**Tupolev Tu-144** Yefim Gordon, E. Gordon, Vladimir Rigmant, 2005 The rapid development of commercial aviation in the 1950s and 1960s, coupled with advancing aircraft technology, led Great Britain and France to pool resources to create the famous supersonic Concorde airliner. As soon as the Soviet government got wind of this program, it tasked the national aircraft industry with an even more ambitious project: the Soviet Union was to create an SST entirely on its own and ahead of the West; this was a matter of national prestige. Predictably, Andrey N. Tupolev received the assignment to create the airliner that would place the Soviet Union in the lead. At the cost of a tremendous research and development effort, the target was met and designated Tu-144 (and dubbed, rather mockingly, Concoriski by the West), the Soviet SST took to the air in December 1968 ahead of its Anglo-French counterpart. This book gives a detailed account of the Tu-144's design and explains the reasons of its premature withdrawal; it also describes the type's recent use in a new-generation SST technology research program held jointly with NASA. It is illustrated with numerous previously unreleased photos and line drawings.

Tupolev Tu-144 E. Gordon, Yefim Gordon, Dmitriy Komissarov, Vladimir Rigmant, 2015 Developed in the 1960s/1970s, the Tu-144 was the Soviet Union's only practical venture into supersonic commercial aviation. Though its career was all too brief, it was a major technological achievement for the Soviet aircraft industry. The book provides in-depth coverage of the Concoriski, including projected versions, the Tu-144's production and service history, and a comparison with the Concorde. First flown on the last day of 1968 ahead of the Concorde the Tu-144 had to undergo a long gestation period before the

production version entered service in November 1977. Unfortunately, its career proved to be brief; two accidents and a powerful anti-Tu-144 lobby caused the type to be withdrawn in May 1978. The book describes the Tu-144's versions (including the Tu-144LL research aircraft developed under a Russian-U.S. program) and touches on the projected military derivatives. It is illustrated with color side views and previously unpublished photographs. -- Publisher marketing.

**Tupolev Tu-114** Yefim Gordon, Vladimir Rigmant, 2007 In the early 1950s, OKB Tupolev, the Tupolev design bureau, was instructed by the Soviet government to design a civil airliner with an intercontinental range. Based upon the earlier four-engined Tu-95 strategic bomber, the resulting aircraft was the largest airliner constructed at that time, providing accommodation for up to 220 passengers. The Tu-144 confounded experts by being able to fly at speeds similar to those achieved by jet aircraft, while still using turboprop technology. The Tu-114 set a number of records, including the speed record for a turbo-prop aircraft that still stands 50 years later. A total of 31 Tu-114's entered service with Aeroflot, operating over long distance internal services and international services to cities from Tokyo to Havana. Gradually replaced from 1971, the last Tu-144 Aeroflot service was withdrawn in 1975. However, a number of the Tu-114's were subsequently converted into AWACS aircraft as the Tu-126 Moss for operation in the Soviet navy.

*Tupolev* Paul Duffy, A. I. Kandalov, 1996 This book focuses on the aircraft designs of the man often referred to as the father of Russian aviation, Andrei Nikolaevich Tupolev. Born in Russia in 1888, Tupolev went on to design aircraft that earned Russia worldwide acclaim for their contributions to aviation in the 1920s, '30s, and '40s.

**OKB Tupolev** E. Gordon, Vladimir Rigmant, 2005 A History of the Design Bureau and its Aircraft Yefim Gordon & Vladimir Rigmant The origins of the design bureau that was to bear his name can be traced back to the appointment of Andrey Nikolayevich Tupolev as head of the TsAGI's Aviation Department in 1918. Over the years, nearly 300 projects have evolved within the OKB. Nearly 90 reached the prototype construction stage, with more than 40 types put into series production. In the 1930s, the TB-1 (ANT-4) and TB-3 (ANT-6) bombers, the latter being the world's first heavy strategic bomber, paved the way for the long line of large multi-engined aircraft both civil and military for which the OKB is justly famed. Wartime production of the SB and Tu-2 plus the remarkable 'reverse engineering' of the Boeing B-29 that resulted in the Tu-4 led on to the jet Tu-16 and prop Tu-95 bombers. These, in turn were adapted for civil purposes as the Tu-104 and Tu-114 airliners. The supersonic Tu-22 and Tu-22M bombers and the Tu-144 airliner, a move into pilotless aircraft and a host of imaginative but unbuilt projects complete a fascinating work.

**Aérospatiale/British Aerospace Concorde** Günter G. Endres, 2001 This volume provides an overview of the development of supersonic transport aircraft, and the so far unsuccessful projects to produce a second-generation SST. It includes a study not just of Concorde, but also the Tupolev TU-144, and an account of the crash of the 25th of July 2000.

**Tupolev Tu-134** Dmitriï Komissarov, 2004 81/2 x 11, 260 color & b&w photos, The Tu-134, which has given sterling service for 35 years now, has played a major role in

Soviet/Russian civil aviation. It was the first jet type operated the flag carriers of several nations allied with the Soviet Union. The Tu-134 has seen service in 42 countries in Europe, Southeast Asia, the Middle East, Africa and South America. Apart from passenger flights, its multifarious activities include VIP transportation, support of Air Force, Army and Navy headquarters and miscellaneous research and test work. The type has helped train thousands of military pilots and navigators for the Soviet Air Forces' tactical and long-range bomber components. Compiled from first-hand Russian sources, the book gives an account of the Tu-134 and the type's design, test and operational history. Every known version, including military and various test aircraft, is painstakingly described here. Detailed fleet lists are given of all known Tu-134 operators. The book features a full production list of more than 800 aircraft and accident details.

**Tupolev Tu-154** Colin Ballantine,1995 The Tupolev Tu-154 was designed to operate medium-haul routes within the former Soviet Union and as an export earner. The book includes photographs of the aircraft in its various liveries and gives a brief summary on each airline featured. Plan views and s

Lechosław Musiałkowski,2020-04-10 The next book in the popular Polish Wings series is on the famous Russian WW2 bombers and trainers in Polish Air Forces. Covers duty of these aircraft during WW2 and postwar period. More than 120 photos, mostly unpublished, and many colour profiles. Book covers: Tu-2, UTB-2 and Shche-2 aircraft

**Unflown Wings** Dmitriy Komissarov,Sergey Komissarov,Yefim Gordon,2013 This book surveys all the Soviet/Russian aircraft that either remained “paper projects” (the work progressed no further than the design

documents or even merely a design proposal) or were abandoned at the prototype construction stage. Over many years, the authors have unearthed a mass of unpublished material on these aircraft projects including the Isayev/Shevchenko bi-monoplane fighters with retractable lower wings developed in the 1930s, early Soviet jet fighter projects of the Second World War period, and the twin-boom fighters and attack aircraft developed by Semyon M. Alekseyev in the late 1940s. Wherever possible, images of the aircraft are shown, including pictures of models, and line and cutaway drawings from the project documents, giving the readers the maximum available information on Soviet aircraft projects developed over a large time scale. The book is richly illustrated with numerous photos, drawings, and diagrams, as well as color side views of the unbuilt aircraft, which will be of interest not only to the numerous Soviet/Russian aviation enthusiasts but also to scale modelers.

**Aviation Systems** Andreas Wittmer, Thomas Bieger, Roland Müller, 2011-08-17 This book aims to provide comprehensive coverage of the field of air transportation, giving attention to all major aspects, such as aviation regulation, economics, management and strategy. The book approaches aviation as an interrelated economic system and in so doing presents the “big picture” of aviation in the market economy. It explains the linkages between domains such as politics, society, technology, economy, ecology, regulation and how these influence each other. Examples of airports and airlines, and case studies in each chapter support the application-oriented approach. Students and researchers in business administration with a focus on the aviation industry, as well as professionals in the industry looking to refresh or broaden their knowledge of the field will benefit from this book.

### Tupolev Tu-160 Yefim Gordon,Dmitriy

Komissarov,2016-11-28 Developed as the answer to the American B-1, the Tupolev Tu-160 was the Soviet Union's most potent strategic bomber. Several project versions were rejected, and a highly controversial contest involving some of the Soviet Union's top-class aircraft design companies took place before the Tu-160 variable-geometry bomber reached the hardware stage. Its design made use of many advanced features not used previously on Soviet bombers. While being a nuclear deterrent for most of its career, the Tu-160 has recently seen actual combat in the war on terrorism. The Tu-160 story is not over yet, since Russia is now resuming production of the type to bolster its strategic potential. The book gives the type's complete development, test and service history of the Tu-160, including such intriguing episodes as the type's overseas deployment to Venezuela, and the flight of a Tu-160 with Russian President Vladimir Putin aboard. It is richly illustrated with color photos and original factory drawings. A comparison is made of the Tu-160 and its American counterpart, the B-1.

Ask the Pilot Patrick Smith,2004 Though we routinely take to the air, for many of us flying remains a mystery. Few of us understand the how and why of jetting from New York to London in six hours. How does a plane stay in the air? Can turbulence bring it down? What is windshear? How good are the security checks? Patrick Smith, an airline pilot and author of Salon.com's popular column, Ask the Pilot, unravels the secrets and tells you all there is to know about the strange and fascinating world of commercial flight. He offers: A nuts and bolts explanation of how planes fly Insights into safety and security Straight talk about turbulence, air traffic control, windshear, and crashes The history, color, and controversy of the world's airlines The

awe and oddity of being a pilot The poetry and drama of airplanes, airports, and traveling abroad In a series of frank, often funny explanations and essays, Smith speaks eloquently to our fears and curiosities, incorporating anecdotes, memoir, and a life's passion for flight. He tackles our toughest concerns, debunks conspiracy theories and myths, and in a rarely heard voice dares to return a dash of romance and glamour to air travel.

It finishes with a look at the final throes of TSR2's cancellation by the Labour government in 1965.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan);

jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

**Soviet Fighters of the Second World War** Jason Nicholas Moore, 2021-07-30 The Red Air Force had just started to re-equip with modern monoplane fighters when the Germans opened Operation Barbarossa, the invasion of the Soviet Union. Hundreds of fighters were destroyed in the first few days, but many of these were obsolete biplanes. *Soviet Fighters of the Second World War* details fighter development from the dark days of Barbarossa to eventual triumph over Berlin. Starting with outdated aircraft such as the Polikarpov Po-2 biplane and monoplane fighters, the Soviets then settled on two main lines of development: the inline-engine LaGG-3 and its radial-engine derivatives, the La-5 and La-7, and the inline-engine Yakovlev fighters, which were produced in greater numbers than any other series of fighters. Not only are these aircraft accurately described, but experimental fighters are also dealt with. In addition, colour profiles illustrate these aircraft in terms of design, camouflage and markings. From the I-15bis biplane of the late 1930s to the superb La-7 and

Yak-3 fighters of the last year of the war, all Red Air Force fighters are covered in this comprehensive volume.
