Su-57 Felon Piotr Butowski,2022-08-31 In December 2020, the first Sukhoi Su-57, codenamed Felon by NATO, entered service with the Aerospace Forces, making it Russia's most recent combat aircraft. It is a multirole aircraft combining the functions of both a fighter and strike aircraft, with design features that include stealth, supersonic cruising speed and maneuverability, the latest sensors and weaponry, and network-centric warfare capability. Fully illustrated with over 170 full-color photographs, this book describes the trials of the T-50 prototypes and the implementation of the Su-57 into series production, as well as looking at the design, characteristics and combat capabilities of this fifth-generation fighter.

Sukhoi Su-15 Yefim Gordon,Dmitriy Komissarov,2015-04-30 A history of this supersonic Soviet interceptor, including useful information for model makers. In the late 1950s, the Sukhoi Design Bureau, already an established fighter maker, started work on a successor to its Su-9 and Su-11 single-engined interceptors for the national Air Defense Force. Similar to its predecessors, the new aircraft, designated Su-15, had delta wings; unlike the Su-9/Su-11, however, it had twin engines and lateral air intakes freeing up the nose for a powerful fire control radar. First flown in May 1962, the Su-15 officially entered service in 1965 and was built in several versions, the late ones having cranked-delta wings and a more capable radar. Being an air defense fighter, the Su-15 frequently had to deal with intruders. Unfortunately the aircraft gained notoriety in two separate incidents involving shoot-downs of Boeing airliners (a 707 in 1978 and a 747 in 1983), both of which were South Korean and had intruded into Soviet airspace on what were very probably clandestine spy missions. This book describes the developmental and service history of the Sukhoi Su-15, and contains a comprehensive survey of all model-making kits currently available on the market.

Sukhoi Su-27sm(3)/SKM Hugh Harkins,2016-06-17 Sukhoi Su-27SM(3)/SKM - The purpose of this volume is to detail the Sukhoi Su-27SM(3)/SKM family of 4th+ generation multirole combat aircraft which emanated from an upgrade program for serial production Su-27S 4th generation air superiority fighter aircraft and a new build program for Su-27SKM and Su-27SM3 aircraft for the export and domestic markets respectively. The volume covers the evolution of the first generation Su-27 air superiority fighter, which was born out of the T-10 development program of the 1970's, leading to the 21st century Su-27SM(3)/SKM multirole combat aircraft through the anomaly that was the Su-30KI development of the late 1990's. No attempt is made to detail the plethora of developments that evolved from the Su-27 such as the two-seat Su-30 families, attention being fixed on the further development of the single-seat Su-27S into the Su-27SM(3)/SKM variants. All technical information regarding the aircraft, systems and weapons have been provided by the respective developers/manufacturers, as have many of the photographs and graphics. Certain elements of text, when pertinent, are taken from the volumes 'Sukhoi Su-35S 'Flanker' E, Russia's 4++ Generation Super-Manoeuvrability Fighter' and 'Sukhoi Su-30MKK/MK2/M2 - Russo Kitashiy Striker from Amur'.

Sukhoi Su-30 Super-Manoeuvrable Family Hugh Harkins,2016-03-15 The Su-30MKI family of super-maneuvrable multi-role combat aircraft share the same numerical designation as the Su-30MKK/MK2 family of combat aircraft although both design groups, despite being directly descendant from the first generation Su-27, took different evolutionary paths. Numerical designation and some first glance looks aside, the Su-30MKI family are fundamentally different designs from the Su-30MKK/MK2 family in terms of primary design role, internal systems and structure; certainly in regards to the latter the Su-30MKK/MK2 having more in common with the Su-27M (first generation Su-35) than the Su-30M from which the Su-30MKI is clearly derived; this design clearly having evolved from the Su-30M which was developed from the Su-27UB two-seat operational conversion trainer variant of the Su-27S single-seat air superiority fighter. This volume covers the evolution of the Su-30 design from the Su-27, which was born out of the T-10 development program of the 1970's. The evolution of the Su-30M interceptor into the multi-role Su-30MK and ergo the Su-30MKI 'super-maneuvrable' series is detailed. The various design models, the Su-30MKI for India, Su-30MKM for Malaysia, Su-30MKI(A) for Algeria and the domesticated Su-30SM (Russian CM) for Russia and Kazakhstan are described in detail, as are the weapons that can be employed by the respective variants. All technical information regarding the aircraft, systems and weapons have been provided by the respective manufacturers, as have many of the photographs and graphics. Certain elements of text, when pertinent, are taken from the volumes 'Sukhoi Su-35S 'Flanker' E, Russia's 4++ Generation Super-Manoeuvrability Fighter' and 'Sukhoi T-50/PAK FA, Russia's 5th Generation 'Stealth' Fighter'.

Russia's Air-launched Weapons Piotr Butowski,2017 Harpia Publishing presents an authoritative English-language account of the Russian-made airborne weapons currently in service on board fixed-wing aircraft and helicopters around the world. Readers of Russia's Warplanes will be familiar with the in-depth research, lavish illustrations and comprehensive specifications of this important but often over

On Subscale Flight Testing Alejandro Sobron,2018-11-05 Downscaled physical models, also referred to as subscale models, have played an essential role in the investigation of the complex physics of flight until the recent disruption of numerical simulation. Despite the fact that improvements in computational methods are slowly pushing experimental techniques towards a secondary role as verification or calibration tools, real-world testing of physical prototypes still provides an unmatched confidence. Physical models are very effective at revealing issues that are sometimes not correctly identified in the virtual domain, and hence can be a valuable complement to other design tools. But traditional wind-tunnel testing cannot always meet all of the requirements of modern aeronautical research and development. It is nowadays too expensive to use these scarce facilities to explore different design iterations during the initial stages of aircraft development, or to experiment with new and immature technologies. Testing of free-flight subscale models, referred to as Subscale Flight Testing (SFT), could offer an affordable and low-risk alternative for complementing conventional techniques with both qualitative and quantitative information. The miniaturisation of mechatronic systems, the advances in rapid-prototyping techniques and power storage, as well as new manufacturing methods, currently enable the development of sophisticated test objects at scales that were impractical some decades ago. Moreover, the recent boom in the commercial drone industry has driven a quick development of specialised electronics and sensors, which offer nowadays surprising capabilities at competitive prices. These recent technological disruptions have significantly altered the cost-benefit function of SFT and it is necessary to re-evaluate its potential in the contemporary aircraft development context. This thesis aims to increase the comprehension and knowledge of the SFT method in order to define a practical framework for its use in aircraft design; focusing on low-cost, short-time solutions that don't require more than a small organization and few resources. This objective is approached from a theoretical point of view by means of an analysis of the physical and practical limitations of the scaling laws; and from an empirical point of view by means of field experiments aimed at identifying practical needs for equipment, methods, and tools. A low-cost data acquisition system is developed and tested; a novel method for semi-automated flight testing in small airspaces is proposed; a set of tools for analysis and visualisation of flight data is presented; and it is also demonstrated that it is possible to explore and demonstrate new technology using SFT with a very limited amount of economic and human resources. All these, together with a theoretical review and contextualisation, contribute to increasing the comprehension and knowledge of the SFT method in general, and its potential applications in aircraft conceptual design in particular.

National Guard's State Partnership Program Dave Pruitt,Peter Lozano,2012 The State Partnership Program (SPP) is a Department of Defense security cooperation program run by the National Guard. It also serves as a mechanism for training National Guard personnel. Since the program began in 1992, it has expanded to the point where nearly every state National Guard participates, including Guam, Puerto Rico, the U.S. Virgin Islands, and the District of Columbia. The SPP relates to several areas of potential interest to Congress,

including improving the capabilities of partner nations to protect their citizens; strengthening relationships with partners to facilitate cooperation, access, and interoperability; improving cultural awareness and skills among U.S. military personnel; and fostering the integration of reserve and active component forces into a total force. This book provides an overview of the origin and development of the program; summarizes its unique aspects; and outlines its statutory basis, funding mechanisms, organization, and activities; with a focus on recent legislative and executive branch actions.

Know the Anti-Nationals RSN Singh,2021-02-04 We live in an era of nation-states. Nationhood is predicated on shared sense of past and a common purpose of future. More than nation-state, India is a civilization, a complete civilization. To keep this civilization fresh and vibrant, winds from all directions are imperative for its nourishment. But, winds cannot be allowed to build into destructive storms, that threaten to uproot the civilization, the very basis of nationhood. Jihadism and Maoism are the two main destructive storms. Fueling these storms are India's enemies as well as the forces of proselytization. They have to be crushed both at ideological and physical levels. We have been squeamish in dealing with the problems because of the misplaced notion that all ideologies are basically benign and beneficial, they are not. 73 years of our post-independence experience is testimony. This misplaced notion has caused at least a lakh lives in Kashmir alone, resulting in ethnic cleansing of Hindus from the Valley by the jihadists. Sardar Patel did crush the communist revolt in Telangana, but in the following years due to subversion of our political class, it grew into the 'Red Corridor', i.e. from Tirupati to Pashupati. These forces have to be vanquished to secure the internal or the third front. This book 'Know the Anti-Nationals' exposes these enemies within.

Vulcan 607 Rowland White,2012 It was to be one of the most ambitious operations since 617 Squadron bounced their revolutionary bombs into the dams of the Ruhr Valley in 1943... When Argentine forces invaded the Falklands in the early hours of 2 April 1982, Britain's military chiefs were faced with a real-life Mission Impossible.

My Years with the IAF Pratap Chandra Lal,1986 This is the first time that an Air Chief is sharing his thoughts and memories with the reading public. His span of service covers a period of thirty-three years: from the end of 1939 to the beginning of 1973. It includes the Burma campaign of World War II, the restricted fighting in Kashmir in 1947 and 1948, the Chinese debacle in 1962 and the two full scale wars with Pakistan in 1965 and 1971. He had 4,274 hrs of flying with the Air Force to his credit and the experience of flying 58 types of aircraft from Wapitis to supersonic jets. In 1965 he was the Vice Chief of Air Staff and in 1971 the Chief. His honesty and forthrightness many readers will find engaging& but perhaps a few who were on the scene then may find them unpalatable. In a way this is the story of aviation in India, in particular of the Indian Air Force. It is a story of a real life adventure the genesis, growth and achievements of the youngest of the three defence services. Sir Winstom Churchill said of the RAF: Never before in the history of human conflict was so much owed by so many to so few. That is true also of the Indian Air Force. Though this does not purport to be a history of the Indian Air Force without it no history would be complete.

War is Boring David Axe,Matt Bors,2010-08-03 Read David Axe's blogs and other content on the Penguin Community. The war memoir as graphic novel-an utterly unforgettable and highly original look at war in the 21st century. Street battles with spears and arrows in sweltering East Timor. Bone-jarring artillery duels in Afghanistan's mountains. Long patrols on the sandy wastes of southern Iraq. For four years, war was life for David Axe. He was alternately bored out of his mind and completely terrified. It was strangely addictive. As a correspondent for The Washington Times, C-SPAN and BBC Radio, Axe flew from conflict to conflict, reveling in death, danger, and destruction abroad while, back in D.C., his apartment gathered dust, his plants died, and his relationships withered. War reporting was physically, emotionally, and financially draining-and disillusioning. Loosely based on the web comic of the same name, with extensive new material, War Is Boring takes us to Lebanon and Somalia; to arms bazaars across the United States; to Detroit, as David tries to reconnect with his family-and to Chad, as David attempts to bring attention to the Darfur genocide. 100 Years of Radar Gaspare Galati,2015-09-15 This book offers fascinating insights into the key technical and scientific developments in the history of radar, from the first patent, taken out by Hülsmeyer in 1904, through to the present day. Landmark events are highlighted and fascinating insights provided into the exceptional people who made possible the progress in the field, including the scientists and technologists who worked independently and under strict secrecy in various countries across the world in the 1930s and the big businessmen who played an important role after World War II. The book encourages multiple levels of reading. The author is a leading radar researcher who is ideally placed to offer a technical/scientific perspective as well as a historical one. He has taken care to structure and write the book in such a way as to appeal to both non-specialists and experts. The book is not sponsored by any company or body, either formally or informally, and is therefore entirely unbiased. The text is enriched by approximately three hundred images, most of which are original and have been accessed by detailed searches in the archives.

The Russian Military in Contemporary Perspective United States Army War College,2023-11-11 Wherever one looks, Russia is carrying out aggressive military and informational attacks against the West in Europe, North and South America, the Arctic, and the Middle East. This war against the West actually began over a decade ago, but its most jarring and shocking event, the one that started to focus Western minds on Russia, was the invasion of Ukraine in 2014. Given this pattern, the National Security Council (NSC) in 2014 invited Stephen Blank to organize a conference on the Russian military. We were able to launch the conference in 2016 and bring together a distinguished international group of experts on the Russian military to produce the papers that were then subsequently updated for presentation here. The results presented here are sobering, to say the least. Ray Finch and Aleksandr Golts highlight the domestic program of military mobilization of Russian society that began before 2014 and has only intensified since then. It aims to engender a positive, heroic image for the military and the idea that Russia is under siege from the West. This campaign has also gone hand in hand with signs of greatly enhanced defense spending, although there have been cuts in 2017-2018 due to sanctions. However, despite the fact that Paul Schwartz rightly points out that Russia's science and technology sectors are wounded and suffer from excessive militarization, he and Steven Rosefielde undermine the complacent and excessively comfortable notion that Russian economic weakness which is real-will lead to the collapse of the system or its retreat from its current posture.
