*Paper Astronaut* Juliette Cezzar, 2009-06-23 From the creator of *Paper Pilot* and *Paper Captain*, *Paper Astronaut* is a beautifully illustrated voyage into deep space, combining stunning archival photographs and colorful technical drawings with expertly designed die-cut models that readers can actually cut out and assemble. Published for the fortieth anniversary of the moon landing in 1969—and introduced by Buzz Aldrin—the book includes histories of twenty feats of aeronautic engineering drawn from half a century of space programs around the world, from Apollo 11 to the Soviet space station Mir and China's Shenzou 7 capsule, and featuring the most iconic designs of fifty years of space exploration. Each spacecraft is accompanied by amazing stories, fascinating facts and statistics about the universe around them, and mesmerizing photographs of the vessels in space. Sixty-four pages of the book are devoted to finely crafted die-cut paper models of the featured rockets, presented with clear instructions for assembly and helpful advice for deploying your galactic fleet.

**Modeling Ships and Space Craft** Gina Hagler, 2012-10-09 *Modeling Ships and Space Craft: The Science and Art of Mastering the Oceans and Sky* begins with the theories of Aristotle and Archimedes, moving on to examine the work of Froude and Taylor, the early aviators and the Wright Brothers, Goddard and the other rocket men, and the computational fluid dynamic models of our time. It examines the ways each used fluid dynamic principles in the design of their vessels. In the process, this book covers the history of hydrodynamic (aero and fluid) theory and its progression – with some very accessible science examples – including seminal theories. Hydrodynamic principles in action are also explored with examples from nature and the works of man. This is a book for anyone interested in the history of technology – specifically the methods and science behind the use of scale models and hydrodynamic principles in the marine and aeronautical designs of today.

hope for survival, is a suicidal catlike alien named Cephean. Only a compatible rigger team, their visions meshed in psychic unity, can safely harness the turbulent currents of the Flux—and Carlyle's ship is sailing inexorably toward the deadly maelstrom of the Hurricane Flume. For even a chance at survival, he needs Cephean's help. But the price for that is a complete merging of minds and memories. And Carlyle, at war with his own past, dreads that union more than death itself. A grand space adventure, from the Nebula-nominated author of *Eternity's End* and *The Chaos Chronicles*.

"Learning to communicate, to accept change, to understand the past, to express intimacy become rites of passage for the human Gev Carlyle and his felineoid cynthian crewmate Cephean." –Publishers Weekly

**Moon Rush** Leonard David, 2019-05-07 Veteran space journalist digs into the science and technology--past, present, and future--central to our explorations of Earth's only satellite, the space destination most hotly pursued today. In these rich pages, veteran science journalist Leonard David

explores the moon in all its facets, from ancient myth to future Moon Village plans. Illustrating his text with maps, graphics, and photographs, David offers inside information about how the United States, allies and competitors, as well as key private corporations like Moon Express and Jeff Bezos's Blue Origin, plan to reach, inhabit, and even harvest the moon in the decades to come. Spurred on by the Google Lunar XPRIZE--\$20 million for the first to get to the moon and send images home--the 21st-century space race back to the moon has become more urgent, and more timely, than ever. Accounts of these new strategies are set against past efforts, including stories never before told about the Apollo missions and Cold War plans for military surveillance and missile launches from the moon. Timely and fascinating, this book sheds new light on our constant lunar companion, offering reasons to gaze up and see it in a different way than ever before.

**Militarizing Outer Space** Alexander C.T. Geppert, Daniel Brandau, Tilmann Siebeneichner, 2020-12-02 Militarizing Outer Space explores the dystopian and destructive dimensions of the Space Age and challenges conventional narratives of a bipolar Cold War rivalry. Concentrating on weapons, warfare and violence, this provocative volume examines real and imagined endeavors

of arming the skies and conquering the heavens. The third and final volume in the groundbreaking "European Astroculture trilogy, "Militaryizing Outer Space zooms in on the interplay between security, technopolitics and knowledge from the 1920s through the 1980s. Often hailed as the site of heavenly utopias and otherworldly salvation, outer space transformed from a promised sanctuary to a present threat, where the battles of the future were to be waged. Astroculture proved instrumental in fathoming forms and functions of warfare's futures past, both on earth and in space. The allure of dominating outer space, the book shows, was neither limited to the early twenty-first century nor to current American space force rhetorics.
