the volume, to investigate his work more deeply than ever before. Through further illumination of the book's development, publication, and reception, George reveals Burke as a public intellectual and critical educator, rather than the eccentric, aloof genius earlier scholars imagined him to be. George argues that Burke was not ahead of his time, but rather deeply engaged with societal issues of the era. She redefines Burke's mission as one of civic engagement, to convey the ethics and rhetorical practices necessary to build communities interested in democracy and human welfare—lessons that George argues are as needed today as they were in the 1930s.

The Diffusion of Military Power Michael C. Horowitz,2010-07-01 The Diffusion of Military Power examines how the financial and organizational challenges of adopting new methods of fighting wars can influence the international balance of power. Michael Horowitz argues that a state or actor wishing to adopt a military innovation must possess both the financial resources to buy or build the technology and the internal organizational capacity to accommodate any necessary changes in recruiting, training, or operations. How countries react to new innovations--and to other actors that do or don't adopt them--has profound implications for the global order and the likelihood of war. Horowitz looks at some of the most important military innovations throughout history, including the advent of the all-big-gun steel battleship, the development of aircraft carriers and nuclear weapons, and the use of suicide terror by nonstate actors. He shows how expensive innovations can favor wealthier, more powerful countries, but also how those same states often stumble when facing organizationally complicated innovations. Innovations requiring major upheavals in doctrine and organization can disadvantage the wealthiest states due to their bureaucratic inflexibility and weight the balance of power toward smaller and more nimble actors, making conflict more likely. This book provides vital insights into military innovations and their impact on U.S. foreign policy, warfare, and the distribution of power in the international system.

The Missile Next Door Gretchen Heefner,2012-09-10 In the 1960s the Air Force buried 1,000 ICBMs in pastures across the Great Plains to keep U.S. nuclear strategy out of view. As rural civilians of all political stripes found themselves living in the Soviet crosshairs, a proud Plains individualism gave way to an economic dependence on the military-industrial complex that still persists today.
