**Modeling Ships and Space Craft** Gina Hagler,2012-10-09 *Modeling Ships and Space Craft: The Science and Art of Mastering the Oceans and Sky* begins with the theories of Aristotle and Archimedes, moving on to examine the work of Froude and Taylor, the early aviators and the Wright Brothers, Goddard and the other rocket men, and the computational fluid dynamic models of our time. It examines the ways each used fluid dynamic principles in the design of their vessels. In the process, this book covers the history of hydrodynamic (aero and fluid) theory and its progression – with some very accessible science examples – including seminal theories. Hydrodynamic principles in action are also explored with examples from nature and the works of man. This is a book for anyone interested in the history of technology – specifically the methods and science behind the use of scale models and hydrodynamic principles in the marine and aeronautical designs of today.

*Paper Astronaut* Juliette Cezzar,2009-06-23 From the creator of *Paper Pilot* and *Paper Captain*, *Paper Astronaut* is a beautifully illustrated voyage into deep space, combining stunning archival photographs and colorful technical drawings with expertly designed die-cut models that readers can actually cut out and assemble. Published for the fortieth anniversary of the moon landing in 1969—and introduced by Buzz Aldrin—the book includes histories of twenty feats of aeronautic engineering drawn from half a century of space programs around the world, from Apollo 11 to the Soviet space station Mir and China's Shenzhou 7 capsule, and featuring the most iconic designs of fifty years of space exploration. Each spacecraft is accompanied by amazing stories, fascinating facts and statistics about the universe around them, and mesmerizing photographs of the vessels in space. Super Paper Airplanes Norman Schmidt,1995 Offers instructions for making eighteen different paper airplanes, and discusses the background of each design.

**Scale Spacecraft Modelling** Mat Irvine,2007-02-01 Rockets and spacecraft were among the very first models made as commercial kits, and although never as numerous as aircraft, ships or road vehicles, the many kits produced over the years provide a fascinating niche in the world of model-making. The build-ups in this book reflect the current situation with spacecraft modelling; although there are still a number of conventional all-plastic kits available, there is also a growing range that uses more specialist materials, especially resins. The book explains the various techniques required when dealing with these non-traditional materials. *Scale Spacecraft Modelling* also covers scratch building and adaptation, the techniques needed to make those pristine models really dirty to match the ones you see in the movies, and the design and construction of realist dioramas and settings.

Star Rigger's Way Jeffrey A. Carver,2014-11-11 Adrift in space! His shipmates dead, star rigger Gev Carlyle is adrift in the Flux, the subjective hyperspace that carries ships between the stars. His lone companion, and sole hope for survival, is a suicidal catlike alien named Cephean. Only a compatible rigger team, their visions meshed in psychic unity, can safely harness the turbulent currents of the Flux—and Carlyle's ship is sailing inexorably toward the deadly maelstrom of the Hurricane Flume. For even a chance at survival, he needs Cephean's help. But the price for that is a complete merging of minds and memories. And Carlyle, at war with his own past, dreads that union more than death itself. A grand space adventure, from the Nebula-nominated author of Eternity's End and The Chaos Chronicles. Reviews: "A novel of character-change, maturation, abandonment of illusions and discovering-of-self . . . it's an engaging science fantasy and the novel will leave you saying to yourself, 'Yeah!'" — Richard E. Geis, Galaxy "Learning to communicate, to accept change, to understand the past, to express intimacy become rites of passage for the human Gev Carlyle and his felinoid cynthian crewmate Cephean." —Publishers Weekly

**Digital Apollo** David A. Mindell,2011-09-30 The incredible story of how human pilots and automated systems worked together to achieve the ultimate achievement in flight—the lunar landings of NASA's Apollo program As Apollo 11's Lunar Module descended toward the moon under automatic control, a program alarm in the guidance computer's software nearly caused a mission abort. Neil Armstrong responded by switching off the automatic mode and taking direct control. He stopped monitoring the computer and began flying the spacecraft, relying on skill to land it and earning praise for a triumph of human over machine. In Digital Apollo, engineer-historian David Mindell takes this famous moment as a starting point for an exploration of the relationship between humans and computers in the Apollo program. In each of the six Apollo landings, the astronaut in command seized control from the computer and landed with his hand on the stick. Mindell recounts the story of astronauts' desire to control their spacecraft in parallel with the history of the Apollo Guidance Computer. From the early days of aviation through the birth of spaceflight, test pilots and astronauts sought to be more than "spam in a can" despite the automatic controls, digital computers, and software developed by engineers. Digital Apollo examines the design and execution of each of the six Apollo moon landings, drawing on transcripts and data telemetry from the flights, astronaut interviews, and NASA's extensive archives. Mindell's exploration of how human pilots and automated systems worked together to achieve the ultimate in flight—a lunar landing—traces and reframes the debate over the future of humans and automation in space. The results have implications for any venture in which human roles seem threatened by automated systems, whether it is the work at our desktops or the future of exploration.
