The Lavochkin La-7 Dariusz Paduch,2022-09-30 La-7 Soviet single-engine, single-seat fighter aircraft of the World War II period. Developed in the design bureau of S. A. Lavochkin as a successor to the Ła-5FN aircraft. The La-7 was a development of the La-5 design. Both the sizes and shapes of the two aircraft models differed slightly.

Lavochkin La-5 In Profile & Scale Erik Pilawskii,2017-09-28 Volume no.3 of the Profile & Scale series details the Lavochkin La-5 family of fighters as never seen before. One hundred La-5 examples are faithfully documented in full-colour profile. Moreover, the work contains many pages of original, never previously published 1:48 scale line drawings of the entire La-5 family. These line drawings are the culmination of nearly 25 years' dedicated work on the La-5, and should present the most complete, accurate and illuminating scale work regarding the aircraft at the present time. The book presents many production, development and detail facts about the La-5 family, some never before illustrated. A guide is included to explain the curious Gor'ki Type naming system, as well as diagrams and text detailing Gor'ki camouflage.

Lavochkin Fighters of the Second World War Jason Moore ,2017-03-13 The Lavochkin fighters remain little known in the West, although with the Yakovlev fighter series they were the backbone of the Red Air Force fighter force during the Second World War. The author rectifies that with this comprehensive history of these fighters. With this book he describes in great detail the three main variants of the Lavochkin fighter series during the Second World War: the only partially successful LaGG-3 inline-engined fighter, the successful radial-engined La-5 fighter, and the superb radial engined La-7 fighter, one of the best piston-engined fighter aircraft of the entire Second World War. Both the design and history of these fighters are featured, including how the mediocre inline engined LaGG-3 was turned into a top notch fighter by the replacement of the Klimov inline engine by the Shvetsov M-82 radial engine. Besides describing the wartime designs he includes a section on the postwar successors to the Second World War fighters, the completely new all metal La-9 and La-11, which saw extensive postwar service. Accurate color profiles illustrate all variants.

Lawoczkin La-5 Vol. I Dariusz Paduch,2021-09-30 This monograph describes the La-5 - Soviet single-engine single-seat fighter from World War II. The plane was developed in the S.A. design office. The Lavochkin was a development version and successor of the LaGG-3, a wooden low wing with an inline engine. It was one of the best fighter planes in Soviet aviation and the first to compete on an equal footing with the German Messerschmitt Bf 109.

Lawoczkin La-5 Vol.II Dariusz Paduch,2022-06-30 The La-5 is a Soviet single-engine single-seat fighter from World War II. The plane was developed in the S.A. design office. Lavochkin as a development version and successor of the LaGG-3, a wooden low wing with an in-line engine. It was one of the best fighter planes of the Soviet aviation and the first to compete on an equal footing with the German Messerschmitt Bf 109.

Soviet Fighters of the Second World War Jason Nicholas Moore,2021-07-30 The Red Air Force had just started to re-equip with modern monoplane fighters when the Germans opened Operation Barbarossa, the invasion of the Soviet Union. Hundreds of fighters were destroyed in the first few days, but many of these were obsolete biplanes. Soviet Fighters of the Second World War details fighter development from the dark days of Barbarossa to eventual triumph over Berlin. Starting with outdated aircraft such as the Polikarpov Po-2 biplane and monoplane fighters, the Soviets then settled on two main lines of development: the inline-engine LaGG-3 and its radial-engine derivatives, the La-5 and La-7, and the inline-engine Yakovlev fighters, which were produced in greater numbers than any other series of fighters. Not only are these aircraft accurately described, but experimental fighters are also dealt with. In addition, colour profiles illustrate these aircraft in terms of design, camouflage and markings. From the I-15bis biplane of the late 1930s to the superb La-7 and Yak-3 fighters of the last year of the war, all Red Air Force fighters are covered in this comprehensive volume.

You Suck at Racing Ian Korf,2016-05-12 A lot of books on driving are written by professional racers who assume you too want to be a professional racer. Not this book. It's written by a hobbyist who suggests you keep your day job. Besides, it's much more fun being an enthusiastic amateur than a jaded professional (just ask someone in the sex industry). This book is designed to help the average driver make the transition from commuter to safe road racer in as few pages as possible. I wrote this book because it's what I would have wanted to read when I first became interested in track driving: succinct, nerdy, practical, and occasionally diverting. It is not intended as a definitive tome or a work of art. It's more like a sandwich: convenient and nourishing.

Soviet Cold War Fighters Alexander Mladenov,2017-04-20 Beautifully illustrated with many rare and unpublished photographs, Soviet Cold War Fighters looks at the main development periods of Soviet fighter designs and covers all the important features and developments for each - a total of four generations of fighter were developed from the late 1940s to the early 1980s - that witnessed the most iconic and powerful fighters such as the legendary MiG-15, MiG-21, Tu-128, Su-9, MiG-23, MiG-25 reach for the skies, followed by the modern day MiG-29, MiG-31 and Su-27, which strike fear in the West for their phenomenal weaponry and blistering performance. All aircraft are described in detail with facts and figures, including their weapons and instances of combat employment, as well as explaining how the Cold War drastically changed Soviet fighter design to counter the West. Researched and written by Alexander Mladenov, a leading aviation journalist, this is a highly detailed testament to leading Soviet fighter design and development.

Stalin's Eagles Hans D. Seidl,1998 Stalin's Eagles is the most complete and detailed book ever published on the Soviet aces. All of the great names are here: Kozhedub, Pokryshkin, Rechkalov, Koldunov, Popkov and numerous others whose thrilling exploits were an inspiration to their comrades, and who handily outscored the top American and British aces. Hundreds of portraits illuminate the lives of many aces, most unknown to western readers, and the desperate struggles of these outstanding fighter pilots who in the end were to make the skies above Eastern Europe their fiefdom. The history of the Soviet fighter command in World War II began in tragedy with the slaughter of inexperienced squadrons by the triumphant Luftwaffe. Read here of their dramatic recovery and the terrible losses of the Luftwaffe at the hands of Russian elite pilots as they were winning complete supremacy in the air. In almost four years of continuous action, the Soviet air forces were credited with destroying over 43,000 enemy aircraft in aerial combat producing some 800 aces with 15 or more kills. Illustrated with over 300 photographs, many taken from the personal collections of veteran pilots, and supplemented by exhaustive statistical information this unique record represents a major research effort and will prove fascinating to all who have an interest in the history of aerial warfare. For the first time the deeds and feats of the Shturmovik aces - the tank hunters and assault aircraft of the Soviet Air Force - are recorded in detail, and an entire chapter presents the history of all Soviet fighter units. Little known in the West, Soviet pilots flew over Korea and many achieved ace status - all are named here with details of their careers and aerial victories. Forewords are by twice hero of the Soviet Union V.I. Popkov, himself an ace with 41 kills in World War II and three more in Korea, and Gnther Rall, number three ace of all time with 275 aerial victories. 470 + b/w photographs

Sea Harrier Over the Falklands Commander 'Sharkey' Ward, DSC, AFC, RN,1993-08-05 Sharkey Ward commanded 801 Naval Air Squadron, HMS Invincible, during the Falkland War of April to June 1982, and was senior Sea Harrier adviser to the command on the tactics, direction and progress of the air war. He flew over 60 war missions, achieved three air-to air kills, and took part in or witnessed a total of ten kills; he was also the leading night pilot, and was decorated with the Distinguished Service Cross for gallantry. But what, after all, could 20 Sea Harriers, operating from a flight-deck bucketing about in the South Atlantic, do against more than 200 Argentine military aircraft flown by pilots who, as the raids against the British shipping proved, displayed enormous skill and almost suicidal gallantry? The world knows the answer - now. What is puzzling, therefore, is this book's truthful depiction of the attitudes of some senior non-flying naval officers, and of the RAF, towards the men (and indeed the machine) that made possible the victory in the Falklands. This first-hand account charts, in detail, the naval pilots' journey to the South Atlantic, and how they took on and triumphantly conquered the challenges they faced. It is a dramatic story, leavened with accounts of the air-to-air fighting and of life in a squadron at sea and on a war footing. But it is also a tale of inter-Service rivalry, bureaucratic interference, and the less-than-generous attitudes of a number of senior commanders who should certainly have known better; indeed, some of them might even have lost the war through a lack of understanding of air warfare. The author attempts to put the record straight.

Allied Armored Fighting Vehicles 1:72 Scale George Bradford,2009 Filled with 1:72-scale drawings of armored vehicles from the U.S., Britain, Canada, and Russia, including: M4 Sherman medium tank (U.S.) T1E3 Aunt Jemima mine exploder (U.S.) M18 Hellcat tank destroyer (U.S.) Mk VI Crusader cruiser tank (Britain) Crocodile flamethrower (Britain) Ram I cruiser tank (Canada) T-34 medium tank (Russia) SU-100 tank destroyer (Russia) And dozens more . . .

Focke Wulf Jet Fighters Justo Miranda,2017-12-14 The biggest success of the Focke Wulf company during the Second World War was the choice of a radial engine for the Fw 190 fighter, in this way avoiding to compete against Messerschmitt for the in line engines. The decision of the Oberkommando der Luftwaffe to assign the few turbojets available to the Messerschmitt and Arado firms and the discovery of the terrible aerodynamic effect known as compressibility buffeting by mid-1942, made the life of fighter designers of the time very interesting. The Kurt Tank team proposed to install a centrifugal turbojet of his design in the nose of an Fw 190 A/3 with the intention of replacing it with a Jumo 004 B when available in 1943. Several designs followed that were able to use all turbojets, turboprops, ramjets and rocket engines, either projected or at their disposal. They constitute the documental foundation of this book. After failing in the TL Jagdfleugzeug contests in March 1943, Volksflugzeug in September 1944 and Hochleitungs Nachtjäger in January 1945, Focke Wulf could finally overcome its competitors with the great Jägernotprogramm design Ta 183. Although it was too late to intervene in the Second World War, it served as inspiration for numerous designs of other countries during the first years of the Cold War.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Hitler's Final Fortress Richard Hargreaves,2015-04-01 In early 1945, the Red Army plunged into the Third Reich from the east, rolling up territory and crushing virtually everything in its path, with one exception: the city of Breslau, which Hitler had declared a fortress-city, to be defended to the death. This book examines in detail the notorious four-month siege of Breslau. • The first full-length English-language account of the bloody siege • Chronicles the bitter struggle as the Red Army encircled Breslau and eventually pillaged the city, taking savage retribution on the survivors • Details the brutal methods used by the city's Nazi leaders to keep German troops fighting and maintain order

Air Power at the Battlefield Dr Ian Gooderson,2013-05-13 Ian Gooderson presents a study of close air support in World War II, with the analysis focusing on the use of tactical air power by British and American forces during the campaigns in Italy and northwestern Europe between 1943 and 1945.

Wellington's Scapegoat Archie Hunter,2003-07-22 Lieutenant Colonel Charles Bevan was the key figure in an extraordinary, controversial and ultimately tragic episode during the Peninsula War. He was the commanding officer held responsible for the dramatic night escape of the French garrison from Almeida over a vital bridge. For this disaster he incurred the extreme wrath of the Duke of Wellington but whether this was fair remains highly debatable.

Hidden Tibet Sergius L. Kuzmin,2011-01-01 This book traces the history of Tibetan statehood from ancient times to our days, describes the life of the Tibetans at the times of Feudalism and Socialism, the coercive inclusion of Tibet into People’s Republic of China, the suppression of the national liberation movement, the Cultural Revolution, and subsequent reforms. Many pictures and data concerning these events are being published for the first time.

Soviet Combat Aircraft of the Second World War: Twin-engined fighters, attack aircraft and bombers E. Gordon,Yefim Gordon,Dmitriï Khazanov,1999-04 Arranged by designers, this second installment of a two-volume set includes the aircraft of such famous names as Ilyushin, Petlyakov, and Tupolev, as well as lesser-known types. In preparing this volume, the authors combed untapped archives in the Soviet Union to uncover a wealth of data that rewrites longheld Western beliefs.

Soviet Bombers of the Second World War Jason Nicholas Moore,2019-09-08 Soviet bombers were a varied lot during the Second World War, ranging from single-engined biplanes such as the 1920's era Polikarpov U-2 to the excellent and modern twin-engined Tu-2 medium bomber. Although the use of four-engined strategic bombers was mostly limited to use of the huge Pe-8 bomber, the Soviets used many other aircraft for both strategic and tactical bombing. As the bombers of the Red Air Force were mainly tasked with supporting the Red Army, most of the bombers were used for tactical bombing, attacking tanks, troop convoys, trains, and airfields. This book will deal with both strategic bombers and tactical bombers, but will concentrate on the smaller tactical bombers, as this is where the Red Air Force's emphasis lay. Such types as the Il-4, the Su-2, the aforementioned Tu-2, and the most important bomber of all, the Il-2 Shturmovik attack bomber, will be described in great detail, including not only details on the aircraft themselves, but how they were deployed in combat. The one truly strategic bomber, the Pe-8, will not be forgotten, and neither will the comparatively tiny U-2 biplane, which was so effective in its use as a night-time nuisance raider that the Germans copied the tactic wholesale. Accurate colour profiles in some number will accompany the text in this comprehensive work on Soviet bombers.
