**Troubled Partnership** Mark Lorell, 2020-03-09 During World War II. Japanese fighters, such as the famed Zero, were among the most respected and feared combat aircraft in the world. But for decades following the defeat of Japan in 1945, a variety of political and economic factors prevented Japan from developing its own modern national fighter. This changed in the 1980s. Japan began independently developing its first world-class fighter since World War II. After several years of contentious negotiations, the Japanese agreed to work with the United States to cooperatively develop a minimally modified F-16, the FS-X. The new fighter, however, has evolved into a world-class aircraft developed largely by Japanese industry primarily due to errors committed by the U.S. side. By the fall of 1995, fifty years after the end of World War II, the Zero for the 1990s will have made its first flight, catapulting Japan into the elite ranks of nations capable of developing the most advanced weapon systems. In *Troubled Partnership*, Mark Lorell traces the evolution of the FS-X, disclosing the conflicting economic and security objectives advanced by U.S. officials, the flawed U.S. policy of technology reciprocity, and the challenges of international collaboration. Its deep intimacy with the interplay of policy and economy will make this volume of intense interest to political scientists, military studies specialists, historians, and government officials.

**China's Wings** Gregory Crouch, 2012-02-28 From the acclaimed author of *Enduring Patagonia* comes a dazzling tale of aerial adventure set against the roiling backdrop of war in Asia. The incredible real-life saga of the flying band of brothers who opened the skies over China in the years leading up to World War II—and boldly safeguarded them during that conflict—*China's Wings* is one of the most exhilarating untold chapters in the annals of flight. At the center of the maelstrom is the book's courtly, laconic protagonist, American aviation executive William Langhorne Bond. In search of adventure, he arrives in Nationalist China in 1931, charged with turning around the turbulent nation's flagging airline business, the China National Aviation Corporation (CNAC). The mission will take him to the wild and lawless frontiers of commercial aviation: into cockpits with daredevil pilots flying—sometimes literally—on a wing and a prayer; into the dangerous maze of Chinese politics, where scheming warlords and volatile military officers jockey for advantage; and into the boardrooms, backrooms, and corridors of power inhabited by such outsized figures as Generalissimo and Madame Chiang Kai-shek; President Franklin Delano Roosevelt; foreign minister T. V. Soong; Generals Arnold, Stilwell, and Marshall; and legendary Pan American Airways founder Juan Trippe. With the outbreak of full-scale war in 1941, Bond and CNAC are transformed from uneasy spectators to active participants in the struggle against Axis imperialism. Drawing on meticulous research, primary sources, and extensive personal interviews with participants, Gregory Crouch offers harrowing accounts of brutal bombing runs and heroic evacuations, as the fight to keep one airline flying becomes part of the larger struggle for China's survival. He plunges us into a world of perilous night flights, emergency water landings, and the constant threat of predatory Japanese warplanes. When Japanese forces capture Burma and blockade China's only overland supply route, Bond and his pilots must battle shortages of airplanes, personnel, and spare parts to airlift supplies over an untried five-hundred-mile-long aerial gauntlet high above the Himalayas—the infamous “Hump”—pioneering one of the most celebrated endeavors in aviation history. A hero's-eye view of history in the grand tradition of Lynne Olson's *Citizens of London*, *China's Wings* takes readers on a mesmerizing journey to a time and place that reshaped the modern world.

**Flying Tigers** Daniel Ford, 2023-05-01 During World War II, in the skies over Burma and China, a handful of

American pilots met and bloodied the Imperial Wild Eagles of Japan and won immortality as the Flying Tigers. One of America's most famous combat forces, the Tigers were recruited to defend beleaguered China for \$600 a month and a bounty of \$500 for each Japanese plane they shot down--fantastic money in an era when a Manhattan hotel room cost three dollars a night. This May 2023 revision has never-before-published information about Chennault's early years. Admirable, wrote Chennault biographer Martha Byrd of Ford's original text. A readable book based on sound sources. Expect some surprises. Flying Tigers won the Aviation/Space Writers Association Award of Excellence in the year of its first publication.

**Japanese Experimental Transport Aircraft of the Pacific War** Giuseppe Picarella, 2012-01-26 Information in English on Japanese WW2 transport aircraft is hard to find, and in this book the story of the Japanese experimental transport designs is told in great detail. The context is explained, with information on the low priority given to transport aircraft and the disastrous implications of that neglect for the Japanese war effort. Fully illustrated with many rare photos and excellent artwork, the various designs and proposals for transport aircraft during the war are described and discussed, both novel designs and adaptations of bomber aircraft. Giuseppe (Joe) Picarella is a professional graphic artist specializing in aviation, whose work is seen in many major aviation journals. He is also an authority on Japanese WW2 aircraft, with a significant archive of rare photos and documents.

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

**Japanese Aero-Engines 1910-1945** Mike Goodwin, 2017 In this book the authors have endeavored to remedy the notable lack of comprehensive coverage. The development of all the many engines produced by Japanese aero-engine manufacturing companies from 1912 to 1945 is explored in detail, including a full explanation of the different systems used to identify them. Furthermore, the developments are related to the aircraft in which the various engines were used, including prototypes, flying test-beds, and changes in the make or type of engine during an aircraft's operational service. In other words aircraft evolution in Japan is viewed in snapshots as it happened from the aero-engine aspect and not from the complete aircraft aspect as is featured in most publications. Unfortunately this approach necessitates numerous cross-references in the text where several different engines are associated with a particular aircraft, for which the authors can only apologize. Lastly, to illustrate the industrial background, the origin and development of each of the aero-engine manufacturing companies is also

outlined briefly

World Investment Report 2019 United Nations Conference on Trade and Development, 2019-08-09 The 2019 edition of the World Investment Report focuses on special economic zones (SEZs) which are widely used across most developing and many developed economies. Although the performance of many zones remains below expectations, the rate of establishment of new zones is accelerating as governments increasingly compete for internationally mobile industrial activity. Policymakers face not only the traditional challenges to making SEZs succeed, including the need for strategic focus, sound governance models, and effective investment promotion tools, but also new challenges brought about by the sustainable development imperative, the new industrial revolution, and changing patterns of international production. The Report explores the place of SEZs in today's global investment landscape and provides guidance for policymakers on how to make SEZs work for sustainable development. It presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases.

**Improving Food Safety Through a One Health Approach** Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2012-09-10 Globalization of the food supply has created conditions favorable for the emergence, reemergence, and spread of food-borne pathogens—compounding the challenge of anticipating, detecting, and effectively responding to food-borne threats to health. In the United States, food-borne agents affect 1 out of 6 individuals and cause approximately 48 million illnesses, 128,000 hospitalizations, and 3,000 deaths each year. This figure likely represents just the tip of the iceberg, because it fails to account for the broad array of food-borne illnesses or for their wide-ranging repercussions for consumers, government, and the food industry—both domestically and internationally. A One Health approach to food safety may hold the promise of harnessing and integrating the expertise and resources from across the spectrum of multiple health domains including the human and veterinary medical and plant pathology communities with those of the wildlife and aquatic health and ecology communities. The IOM's Forum on Microbial Threats hosted a public workshop on December 13 and 14, 2011 that examined issues critical to the protection of the nation's food supply. The workshop explored existing knowledge and unanswered questions on the nature and extent of food-borne threats to health. Participants discussed the globalization of the U.S. food supply and the burden of illness associated with foodborne threats to health; considered the spectrum of food-borne threats as well as illustrative case studies; reviewed existing research, policies, and practices to prevent and mitigate foodborne threats; and, identified opportunities to reduce future threats to the nation's food supply through the use of a One Health approach to food safety. *Improving Food Safety Through a One Health Approach: Workshop Summary* covers the events of the workshop and explains the recommendations for future related workshops.

**You Suck at Racing** Ian Korf, 2016-05-12 A lot of books on driving are written by professional racers who assume you too want to be a professional racer. Not this book. It's written by a hobbyist who suggests you keep your day job. Besides, it's much more fun being an enthusiastic amateur than a jaded professional (just ask someone in the sex industry). This book is designed to help the average driver make the transition from commuter to safe road

racer in as few pages as possible. I wrote this book because it's what I would have wanted to read when I first became interested in track driving: succinct, nerdy, practical, and occasionally diverting. It is not intended as a definitive tome or a work of art. It's more like a sandwich: convenient and nourishing.

*The Japanese Conspiracy* Masayo Duus, 1999-10 A dramatic tale of how a little-remembered strike in Hawaii fanned the flames of anti-Japanese sentiment in the United States and, the author argues, ultimately led to the infamous Japanese Exclusion Act of 1924.

**The Tools of Owatatsumi** Desmond Ball, Richard Tanter, 2015-01-21 Japan is quintessentially by geography a maritime country. Maritime surveillance capabilities - underwater, shore-based and airborne - are critical to its national defence posture. This book describes and assesses these capabilities, with particular respect to the underwater segment, about which there is little strategic analysis in publicly available literature. Since the end of the Cold War, Chinese oceanographic and navy vessels have intruded into Japanese waters with increasing frequency, not counting their activities in disputed waters such as around the Senkaku (Diaoyu) Islands and Okinotorishima where China and Japan have overlapping territorial claims. These intrusions have increasingly involved warships, including submarines, sometimes acting quite aggressively. Japan maintains an extraordinary network of undersea hydrophone arrays, connected to shore-stations which are typically equipped with electronic intelligence (ELINT) systems, for monitoring, identifying and tracking submarine and surface traffic in its internal straits and surrounding seas. Some parts of this network are operated jointly with, and are of crucial importance to, the US Navy. Japan's superlative submarine detection capabilities would be of decisive advantage in any submarine engagement. But the relevant facilities are relatively vulnerable, which makes them very lucrative targets in any conflict. This introduces compelling escalatory dynamics, including the involvement of US forces and possible employment of nuclear options.
