Tatra - The Legacy of Hans Ledwinka Ivan Margolius, John G.

Henry, 2020-01-28 Tatra – The Legacy of Hans Ledwinka is the story of the Tatra company, which originated in the Central European country of Czechoslovakia. It is a tale of great innovation and avant-garde design in automobile engineering. It is also the story of one man – Hans Ledwinka – and his visionary concepts which have become highly influential, although often undervalued, contributions to the development of car technology. Until now, Hans Ledwinka's talent has hardly been recognised; in retrospect, he can be judged equal to car designers such as Benz, Daimler and Porsche, whose endeavours have been fully recorded many times over. With his revolutionary Tatra cars, Ledwinka consistently pushed back the frontiers of automobile construction, and it's certain that without his inspiration, the Volkswagen in its air-cooled rear-engined form would perhaps never have been conceived. This book suggests that Ledwinka played a greater part in this development than has previously been appreciated. The authors have covered the full history of the Tatra company, which is one of the oldest factories in continuous automobile manufacture, dating back to the 19th century. By doing this, they have placed both

Ledwinka and the Czechoslovak Tatra company in their rightful place in the history of car design, and provided a fully comprehensive assessment of the influence of Tatra car designs and their inspired creator. The text of this larger format 2nd edition has been fully revised and updated since the 1990 edition. This new edition also contains many additional illustrations. The book also has a new foreword, written by Norman Foster, the British architect, and proud owner of a Tatra T87, who pays tribute to the aesthetic qualities of this design classic and captures the fascination of both designers and motor historians with the development of Tatra.

India and Central Europe Rajendra K. Jain, 2021-09-01 This book explores the transformation of India's relations with Central and Eastern Europe from being a subset of Indo-Soviet relations during the Cold War to the rediscovery and rebuilding of relations with the region almost from scratch in the post-Cold War era. It examines how the combination of Brexit, the rise of China and India's expanding geo-economic interests in Europe has led the Narendra Modi government to contemplate relations with Central Europe through a more strategic lens and treat the region as an autonomous element within India's foreign policy rather than a

footnote of its relations with other great powers. Fulfilling a long-felt gap in existing literature, this volume examines India's political, economic, investment, defence and cultural relations with the Visegrad Four (the Czech Republic, Hungary, Poland and Slovakia). It analyzes Indian perceptions of Central Europe and explores prospects of New Delhi's political and economic engagement with the region. The painstakingly compiled appendices on the exchange of bilateral visits and agreements between India and the Visegrad Four would be of immense use as a handy reference to scholars, policy-makers, and other interested persons and institutions.

Road Vehicle Dynamics Georg Rill, 2011-09-21 In striving for optimal comfort and safety conditions in road vehicles, today's electronically controlled components provide a range of new options. These are developed and tested using computer simulations in software in the loop or hardware in the loop environments-an advancement that requires the modern automotive engineer to be able to build ba

Dynamic Modeling and Control of Engineering Systems

Bohdan T. Kulakowski, John F. Gardner, J. Lowen

Shearer, 2014-04-30 This textbook is ideal for an undergraduate course in Engineering System Dynamics and Controls. It is intended to provide the reader with a thorough understanding of the process of creating mathematical (and computer-based) models of physical systems. The material is restricted to lumped parameter models, which are those models in which time is the only independent variable. It assumes a basic knowledge of engineering mechanics and ordinary differential equations. The new edition has expanded topical coverage and many more new examples and exercises.

Dynamics of Railway Bridges L. Fryba, 1996-01-01 Provides a comprehensive survey of the dynamic stresses in railway bridges under moving vehicles and summarizes important theoretical and experimental results which has been obtained from various research programs dealing with European railway bridges.

National Infrastructure Protection Plan United States.

Department of Homeland Security, 2006

Handbook of Vehicle-Road Interaction David

Cebon, 2000-01-01 This handbook discusses tyre-road contact forces generated by heavy vehicles covering their influence on

road surface and bridge response and damage, as well as ways of regulating and improving vehicles so as to minimize road damage.;The main incentive for understanding vehicle-road interaction is the possibility of reducing the road damage caused by heavy vehicles and the very high associated costs. This may be achieved by highway authorities, through improved design and construction of roads; by government agencies, through regulations intended to encourage the use of more road-friendly vehicles; or by vehicle engineers, through design of improved vehicle configurations and suspensions, which minimize road damage.;The book provides a unified mechanistic approach to the entire subject, covering vehicle dynamics; dynamic tyre forces; weigh-in-motion; pavement and bridge response; damage mechanisms of paving materials; vehicle-guideway interaction; suspension design to minimize road damage; and assessing road damaging potential of vehicles for regulatory purposes. It includes 25 literature reviews, covering topics from asphalt deformation to weigh-in-motion, and citing over 500 references. In addition, it discusses both the fundamental mechanics of the mechanical and civil engineering systems, as well as practical and implementation issues.

Modelling and Analysis of Sustainability Related Issues in New

Era Wen-Hsien Tsai, 2019-06-24 The purpose of this Special Issue is to investigate topics related to sustainability issues in the new era, especially in Industry 4.0 or other new manufacturing environments. Under Industry 4.0, there have been great changes with respect to production processes, production planning and control, quality assurance, internal control, cost determination, and other management issues. Moreover, it is expected that Industry 4.0 can create positive sustainability impacts along the whole value chain. There are three pillars of sustainability, including environmental sustainability, economic sustainability, and social sustainability. This Special Issue collects 15 sustainability-related papers from various industries that use various methods or models, such as mathematical programming, activity-based costing (ABC), material flow cost accounting, fuel consumption model, artificial intelligence (AI)-based fusion model, multi-attribute decision model (MADM), and so on. These papers are related to carbon emissions, carbon tax, Industry 4.0, economic sustainability, corporate social responsibility (CSR), etc. The research objects come from China, Taiwan, Thailand, Oman, Cyprus, Germany, Austria, and Portugal. Although the research presented in this

Special Issue is not exhaustive, this Special Issue provides abundant, significant research related to environmental, economic, and social sustainability. Nevertheless, there still are many research topics that require our attention to solve problems of sustainability.

Dynamics in Engineering Structures Vladimír Koloušek, 1973

Modern Trends in Cartography Jan Brus, Alena Vondrakova, Vit Vozenilek, 2014-12-02 The fast exchange of information and knowledge are the essential conditions for successful and effective research and practical applications in cartography. For successful research development, it is necessary to follow trends not only in this domain, but also try to adapt new trends and technologies from other areas. Trends in cartography are also quite often topics of many conferences which have the main aim to link research, education and application experts in cartography and GIS&T into one large platform. Such the right place for exchange and sharing of knowledge and skills was also the CARTOCON2014 conference,

which took place in Olomouc, Czech Republic, in February 2014 and this book is a compilation of the best and most interesting contributions. The book content consists of four parts. The first part New approaches in map and atlas making collects studies about innovative ways in map production and atlases compilation. Following part of the book Progress in web cartography brings examples and tools for web map presentation. The third part Advanced methods in map use includes achievement of eye-tracking research and users' issues. The final part Cartography in practice and research is a clear evidence that cartography and maps played the significant role in many geosciences and in many branches of the society. Each individual paper is original and has its place in cartography.

Geo-information Mathias Lemmens, 2011-08-03 Geomatics, the handling and processing of information and data about the Earth, is one geoscience discipline that has seen major changes in the last decade, as mapping and observation systems become ever more sensitive and sophisticated. This book is a unique and in-depth survey of the field, which has a central role to play in tackling a host of environmental issues faced by society. Covering all three strands of geomatics - applications, information technology and

surveying - the chapters cover the history and background of the subject, the technology employed both to collect and disseminate data, and the varied applications to which geomatics can be put, including urban planning, assessment of biodiversity, disaster management and land administration. Relevant professionals, as well as students in a variety of disciplines such as geography and surveying, will find this book required reading. This rapidly developing field uses increasingly complex and accurate systems. Today, technology enables us to capture geo-data in full 3D as well as to disseminate it via the Web at the speed of light. We are able to continuously image the world from space at resolutions of up to 50 cm. Airborne LiDAR (laser surveying) sensors can be combined with digital camera technology to produce geometrically correct images of the Earth's surface, while integrating these with large-scale topographic maps and terrestrial as well as aerial images to produce 3D cityscapes that computer users can explore from their desktops.

The Use of Aerial Photographs Richard D. Burr, 1976

UAT Defined Rob Cimperman, 2006-11-28 This is the eBook version of the printed book. This digital Short Cut provides a concise and supremely useful guide to the emerging trend of User

Acceptance Testing (UAT). The ultimate goal of UAT is to validate that a system of products is of sufficient quality to be accepted by the users and, ultimately, the sponsors. This Short Cut is unique in that it views UAT through the concept that the user should be represented in every step of the software delivery lifecycle--including requirements, designs, testing, and maintenance--so that the user community is prepared, and even eager, to accept the software once it is completed. Rob Cimperman offers an informal explanation of testing, software development, and project management to equip business testers with both theory and practical examples, without the overwhelming details often associated with books written for professional testers. Rather than simply explaining what to do, this resource is the only one that explains why and how to do it by addressing this market segment in simple, actionable language. Throughout the author's considerable experience coordinating UAT and guiding business testers, he has learned precisely what testers do and do not intuitively understand about the software development process. UAT Defined informs the reader about the unfamiliar political landscape they will encounter. Giving the UAT team the tools they need to comprehend the process on their own saves the IT staff

from having to explain test management from the beginning. The result is a practice that increases productivity and eliminates the costs associated with unnecessary mistakes, tedious rework, and avoidable delays. Chapter 1 Introduction Chapter 2 Defining UAT–What It Is...and What It Is Not Chapter 3 Test Planning–Setting the Stage for UAT Success Chapter 4 Building the Team–Transforming Users into Testers Chapter 5 Executing UAT–Tracking and Reporting Chapter 6 Mitigating Risk–Your Primary Responsibility

The Veiled Web Catherine Asaro,2022-09-27 “A near-future layering of East and West, of religion and technology . . . and of love and its loss—all woven into an intriguing tapestry.” —Diana Gabaldon, bestselling author of the Outlander series Winner of the Homer Award for Best Science Fiction Novel A renowned prima ballerina, Lucia del Mar is far more comfortable expressing herself through dance than with words. Shy and introverted, she spends most of her spare time on her laptop. Still, Lucia’s job forces her out of her comfort zone, which is how she winds up at a White House reception where she meets Rashid al-Jazari, the wealthy CEO of a multinational corporation. Although attracted to him, Lucia can’t help but feel awkward and shrugs off their encounter as

a one-time event. Not realizing he feels a similar attraction, she never imagines Rashid will seek out her performances; he is the last person she expects to see when her dance company travels to Italy. Their reunion takes an even more unexpected turn when they're both drugged and kidnapped. Although they overcome their abductors, it leaves them stranded in North Africa. For her own safety, Lucia agrees to marry Rashid, at least for the time being. As she recovers at his family compound in Morocco, reeling from their brush with danger, she struggles to fit into a culture she knows nothing about—and to deal with her growing feelings for Rashid. At the same time, at his secret office there, Rashid is developing a dramatic leap forward in artificial intelligence combined with virtual reality. He finds himself plunged into a fight for control of his work against powerful international forces, and caught in the middle, Lucia is swept into that battle . . . “A terrific novel, ripping a path from today’s headlines to tomorrow’s realities.” —Robert J. Sawyer, Nebula Award-winning author

Vehicle-road Interaction Bohdan T. Kulakowski, 1994

Proceedings of a conference held in Santa Barbara, California, in May 1992. Topics include simulation and analysis of trucks using the program BAMMS, predicting vertical dynamic tire forces of

heavy trucks, factors affecting the design and use of the Texas Mobile Load Simulator, traction tests on an
