Rebuilding the Royal Navy D. K. Brown, George

Moore, 2012-07-30 This design history of post-war British warship development, based on both declassified documentation and personal experience, is the fourth and final volume in the author's masterly account of development of Royal Navy's ships from the 1850s to the Falklands War. In this volume the author covers the period in which he himself worked as a Naval Constructor, while this personal knowledge is augmented by George Moore's in-depth archival research on recently declassified material. The RN fleet in 1945 was old and worn out, while new threats and technologies, and post-war austerity called for new solutions. How designers responded to these unprecedented challenges is the central theme of this book. It covers the ambitious plans for the conversion or replacement of the bigger ships; looks at all the new construction, from aircraft carriers, through destroyers and frigates, to submarines (including nuclear and strategic), to minesweepers and small craft. The authors pay particular attention to the innovations introduced, and analyses the impact of the Falklands War. At the start of the twenty-first century the Royal Navy is still a powerful and potent force with new and a number of innovative classes, both surface and sub-surface, coming on stream. This book offers a fascinating insight into how the post-war fleet developed and adapted to the changing role of the Navy.

A Submariner's War Michael Wilson, 2000 The Indian Ocean submarine war engaged men and submarines of every major combatant nation. Submarines of seven nations fought a war of attrition from 1939-45. This book details the war.

Vulcan 607 Rowland White, 2012 It was to be one of the most ambitious operations since 617 Squadron bounced their revolutionary bombs into the dams of the Ruhr Valley in 1943... Chinese Naval Strategy in the 21st Century James R. Holmes, Toshi Yoshihara, 2012-09-10 Alfred Thayer Mahan has been called America's nineteenth-century 'evangelist of sea power' and the intellectual father of the modern US Navy. His theories have a timeless appeal, and Chinese analysts now routinely invoke Mahan's writings, exhorting their nation to build a powerful navy. Economics is the prime motivation for maritime reorientation, and securing the sea lanes that convey foreign energy supplies and other commodities now ranks near or at the top of China's list of military priorities. This book is the first systematic effort to test the interplay between Western military thought and Chinese strategic traditions vis-à-vis the nautical arena. It uncovers some universal axioms about how theories of sea power influence the behaviour of great powers and examines how Mahanian thought could shape China's encounters on the high seas. Empirical analysis adds a new dimension to the current debate over China's 'rise' and its importance for international relations. The findings also clarify the possible implications of China's maritime rise for the United States, and illuminate how the two powers can manage their bilateral interactions on the high seas. *Chinese Naval Strategy in the 21st Century* will be of much interest to students of naval history, Chinese politics and security studies.

Dire Strait? David A. Shlapak, David T. Orletsky, Barry Wilson, 2000 Among the hottest flashpoints in the world today, the Taiwan Strait cannot be ignored by U.S. policymakers and diplomats. China regularly rattles its saber to intimidate Taiwan and influence U.S. policy but has thus far stopped short of overt military action. This report analyzes the steps Taiwan should take to bolster the odds in its favor should a conflict with the mainland occur and describes how the United States can most effectively contribute in both peace and crisis. The authors conclude that the

United States and Taiwan can take a number of fairly simple and relatively inexpensive measures - including hardening air bases and other facilities and upgrading the air defense command and control system - that would significantly enhance Taiwan's ability to defend itself against a large-scale Chinese attack.

China Goes to Sea Andrew S. Erickson, Lyle J

Goldstein, Carnes Lord, 2009-07-01 In modern history, China has been primarily a land power, dominating smaller states along its massive continental flanks. But China's turn toward the sea is now very much a reality, as evident in its stunning rise in global shipbuilding markets, its vast and expanding merchant marine, the wide offshore reach of its energy and minerals exploration companies, its growing fishing fleet, and indeed its increasingly modern navy. Yet, for all these achievements, there is still profound skepticism regarding China's potential as a genuine maritime power. Beijing must still import the most vital subcomponents for its shipyards, maritime governance remains severely bureaucratically challenged, and the navy evinces, at least as of yet, little enthusiasm for significant blue water power projection capabilities. This volume provides a truly comprehensive assessment of prospects for China's maritime development by situating these important geostrategic phenomena within a larger world historical context. China is hardly the only land power in history to attempt transformation by fostering sea power. Many continental powers have elected or been impelled to transform themselves into significant maritime powers in order to safeguard their strategic position or advance their interests. We examine cases of attempted transformation from the Persian Empire to the Soviet Union, and determine the reasons for their success or failure. Too many works on China view the nation in isolation. Of course, China's history and culture are to some extent exceptional, but building intellectual fences actually hinders the effort to understand China's current development trajectory. Without underestimating the enduring pull of China's

past as it relates to threats to the country's internal stability and its landward borders, this comparative study provides reason to believe that China has turned the corner on a genuine maritime transformation. If that proves indeed to be the case, it would be a remarkable if not singular event in the history of the last two millennia.

The People's Liberation Army in the Information Age

James C. Mulvenon, Richard H. Yang, 1999 The product of a 1998 RAND conference, this collection discusses the People's Liberation Army. It covers the non-hardware side of the PLA's modernization and examines the critical software side, including civil-military relations, professionalism, logistics, training, doctrine, and more.

Right Sizing the People's Liberation Army: Exploring the Contours of China's Military Roy Kamphausen, Andrew Scobell, 2007 China is the emerging power having the greatest potential to compete militarily with the United States and field disruptive military technologies that could over time offset traditional U.S. military advantages absent U.S. counter strategies, according to the 2006 Quadrennial Defense Review from the U.S. Department of Defense. With military spending and modernization that have persisted with little or no abatement or recantation for well over a decade, China has the entire international community wondering to what ends such growth will be put.

Modernizing China's Military David Shambaugh, 2003-03-25 David Shambaugh, a leading international authority on Chinese strategic and military affairs, offers the most comprehensive and insightful assessment to date of the Chinese military. The result of a decade's research, *Modernizing China's Military* comes at a crucial moment in history, one when international attention is increasingly focused on the rise of Chinese military power. Basing his analysis on an unprecedented use of Chinese military publications and interviews with People's Liberation Army (PLA) officers, Shambaugh addresses important questions about Chinese strategic intentions and military capabilities--questions that are of

key concern for government policymakers as well as strategic analysts and a concerned public.

2006 Report to Congress of the U.S.-China Economic and Security Review Commission United States. U.S.-China Security Review Commission, 2006

Asia & the Pacific Paul Daniel Taylor, 2001 Carl von Clausewitz taught that anyone who plans strategy before he has achieved a clear definition of policy goals puts the cart before the horse. It is equally true that it makes no sense for a country to try to develop its forces or plan operations without taking account of the unique characteristics that define and shape its potential adversaries and available allies. For these reasons, we at the Naval War College have placed special emphasis on understanding the Asia-Pacific region. The economic, political, and demographic dynamics of that area make clear its importance to achieving global U.S. objectives. At the same time, continued tensions related to the Korean Peninsula, issues between China and Taiwan and between India and Pakistan, as well as unrest within Indonesia underscore important threats to stability in the region. Its vast territory and expanses of ocean make the Asia-Pacific region fundamental a maritime theater and the U.S. Navy a central player in any military operations that defend the interests of the United States. The Asia-Pacific Forum, from which the papers that follow are taken, brought together a distinguished collection of scholars and policy practitioners to examine the political, economic, and military realities of the Asia-Pacific region in the context of the U.S. strategic tradition. They proved that familiar military thinking about some important questions might have become obsolete.

Chinese Military Modernization and Force Development

Anthony H. Cordesman, Ashley Hess, Nicholas S. Yarosh, 2013-10-22 This report from the CSIS Burke Chair in Strategy examines trends in Chinese strategy, military spending, and military forces based on Chinese defense white papers and other official Chinese sources; US reporting by the Department of Defense and other

defense agencies; and other government sources, including Japanese and Korean defense white papers and the International Monetary Fund.

China's Grand Strategy Andrew Scobell, Edmund J. Burke, Cortez A. Cooper III, Sale Lilly, Chad J. R. Ohlandt, Eric Warner, J.D. Williams, 2020-07-27 To explore what extended competition between the United States and China might entail out to 2050, the authors of this report identified and characterized China's grand strategy, analyzed its component national strategies (diplomacy, economics, science and technology, and military affairs), and assessed how successful China might be at implementing these over the next three decades.

Chinese Views of Future Warfare Michael Pillsbury, 1997-12 An introduction to the works of authoritative and innovative Chinese authors whose writings focus on the future of the Chinese military. These carefully selected, representative essays make Chinese military thinking more accessible to western readers. It reveals, for example, China's keen interest in the Revolution in military affairs. This volume is an important starting point for understanding China's future military modernization. Must reading for every executive of every Western firm doing business in China. Readers will be impressed by China's ambitions in space, information warfare, stealth, and robots, in future warfare.
