Automotive FDI in Emerging Europe A. J. Jacobs, 2017-06-19 This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

2020 XII International Science Technical Conference AUTOMOTIVE SAFETY IEEE Staff, 2020-10-21 The automotive safety has become one of the most important problems of our civilization. The 12th International Conference on Automotive Safety aims to bring together leading academic scientists, researchers and entrepreneurs to exchange and share their experiences and research results about all aspects of vehicle safety. It also provides the latest research results, ideas, developments, and applications in improvement in safety systems and safety technologies, solutions for the crash avoidance, examination of the driving behavior, and issues of collision damage quantification and accident reconstruction.

Automotive Accident Reconstruction Donald E. Struble, Ph.D., 2013-09-24 Automotive Accident Reconstruction: Practices and Principles introduces techniques for gathering information and interpreting evidence, and presents computer-based tools for analyzing crashes. This book provides theory, information and data sources, techniques of investigation, an interpretation of physical evidence, and practical tips for beginners. It also works as an ongoing reference for experienced reconstructionists. The book emphasizes three things: the theoretical foundation, the presentation of data sources, and the computer programs and spread sheets used to apply both theory and collected data in the reconstruction of actual crashes. It discusses the specific requirements of reconstructing rollover crashes, offers background in structural mechanics, and describes how structural mechanics and impact mechanics are applied to automobiles that crash. The text explores the treatment of crush energy when vehicles collide with each other and with fixed objects. It delves into various classes of crashes, and simulation models. The framework of the book starts backward in time, beginning with the analysis of post-crash vehicle motions that occurred without driver control. Applies time-reverse methods, in a detailed and rigorous way, to vehicle run-out trajectories, utilizing the available physical evidence. Walks the reader through a collection of digital crash test data from public sources, with detailed instructions on how to process and filter the information. Shows the reader how to build spread sheets detailing calculations involving crush energy and vehicle post-crash trajectory characteristics. Contains a comprehensive treatment of crush energy. This text can also serve as a resource for industry professionals, particularly with regard to the underlying physics.

Gangster Government David Freddoso, 2011-04-04 And in this new and stunning book, New York Times best-selling author David Freddoso (The Case Against Barack Obama) provides the much-needed exposé of an administration that has brought Chicago-style corruption and strong-arm politics to Washington, looking to reward its friends (the unions, federal workers, and other liberal interest groups) and punish its enemies (the private sector workers and taxpayers who foot the bill for Obama's massive expansion of the federal government).

Vehicle Accident Analysis and Reconstruction Methods Matthew Brach, 2022 In this third edition of Vehicle Accident Analysis & Reconstruction Methods, Raymond M. Brach and R. Matthew Brach have expanded and updated their essential work for professionals in the field of accident reconstruction. Most accidents can be reconstructed effectively using calculations and investigative and experimental data: the authors present the latest scientific, engineering, and mathematical reconstruction methods, providing a firm scientific foundation for practitioners. Accidents that cannot be reconstructed using the methods in this book are rare. In recent decades, the field of crash reconstruction has been transformed through the use of technology. The advent of event data records (EDRs) on vehicles signaled the era of modern crash reconstruction, which utilizes the same physical evidence that was previously available as well as electronic data that are measured/captured before, during, and after the collision. There is increased demand for more professional and accurate reconstruction as more crash data is available from vehicle sensors. The third edition of this essential work includes a new chapter on the use of EDRs as well as examples using EDR data in accident reconstruction. Early chapters feature foundational material that is necessary for the understanding of vehicle collisions and vehicle motion; later chapters present applications of the methods and include example reconstructions. As a result, Vehicle Accident Analysis & Reconstruction Methods remains the definitive resource in accident reconstruction.

Twelve Years a Slave Solomon Northup, 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

Every Student's Book includes a CD that contains source files for the tasks and activities. Answers to all questions can be found on the Teacher's CD Rom.

CONAT 2016 International Congress of Automotive and Transport Engineering Anghel Chiru, Nicolae Ispas, 2016-10-31 The volume will include selected and reviewed papers from CONAT - International Congress of Automotive and Transport Engineering to be held in Brasov, Romania, in October 2016. Authors are experts from research, industry and universities coming from 14 countries worldwide. The papers are covering the latest developments in automotive vehicles and environment, advanced transport systems and road traffic, heavy and special vehicles, new materials, manufacturing technologies and logistics, accident research and analysis and innovative solutions for automotive vehicles. The conference will be organized by SIAR (Society of Automotive Engineers from Romania) in cooperation with FISITA.

The Withered Vine Charles R. Shrader, 1999-12-30 An explanation of the failure of the Communist insurgency in Greece between 1945 and 1949,

this study provides a striking lesson in what happens to an armed revolutionary movement when it lacks adequate manpower and logistical resources, and is divided against itself on such basic matters as foreign policy and the employment of its military capabilities. During the period of 1945-1949, the Greek Communist Party was split into competing factions, each with its own idea of which course the rebellion should take. The Stalinist faction, led by Secretary-General Nikos Zachariades, was pitted against the more pragmatic nationalist wing led by the commander of the Greek Democratic Army, Markos Vafiades. Shrader provides a detailed examination of the logistical aspects of the war, particularly the impact of political decisions and the aid provided to the Greek Communists by outside supporters on logistics and operations. At each successive stage of the conflict, Zachariades outmaneuvered his rivals and imposed policies that both reduced the resources available to the Communist-led insurgents and sought to turn an effective guerrilla force into a conventional army employing conventional operational methods. The decisions taken by the Greek Communist Party under Zachariades' leadership alienated both the domestic supporters of the Communist rebellion and its key external supporters, such as Marshal Tito of Yugoslavia. Ultimately, the conventionally organized Greek Democratic Army proved unable to sustain itself logistically, and it was defeated in August 1949 by the constantly improving Greek National forces aided by the United States.

Performance in a Pandemic Laura Bissell,Lucy Weir,2021-12 This edited collection gathers UK and international artists, academics, practitioners and researchers in the fields of contemporary performance, dance and live art to offer creative-critical responses to the impact of the COVID-19 pandemic on their work. Themes addressed in these case studies include the ways in which liveness functions across digital platforms, the new demands on audiences and performance-makers, those artists and makers who can't or won't move their practice online, and the impact on international festivals as the digital removes geographical and locational restrictions. Brought together, these examples capture the creative activity and output that this unexpected cultural moment has provoked. Creative-critical responses interrogate what the global pandemic has taught us about what it is to make live work during lockdown, and explore what the future of performance-making in a post-Covid world might look like. For all scholars and performance makers whose work brings them into the sphere of contemporary art and culture, this is an essential and stimulating account of practice at the beginning of the 2020s--
