Soyuz Rex Hall,David Shayler,2003-05-07 Rex Hall and Dave Shayler provide a unique history of the Soyuz spacecraft programme from conception, through development to its use, detailed in the only English language book available on this topic. Planned for publication in 2003, it will celebrate 40 years since the original concept of the Soyuz craft.

*The Camel and the Wheel* Richard W. Bulliet,1990 Why, for many centuries, was the wheel abandoned in the Middle East in favor of the camel as a means of transport? This richly illustrated study explains this anomaly. Drawing on archaeology, art, technology, anthropology, linguistics, and camel husbandry, Bulliet explores the implications for the region's economic and social development during the Middle Ages and into modern times.

**Soyuz 1** Asif Siddiqi,2020-04-10 A Newly Discovered Document Debunks Soviet Space Conspiracy Theories on Soyuz-1.In April 1967, the Soviets launched veteran cosmonaut Vladimir Komarov on the very first mission of the Soyuz spacecraft. A day later, the cosmonaut died after his space capsule plummeted to Earth and crashed in Soviet Central Asia.As soon as Komarov's death was announced, conjecture and rumors quickly filled the vacuum created by the lack of hard information. Stories ranged from tearful goodbyes with family or officials to cursing the engineers and designers-but none of this, of course, was ever confirmed.In 2018, an official copy of the Soyuz-1 Onboard Journal was discovered at auction. While translating the document, author Asif Siddiqi recognized that it contained information not previously available, including details from the final hours of the Soyuz-1 flight.

**Starman** Piers Bizony,Jamie Doran,2011-05-01 On April 12, 1961, Yuri Gagarin became the first person in history to leave the Earth's atmosphere and venture into space. His flight aboard a Russian Vostok rocket lasted only 108 minutes, but at the end of it he had become the most famous man in the world. Back on the ground, his smiling face captured the hearts of millions around the globe. Film stars, politicians and pop stars from Europe to Japan, India to the United States vied with each other to shake his hand. Despite this immense fame, almost nothing is known about Gagarin or the exceptional people behind his dramatic space flight. Starman tells for the first time Gagarin's personal odyssey from peasant to international icon, his subsequent decline as his personal life began to disintegrate under the pressures of fame, and his final disillusionment with the Russian state. President Kennedy's quest to put an American on the Moon was a direct reaction to Gagarin's achievement--yet before that successful moonshot occurred, Gagarin himself was dead, aged just thirty-four, killed in a mysterious air crash. Publicly the Soviet hierarchy mourned; privately their sighs of relief were almost audible, and the KGB report into his death remains secret. Entwined with Gagarin's history is that of the breathtaking and highly secretive Russian space program - its technological daring, its triumphs and disasters. In a gripping account, Jamie Doran and Piers Bizony reveal the astonishing world behind the scenes of the first great space spectacular, and how Gagarin's flight came frighteningly close to destruction.

*Preparing for the High Frontier* National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Committee on Human Spaceflight Crew Operations,2011-11-09 As the National Aeronautics and Space Administration (NASA) retires the Space Shuttle and shifts involvement in International Space Station (ISS) operations, changes in the role and requirements of NASA's Astronaut Corps will take place. At the request of NASA, the National Research Council (NRC) addressed three main questions about these changes: what should be the role and size of Johnson Space Center's (JSC) Flight Crew Operations Directorate (FCOD); what will be the requirements of astronaut training facilities; and is the Astronaut Corps' fleet of training aircraft a cost-effective means of preparing astronauts for NASA's spaceflight program? This report presents an assessment of several issues driven by these questions. This report does not address explicitly the future of human spaceflight.

**The Politics of Space Security** James Moltz,2011-06-29 The past five decades have witnessed often fierce international rivalry in space, but also surprising military restraint. Now, with an increasing number of countries capable of harming U.S. space assets, experts and officials have renewed a long-standing debate over the best route to space security. Some argue that space defenses will be needed to protect critical military and civilian satellites. Others argue that space should be a sanctuary from deployed weapons and military conflict, particularly given the worsening threat posed by orbital space debris. Moltz puts this debate into historical context by explaining the main trends in military space developments since Sputnik, their underlying causes, and the factors that are likely to influence their future course. This new edition provides analysis of the Obama administration's space policy and the rise of new actors, including China, India, and Iran. His conclusion offers a unique perspective on the mutual risks militaries face in space and the need for all countries to commit to interdependent, environmentally focused space security.

**Interior Space: a Visual Exploration of the International Space Station** Paolo Nespoli,Roland Miller,2020 Unseen images of the International Space Station, untenanted and eerie: the legacy of humanity's fragile foothold in space On November 2 2020, NASA celebrates the 20th anniversary of continuous human habitation in space of the International Space Station. In Interior Space, American photographer Roland Miller and Italian astronaut and photographer Paolo Nespoli offer an in-depth portrait of the ISS, creating amazing unpeopled images of the interior of the ISS for the first time. As internationally acclaimed scholars of space archaeology Alice Gorman and Justin St. P. Walsh write in their essays, the ISS speaks not only of who we are and will be, but also of who we were. In 2024 the ISS will be abandoned; in 2028 it will be destroyed. This book provides us with an eerie account of what will remain in the space after our passing. Italian-born astronaut Paolo Nespoli(born 1957) spent 313 days in space. After a career in the military, he earned a M.Sc. in Aerospace Engineering, then joined the European Space Agency spending time in Europe, the US and Russia. In 2007 he flew on the Space Shuttle and then, in 2010 to 2011 and 2017, he flew again to the International Space Station with the Russian Soyuz. He retired in 2018 from the astronaut corps launching a career as an international public speaker. Chicago-born photographer Roland Miller(born 1958) taught photography at Brevard Community College in Cocoa, Florida, for 14 years, where he visited many nearby NASA launch sites. He is the author of the acclaimed book Abandoned in Place: Preserving America's Space History, documenting deactivated and repurposed space launch and test facilities around the US. In 2017 he started the project Interior Space. His work is held at the Museum of Contemporary Photography, Chicago and at the NASA Art Collection in Washington, DC.

Salyut - The First Space Station Grujica S. Ivanovich,2008-10-22 This remarkable book gives a comprehensive account of the longest manned space mission of the time. It details for the first time the people involved and the crews assigned to operate the first space station Salyut. The book portrays the selection of the crews, dramatic flights and tragedy of Soyuz 11. Biographies of the Soyuz 11 cosmonauts are published for the first time in English. The book relates discussions between the key personnel, and investigates the causes of the tragedy. The book ends with memories of all those affected by the DOS program and the tragedy of Soyuz 11 and looks forward to a continuation of the historic mission of Salyut.

*Spacecraft* Michael H. Gorn,2018-09-04 Spacecraft takes a long look at humankind's attempts and advances in leaving Earth through incredible illustrations and authoritatively written profiles on Sputnik, the International Space Station, and beyond. In 1957, the world looked on with both uncertainty and amazement as the Soviet Union launched Sputnik 1, the first man-made orbiter. Sputnik

I would spend three months circling Earth every 98 minutes and covering 71 million miles in the process. The world's space programs have traveled far (literally and figuratively) since then, and the spacecraft they have developed and deployed represent almost unthinkable advances for such a relatively short period. This ambitiously illustrated aerospace history profiles and depicts spacecraft from Sputnik 1 through the International Space Station, and everything in between, including concepts that have yet to actually venture outside the Earth's atmosphere. Illustrator and aerospace professional Giuseppe De Chiara teams up with aerospace historian Michael Gorn to present a huge, profusely illustrated, and authoritatively written collection of profiles depicting and describing the design, development, and deployment of these manned and unmanned spacecraft. Satellites, capsules, spaceplanes, rockets, and space stations are illustrated in multiple-view, sometimes cross-section, and in many cases shown in archival period photography to provide further historical context. Dividing the book by era, De Chiara and Gorn feature spacecraft not only from the United States and Soviet Union/Russia, but also from the European Space Agency and China. The marvels examined in this volume include the rockets Energia, Falcon 9, and VEGA; the Hubble Space Telescope; the Cassini space probe; and the Mars rovers, Opportunity and Curiosity. Authoritatively written and profusely illustrated with more than 200 stunning artworks, *Spacecraft: 100 Iconic Rockets, Shuttles, and Satellites That Put Us in Space* is sure to become a definitive guide to the history of manned space exploration.

**Space Shuttle Missions Summary (NASA/TM-2011-216142)** Robert D. Legler, Floyd V. Bennett, 2011-09-01 Full color publication. This document has been produced and updated over a 21-year period. It is intended to be a handy reference document, basically one page per flight, and care has been exercised to make it as error-free as possible. This document is basically as flown data and has been compiled from many sources including flight logs, flight rules, flight anomaly logs, mod flight descent summary, post flight analysis of mps propellants, FDRD, FRD, SODB, and the MER shuttle flight data and in-flight anomaly list. Orbit distance traveled is taken from the PAO mission statistics.

**Amazing Stories of the Space Age** Rod Pyle, 2017 Reveals the most unusual space missions ever devised inside and outside of NASA during a time when nothing was too odd to be taken seriously, and the race to the moon and the threat from the Soviet Union trumped all other considerations. --Publisher.

**Space Racers** Isabel Thomas, 2017-10 *Space Racers* contains everything you need to press out and make your own paper rocket models. From the rocket that made the first manned space flight, Vostok K, to the future of space travel, the Skylon space plane. Use the easy to use, step-by-step instructions to build eight historically accurate rockets and two imaginary rockets, which are left blank for your own designs. A separate booklet introduces you to the exhilarating world of rocket science and space exploration, and includes fun and detailed fact files for each rocket. This is an exciting kit for space enthusiasts aged eight to adult.

**T-Minus** Jim Ottaviani, 2009-05-19 In graphic novel format, presents the story of two world superpowers racing to land a man on the moon, and the people who worked on the project.

**In the Shadow of the Moon** Francis French, Colin Burgess, 2007-01-01 Tells the story of the exciting and challenging years in space flight, with two superpowers engaged in a titanic struggle to land one of their own people on the moon. This book explores the inspirations, ambitions, personalities, and experiences of the select few whose driving ambition was to fly to the moon.

**Moon Shot** Alan Shepard, Deke Slayton, Jay Barbree, 2011-05-03 New York Times bestseller for fans of *First Man*: A "breathtaking" insider history of NASA's space program—from astronauts Alan Shepard and Deke Slayton (Entertainment Weekly). On October 4, 1957, the Soviet Union launched Sputnik I, and the space race was born. Desperate to beat the Russians into space, NASA put together a crew of the nation's most daring test pilots: the seven men who were to lead America to the moon. The first into space was Alan Shepard; the last was Deke Slayton, whose irregular heartbeat kept him grounded until 1975. They spent the 1960s at the forefront of NASA's effort to conquer space, and *Moon Shot* is their inside account of what many call the twentieth century's greatest feat—landing humans on another world. Collaborating with NBC's veteran space reporter Jay Barbree, Shepard and Slayton narrate in gripping detail the story of America's space exploration from the time of Shepard's first flight until he and eleven others had walked on the moon.

**The Space Shuttle Decision** T. A. Heppenheimer, 1999 Long before the NASA was the throes of planning for the Apollo voyages to the Moon, many people had seen the need for a vehicle that could access space routinely. The idea of a reusable space shuttle dates at least to the theoretical rocketplane studies of the 1930s, but by the 1950s it had become an integral part of a master plan for space exploration. The goal of efficient access to space in a heavy-lift booster prompted NASA's commitment to the space shuttle as the vehicle to continue human space flight. By the mid-1960s, NASA engineers concluded that the necessary technology was within reach to enable the creation of a reusable winged space vehicle that could haul scientific and applications satellites of all types into orbit for all users. President Richard M. Nixon approved the effort to build the shuttle in 1972 and the first orbital flight took place in 1981. Although the development program was risky, a talented group of scientists and engineers worked to create this unique space vehicle and their efforts were largely successful. Since 1981, the various orbiters -Atlantis, Columbia, Discovery, Endeavour, and Challenger (lost in 1986 during the only Space Shuttle accident)- have made early 100 flights into space. Through 1998, the space shuttle has carried more than 800 major scientific and technological payloads into orbit and its astronaut crews have conducted more than 50 extravehicular activities, including repairing satellites and the initial building of the International Space Station. The shuttle remains the only vehicle in the world with the dual ability to deliver and return large payloads to and from orbit, and is also the world's most reliable launch system. The design, now almost three decades old, is still state-of-the-art in many areas, including computerized flight control, airframe design, electrical power systems, thermal protection system, and main engines. This significant new study of the decision to build the space shuttle explains the shuttle's origin and early development. In addition to internal NASA discussions, this work details the debates in the late 1960s and early 1970s among policymakers in Congress, the Air Force, and the Office of Management and Budget over the roles and technical designs of the shuttle. Examining the interplay of these organizations with sometimes conflicting goals, the author not only explains how the world's premier space launch vehicle came into being, but also how politics can interact with science, technology, national security, and economics in national government.

**Outpost in Orbit** DAVID J. GODWIN SHAYLER (ROBERT.), Robert Godwin, 2018-10 The story of the space station encompasses the efforts of thousands of people going back many generations and hailing from many different countries. The concept of a space station seems to have sprung forth fully-formed in the mind of Edward Everett Hale in the summer of 1869. In his short story *The Brick Moon* Hale concluded that an orbiting manned space station could provide a totally new reference point which ships captains could use for navigation. Hale went on to become the chaplain in the United States' Senate and in 2019 we will be celebrating the sesquicentennial of his story. We will also be celebrating the 20th anniversary of the extraordinary International Space Station. The International Space Station represents what can happen when people from different backgrounds and different cultures come together with parallel dreams and aspirations. The ISS exists because of Russian mathematicians, American doctors, German scientists, Canadian engineers, British physicists, Japanese roboticists, Italian mechanics swap any of the occupations with any of the nationalities (or almost any other) and it still holds true. The list goes on and on. This truly astonishing feat of human ingenuity would not exist without the contributions and insights of people from almost every walk of life going all the way back to Isaac Newton. In this anniversary tribute the reader is taken through a pictorial history of the space station which is unprecedented in its scope. Beginning with Hale it takes the reader through over 100 space stations designed by American, Russians, German and Brits before taking you aboard the magnificent ISS using hundreds of pictures, many never

published before. This 320 page full colour book was created with the assistance of the National Aeronautics and Space Administration which provided unprecedented access to engineers, managers, astronauts and historians. Interviews were conducted with retirees and pioneers as well as the principals from NASA, the Russian Space Agency, the European Space Agency, the Canadian Space Agency and the Japanese Space Agency to create a unique insight into the trials and triumphs of working on the ISS. Featuring over 800 colour images running all the way from Tsiolkovsky's designs in the early 20th century to the completed International Space Station, some of the people featured in the book include Robert Gilruth, James Webb, Wernher von Braun, Hermann Oberth, JD Bernal, Krafft Ehrlicke, Dan Goldin, Victor Blagov, Alan Thirkettle, Chiaki Mukai, Arthur C Clarke, Hermann Koelle, Bonnie Dunbar, Frank Williams, Vladimir Chelomei, Sergei Krikalev, William Shepard, Lynn Cline, Chris Hadfield, Takao Doi, Jean Olivier, Robert Crippen, Dmitri Kondratyev, Dave Williams, Robert Thirsk, Michael Foale. James Beggs, Owen Garriot, Kent Rominger, Henry Hartsfield, Bob Cabana, Peggy Whitson, Kathy Sullivan, Konstantin Feoktistov, and many more.

*Falling to Earth* Al Worden, Francis French, 2011-07-26 As command module pilot for the Apollo 15 mission to the moon in 1971, Al Worden flew on what is widely regarded as the greatest exploration mission that humans have ever attempted. He spent six days orbiting the moon, including three days completely alone, the most isolated human in existence. During the return from the moon to earth he also conducted the first spacewalk in deep space, becoming the first human ever to see both the entire earth and moon simply by turning his head. The Apollo 15 flight capped an already-impressive career as an astronaut, including important work on the pioneering Apollo 9 and Apollo 12 missions, as well as the perilous flight of Apollo 13. Nine months after his return from the moon, Worden received a phone call telling him he was fired and ordering him out of his office by the end of the week. He refused to leave. What happened in those nine months, from being honored with parades and meetings with world leaders to being unceremoniously fired, has been a source of much speculation for four decades. Worden has never before told the full story around the dramatic events that shook NASA and ended his spaceflight career. Readers will learn them here for the first time, along with the exhilarating account of what it is like to journey to the moon and back. It's an unprecedentedly candid account of what it was like to be an Apollo astronaut, with all its glory but also its pitfalls.
