**Alex Wellerstein**

**The Lavochkin La-7** Dariusz Paduch, 2022-09-30 La-7 Soviet single-engine, single-seat fighter aircraft of the World War II period. Developed in the design bureau of S. A. Lavochkin as a successor to the La-5FN aircraft. The La-7 was a development of the La-5 design. Both the sizes and shapes of the two aircraft models differed slightly.

**Lavochkin Fighters of the Second World War** Jason Moore , 2017-03-13 The Lavochkin fighters remain little known in the West, although with the Yakovlev fighter series they were the backbone of the Red Air Force fighter force during the Second World War. The author rectifies that with this comprehensive history of these fighters. With this book he describes in great detail the three main variants of the Lavochkin fighter series during the Second World War: the only partially successful LaGG-3 inline-engined fighter, the successful radial-engined La-5 fighter, and the superb radial engined La-7 fighter, one of the best piston-engined fighter aircraft of the entire Second World War. Both the design and history of these fighters are featured, including how the mediocre inline engined LaGG-3 was turned into a top notch fighter by the replacement of the Klimov inline engine by the Shvetsov M-82 radial engine. Besides describing the wartime designs he includes a section on the postwar successors to the Second World War fighters, the completely new all metal La-9 and La-11, which saw extensive postwar service. Accurate color profiles illustrate all variants.

**Lavochkin's Piston-Engined Fighters (Red Star Series)** Yefim Gordon, 2003 The latest addition to the Red Star series addresses the formation and early years of OKB-301, the design bureau created by Semyon shortly before the outbreak of the Great Pacific War. This book describes in detail all the piston-engined fighters developed by OKB-301 starting with the LaGG-3, an aircraft that first saw service in the Winter War against Finland. The story continues with the legendary La-5 and La-7 which rendered sterling service during the war. For Soviet airmen these aircraft were what the Spitfire was to the RAF and the P-51 Mustang was to the Americans. They were a match for the Messerschmitt Bf109 and the Focke Wulf Fw190, and several pilots were awarded the decoration Hero of the Soviet Union for their exploits in these aircraft. The concluding chapters deal with the last of the line, the La-9 and the La-11, which saw combat in China and Korea in the late 1940s and early 1950s. Illustrated with numerous rare and previously unpublished photos drawn from Russian military archives, the book's color content will delight the aviation modeler and anyone interested in Soviet aviation in the World War II era. The colorful nose art, which many aircraft sported, is recorded as are Lavochkin fighters in the liveries of allies of the Soviet Union and captured aircraft in the colors of the enemies of the Soviets.

**LaGG & Lavochkin Aces of World War 2** George Mellinger, 2003-11-21 This book examines the LaGG family of fighters, that were amongst the first modern

piston-engined interceptors made available to the Red Air Forces in early 1941 and proved far better fighters than their radial-engined predecessors. Despite technical maladies and political interference from Moscow, the LaGG-3 matured into an effective fighter when flown to its strengths at low level. Many early Soviet aces were weaned on the LaGG-3, and if they survived the early massacres of 1941-42, they went on to fly the Lavochkin family of fighters. Indeed, the Lavochkin La-3, -5 and -7 were the fighters of choice for Heroes of the Soviet Union such as Ivan Kozhedub, who claimed 62 kills.

*Soviet Cold War Fighters* Alexander Mladenov, 2017-04-20 Beautifully illustrated with many rare and unpublished photographs, *Soviet Cold War Fighters* looks at the main development periods of Soviet fighter designs and covers all the important features and developments for each - a total of four generations of fighter were developed from the late 1940s to the early 1980s - that witnessed the most iconic and powerful fighters such as the legendary MiG-15, MiG-21, Tu-128, Su-9, MiG-23, MiG-25 reach for the skies, followed by the modern day MiG-29, MiG-31 and Su-27, which strike fear in the West for their phenomenal weaponry and blistering performance. All aircraft are described in detail with facts and figures, including their weapons and instances of combat employment, as well as explaining how the Cold War drastically changed Soviet fighter design to counter the West. Researched and written by Alexander Mladenov, a leading aviation journalist, this is a highly detailed testament to leading Soviet fighter design and development.

Soviet Fighters of the Second World War Jason Nicholas Moore, 2021-07-30 The Red Air Force had just started to re-equip with modern monoplane fighters when the Germans opened Operation Barbarossa, the invasion of the Soviet Union. Hundreds of fighters were destroyed in the first few days, but many of these were obsolete biplanes. Soviet Fighters of the Second World War details fighter development from the dark days of Barbarossa to eventual triumph over Berlin. Starting with outdated aircraft such as the Polikarpov Po-2 biplane and monoplane fighters, the Soviets then settled on two main lines of development: the inline-engine LaGG-3 and its radial-engine derivatives, the La-5 and La-7, and the inline-engine Yakovlev fighters, which were produced in greater numbers than any other series of fighters. Not only are these aircraft accurately described, but experimental fighters are also dealt with. In addition, colour profiles illustrate these aircraft in terms of design, camouflage and markings. From the I-15bis biplane of the late 1930s to the superb La-7 and Yak-3 fighters of the last year of the war, all Red Air Force fighters are covered in this comprehensive volume.

**Restricted Data** Alex Wellerstein, 2024-04-23 The first full history of US nuclear secrecy, from its origins in the late 1930s to our post-Cold War present. The American atomic bomb was born in secrecy. From the moment scientists first conceived of its possibility to the bombings of Hiroshima and Nagasaki and beyond, there were efforts to control the spread of nuclear information and the newly discovered scientific facts that made such powerful

weapons possible. The totalizing scientific secrecy that the atomic bomb appeared to demand was new, unusual, and very nearly unprecedented. It was foreign to American science and American democracy—and potentially incompatible with both. From the beginning, this secrecy was controversial, and it was always contested. The atomic bomb was not merely the application of science to war, but the result of decades of investment in scientific education, infrastructure, and global collaboration. If secrecy became the norm, how would science survive? Drawing on troves of declassified files, including records released by the government for the first time through the author's efforts, *Restricted Data* traces the complex evolution of the US nuclear secrecy regime from the first whisper of the atomic bomb through the mounting tensions of the Cold War and into the early twenty-first century. A compelling history of powerful ideas at war, it tells a story that feels distinctly American: rich, sprawling, and built on the conflict between high-minded idealism and ugly, fearful power.

**I-16 Rata** Oleg Pototskiy, 2021-08-31 This book introduces the reader to a remarkable fighter aircraft, that which had a great influence on both the pre-war development of Soviet aircraft, and the military developments that occurred in the first few months of the war between Germany and the USSR.

You Suck at Racing Ian Korf, 2016-05-12 A lot of books on driving are written by professional racers who assume you too want to be a professional racer. Not this book. It's written by a hobbyist who suggests you keep your

day job. Besides, it's much more fun being an enthusiastic amateur than a jaded professional (just ask someone in the sex industry). This book is designed to help the average driver make the transition from commuter to safe road racer in as few pages as possible. I wrote this book because it's what I would have wanted to read when I first became interested in track driving: succinct, nerdy, practical, and occasionally diverting. It is not intended as a definitive tome or a work of art. It's more like a sandwich: convenient and nourishing.

*TSR2 Precision Attack to Tornado* John Forbat, 2012-05-30 Included are details on the ground-breaking navigation and attack system, its Cold War context, its requirements and the development of ATF (advanced terrain following), and in-depth analysis of automatic flight control systems, analogue and digital simulations at Weybridge and the reconnaissance pack for mapping enemy territory. It finishes with a look at the final throes of TSR2's cancellation by the Labour government in 1965.

Soviet Tactical Aviation E. Gordon, Yefim Gordon, Dmitriy Komissarov, 2011 At its height during the Cold War, Soviet tactical aviation was a large force of fighter, bomber, and attack air regiments with a high degree of readiness - many units stationed outside the Soviet Union saw actual combat. But, even as progressively more refined jet aircraft came into service - Yak-23, MiG-17 fighters and IL-28 tactical bombers, the attack aviation units still flew outdated IL-10 piston-engined aircraft well into the 1950s. Soviet pilots in

combat over the People's Republic of China, North Korea, and Cuba, and their role in Eastern Europe combine with more than 500 color photographs, 50 color profiles, details of units, and insignia to give an in-depth look at this important era.

*Cold War at 30,000 Feet* Jeffrey A Engel, 2009-06-30 In a gripping story of international power and deception, Engel reveals the special relationship between the United States and Great Britain. As allies, they fought Communism; as rivals, they clashed over which would lead the Cold War fight. In the quest for sovereignty and hegemony, Engel shows that one important key was airpower, which created jobs, forged ties with the developing world, and ensured military superiority, ultimately affecting forever the global balance of power.

Hidden Tibet Sergius L. Kuzmin, 2011-01-01 This book traces the history of Tibetan statehood from ancient times to our days, describes the life of the Tibetans at the times of Feudalism and Socialism, the coercive inclusion of Tibet into People's Republic of China, the suppression of the national liberation movement, the Cultural Revolution, and subsequent reforms. Many pictures and data concerning these events are being published for the first time.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The

text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

*Focke Wulf Jet Fighters* Justo Miranda, 2017-12-14 The biggest success of the Focke Wulf company during the Second World War was the choice of a radial engine for the Fw 190 fighter, in this way avoiding to compete against Messerschmitt for the in line engines. The decision of the Oberkommando der

Luftwaffe to assign the few turbojets available to the Messerschmitt and Arado firms and the discovery of the terrible aerodynamic effect known as compressibility buffeting by mid-1942, made the life of fighter designers of the time very interesting. The Kurt Tank team proposed to install a centrifugal turbojet of his design in the nose of an Fw 190 A/3 with the intention of replacing it with a Jumo 004 B when available in 1943. Several designs followed that were able to use all turbojets, turboprops, ramjets and rocket engines, either projected or at their disposal. They constitute the documental foundation of this book. After failing in the TL Jagdflugzeug contests in March 1943, Volksflugzeug in September 1944 and Hochleistungs Nachtjäger in January 1945, Focke Wulf could finally overcome its competitors with the great Jägernotprogramm design Ta 183. Although it was too late to intervene in the Second World War, it served as inspiration for numerous designs of other countries during the first years of the Cold War.

**Allied Armored Fighting Vehicles 1:72 Scale** George Bradford, 2009 Filled with 1:72-scale drawings of armored vehicles from the U.S., Britain, Canada, and Russia, including: M4 Sherman medium tank (U.S.) T1E3 Aunt Jemima mine exploder (U.S.) M18 Hellcat tank destroyer (U.S.) Mk VI Crusader cruiser tank (Britain) Crocodile flamethrower (Britain) Ram I cruiser tank (Canada) T-34 medium tank (Russia) SU-100 tank destroyer (Russia) And dozens more . . .

*European-Russian Space Cooperation* Brian Harvey, 2021-04-10 The story of European-Russian collaboration in space is little known and its importance

all too often understated. Because France was the principal interlocutor between these nations, such cooperation did not receive the attention it deserved in English-language literature. This book rectifies that history, showing how Russia and Europe forged a successful partnership that has continued to the present day. Space writer Brian Harvey provides an in-depth picture of how this European-Russian relationship evolved and what factors—scientific, political and industrial—propelled it over the decades. The history begins in the cold war period with the first collaborative ventures between the Soviet Union and European countries, primarily France, followed later by Germany and other European countries. Next, the chapters turn to the missions when European astronauts flew to Russian space stations, the Soyuz rocket made a new home in European territory in the South American jungle and science missions were flown to study deep space. Their climax is the joint mission to explore Mars, called ExoMars, which has already sent a mission to Mars. Through this close examination of these European-Russian efforts, readers will appreciate an altogether new perspective on the history of space exploration, no longer defined by competition, but rather by collaboration and cooperation.

*La-5/7 vs Fw 190* Dmitriy Khazanov, Aleksander Medved, 2011-09-20 Soviet fighter aviation suffered terribly at the hands of the Jagdwaffe in the first year of the war in the east and, with the arrival of JG 51 and its Fw 190s on the Stalingrad Front in September 1942, things only got worse. However, help

was on its way in the form of the La-5. Tougher, faster, and with a greater rate of climb than its predecessors, most were flown by a new generation of better-trained pilots led by combat veterans. These new fighters soon found themselves pitted into action on the Central Sector against the equally new Fw 190As of JG 51. From then on, these two fighters would battle it out in the skies over the Eastern Front. This book tells the complete story of the battles between these two important fighters.

**Soviet Bombers of the Second World War** Jason Nicholas Moore, 2019-09-08

Soviet bombers were a varied lot during the Second World War, ranging from single-engined biplanes such as the 1920's era Polikarpov U-2 to the excellent and modern twin-engined Tu-2 medium bomber. Although the use of four-engined strategic bombers was mostly limited to use of the huge Pe-8 bomber, the Soviets used many other aircraft for both strategic and tactical bombing. As the bombers of the Red Air Force were mainly tasked with supporting the Red Army, most of the bombers were used for tactical bombing, attacking tanks, troop convoys, trains, and airfields. This book will deal with both strategic bombers and tactical bombers, but will concentrate on the smaller tactical bombers, as this is where the Red Air Force's emphasis lay. Such types as the Il-4, the Su-2, the aforementioned Tu-2, and the most important bomber of all, the Il-2 Shturmovik attack bomber, will be described in great detail, including not only details on the aircraft themselves, but how they were deployed in combat. The one truly strategic bomber, the Pe-8,

will not be forgotten, and neither will the comparatively tiny U-2 biplane, which was so effective in its use as a night-time nuisance raider that the Germans copied the tactic wholesale. Accurate colour profiles in some number will accompany the text in this comprehensive work on Soviet bombers.
