*Project Natter* Brett Gooden,2005-12-31 In 1944, in response to the bombing of German cities and factories by the Allies, an inventor named Erich Bachem developed 'Projekt Natter' ('Viper'), an extraordinary, highly-secret, vertical take-off, semi-expendable, single-seat rocket-fighter armed with a nose-mounted 'honeycomb' of 73-mm or 55-mm spin-stabilized air-to-air rockets as well as 30-mm cannon. The Natter was intended to offer high-speed defense of key targets. Once blasted into the air from its vertical launch tower, the pilot of the Natter was to climb towards an enemy formation using an internal rocket, target an enemy bomber and fire his battery of rockets. He would then use the remaining kinetic energy to climb higher than the bombers in order to mount a ramming attack. Just before impact, the pilot was to trigger a mechanism that would activate an ejection seat and separate the rocket unit, which would return to earth by means of an automatically deployed parachute for reuse. Relatively little has been published on the Natter and this book will provide a detailed and definitive account of this unusual but fascinating aircraft. This will be required reading for all those interested in the history of the Luftwaffe during World War II, particularly for those fascinated by the radical and revolutionary projects which German aircraft designers contrived toward the end of the Nazi regime.

Allied Armored Fighting Vehicles 1:72 Scale George Bradford,2009 Filled with 1:72-scale drawings of armored vehicles from the U.S., Britain, Canada, and Russia, including: M4 Sherman medium tank (U.S.) T1E3 Aunt Jemima mine exploder (U.S.) M18 Hellcat tank destroyer (U.S.) Mk VI Crusader cruiser tank (Britain) Crocodile flamethrower (Britain) Ram I cruiser tank (Canada) T-34 medium tank (Russia) SU-100 tank destroyer (Russia) And dozens more . . .

Patton's First Victory Leo Barron,2017-10-20 American troops invaded North Africa in November 1942, but did not face serious resistance until the following February, when they finally tangled with Rommel's Afrika Korps—and the Germans gave the inexperienced Americans a nasty drubbing at Kasserine Pass. After this disaster, Gen. George Patton took command and reinvigorated U.S. troops with tough training and new tactics. In late March, at El Guettar in Tunisia, Patton's men defeated the Germans. It was a morale-boosting victory—the first American success versus the Germans and the first of Patton's storied World War II career—and proved to the enemy, the British, and the Americans themselves that the U.S. Army could fight and win.

**Japanese Aero-Engines 1910-1945** Mike Goodwin, 2017 In this book the authors have endeavored to remedy the notable lack of comprehensive coverage. The development of all the many engines produced by Japanese aero-engine manufacturing companies from 1912 to 1945 is explored in detail, including a full explanation of the different systems used to identify them. Furthermore, the developments are related to the aircraft in which the various engines were used, including prototypes, flying test-beds, and changes in the make or type of engine during an aircraft's operational service. In other words aircraft evolution in Japan is viewed in snapshots as it happened from the aero-engine aspect and not from the complete aircraft aspect as is featured in most publications. Unfortunately this approach necessitates numerous cross-references in the text where several different engines are associated with a particular aircraft, for which the authors can only apologize. Lastly, to illustrate the industrial background, the origin and development of each of the aero-engine manufacturing companies is also outlined briefly

**Fighter Combat** Robert L. Shaw, 1985 This book provides a detailed discussion of one-on-one dog-fights and multi-fighter team work tactics. Full discussions of fighter aircraft and weapons systems performance are provided along with an explanation of radar intercept tactics and an analysis of the elements involved in the performance of fighter missions.

**The Spirit of Attack** Bruce Gordon, 2014-01-28 SCRAMBLE! In a couple of minutes my wingman and I would be airborne on another adventure. Sometimes we intercepted an airliner, sometimes a misplaced B-52 bomber, and sometimes Russian bombers probing our defenses; Russian warships; MIG fighters; or troops in contact in Vietnam, calling for napalm only yards from their positions. Twice it was UFOs - Unidentified Flying Objects! This book is a series of short stories, supported by more than 90 photographs. The first part has my own stories; later stories were contributed by my fellow pilots. The last story is from WW II of our P-38 fighters attacking the Romanian oil fields and getting badly mauled by defending Romanian fighters - and a Romanian pilot's view of the battle! Only the spirit of attack borne in a brave heart will bring success to any fighter aircraft, no matter how highly developed the aircraft may be. That quote from Adolf Galland, an Ace of the German Luftwaffe in WW II, was the motto of our 317th Fighter Interceptor Squadron in Alaska. The fighter pilot is a hunter, and

his quarry is the most dangerous in the world - men who want to kill him! The best defense is a good offense - ATTACK! The US Air Force had a program called Every Man a Tiger. A tiger does not kill impulsively or in anger, but plans his attack carefully and strikes with cool ferocity. We were tigers! Fighter pilots tell stories around the bar, but they seldom write them down. These stories were written by the fighter pilots themselves! Come with me and hear of the beauty of flight, the mortal danger of electrical power failure at night in a snowstorm, and the thrill of attack with 20mm cannons firing right under your feet!

**The First Jet Pilot** Lutz Warsitz, Geoffrey Brooks, 2009-04-21 The pilot's son delivers "a fascinating read and an invaluable insight in to the workings of pre- and wartime test flying under the Third Reich" (Military Aircraft Monthly). On 27 August 1939, Flugkapitan Erich Warsitz became the first man to fly a jet aircraft, the Heinkel He 178, and in June of the same year he flew the first liquid-fuel rocket aircraft, the Heinkel He 176. His legendary flying skills enabled him to assist the pioneering German aircraft and engine design teams that included Wernher von Braun and Ernst Heinkel. He repeatedly risked his life extending the frontiers of aviation in speed, altitude and technology and survived many life-threatening incidents. This book is written by Erich's son who has used his father's copious notes and log books that explain vividly the then halcyon days of German aviation history. Warsitz was feted by the Reich's senior military figures such as Milch, Udet and Lucht and even Hitler keenly followed his experimental flying. Little is known of this pioneer period because of the strict secrecy which shrouded the whole project—it is a fascinating story that tells of the birth of the jet age and flight as we know it today. The book includes many unseen photographs and diagrams. "This book is nothing short of a gem for anyone interested in real aviation history . . . through Lutz Warsitz's words, readers share the emotions— apprehension, loyalty, fear, frustration and elation—of being part of some of aviation's most significant advances." —Pacific Wing Magazine "More than just a good read. An historical document of inestimable value in the aviation pioneering field." —Airnews

Japanese Secret Projects Edwin M. Dyer, 2009 Surprisingly, secret Japanese planes of World War II remain an area that has been largely ignored due to scarcity of information. They do, however, have a large base of interest as unlike the majority of secret Luftwaffe programs that were resigned to the drawing board, the vast number of aircraft featured within this book actually flew or were in development. The book begins with an overview of the IJN and IJA through the early years to 1945, and their secret technical exchanges with the Luftwaffe throughout the war. It is divided into two sections dedicated to the two armed forces, with a total of 34 aircraft examined, each with its history,

performance, and combat records laid out in an easy to read fashion. The book provides photographs, technical drawings, and stunning color renditions of the aircraft in combat. Notable emphasis is placed upon the supersonic kamikaze aircraft, the Amerika bomber, and the ways in which the Japanese improved on German technology, particularly the Me 262 and Komet. Secret Japanese armaments are also covered in detail, with information uncovered on guided missiles, rockets, and cannons. A gripping read for aviation and military enthusiasts around the world!

*Mikoyan-Gurevich MiG-21* Alexander Mladenov, 2014-06-20 The MiG-21 (NATO reporting name Fishbed) firmly holds the title of the world's most widely built and used jet fighter, with more than 10,000 units rolling off the lines of three plants in the former Soviet Union. The type was also built under license in India and Czechoslovakia, and without license in China until the late 2000s. Designed as a Mach-2 light tactical fighter, its original prototype, the Ye-6/1, was first flown in 1958. The first production variant of the type, designated the MiG-21F, appeared in 1960 and its improved sub-variant, the MiG-21F-13 (Type 74, NATO reporting name Fishbed-C), was made available for export by 1961. It was a simplified daytime short-range, clear-weather interceptor and tactical fighter.

*Moon Shot* Alan Shepard, Deke Slayton, Jay Barbree, 2011-05-03 New York Times bestseller for fans of *First Man*: A “breathtaking” insider history of NASA’s space program—from astronauts Alan Shepard and Deke Slayton (Entertainment Weekly). On October 4, 1957, the Soviet Union launched Sputnik I, and the space race was born. Desperate to beat the Russians into space, NASA put together a crew of the nation’s most daring test pilots: the seven men who were to lead America to the moon. The first into space was Alan Shepard; the last was Deke Slayton, whose irregular heartbeat kept him grounded until 1975. They spent the 1960s at the forefront of NASA’s effort to conquer space, and *Moon Shot* is their inside account of what many call the twentieth century’s greatest feat—landing humans on another world. Collaborating with NBC’s veteran space reporter Jay Barbree, Shepard and Slayton narrate in gripping detail the story of America’s space exploration from the time of Shepard’s first flight until he and eleven others had walked on the moon.

*The Vought F4U Corsair* Martin W. Bowman, 2019-12-27 This fully illustrated history of the iconic

American fighter plane examines its development and combat experience through WWII and beyond. First flown in 1940, the Vought F4U Corsair was the fastest fighter in the world and the fastest US aircraft of any description. Powered by a huge 18-cylinder Pratt and Whitney Double Wasp engine, the first Corsairs were capable of speeds up to 417 miles per hour. This figure would rise to nearly 450mph in later versions. The F4U entered service with the US Navy in September 1942 and over time was extensively used by the US Marines, Royal Navy and Royal New Zealand Air Force. Famous squadrons that flew these planes—like VMF-214 'The Black Sheep' and VF-17 'Jolly Rogers'—maintained their superiority over the Japanese for the rest of the war. After the Second World War the Corsair was used with distinction by the French in Indo-China and again by the US Navy in Korea. Since then, Corsairs have remained a favorite among warbird enthusiasts the world over. This comprehensive book examines the engineering of the Corsairs alongside a detailed history of their development and usage in combat. Illustrated with scores of rare and previously unpublished photographs, Vought F4U Corsair is the perfect book for any fan of the 'bent wing bird'.

**To Win the Winter Sky** Danny S. Parker, 1998-06-21 As Allied and German armies fought on the ground in the Battle of the Bulge, an equally desperate battle raged in the skies overhead, as enemy air forces fought the weather and each other for supremacy. Acclaimed author Danny Parker completes the narrative begun in his highly successful *Battle of the Bulge*. He covers the important and previously unexplored air aspect of a famous land battle. Those who thought they were thoroughly familiar with Hitler's last offensive will find a wealth of new information here, including exclusive interviews with war-time airmen, over 100 rare photos, the unknown story of German MIAs, Luftwaffe jets and other secret weapons, losses in men and aircraft for both sides from government archives, aircraft performance comparisons, and the innovations in tactics and technology that made victory for one side possible and defeat for the other side inevitable. Through all the facts and figures, Danny Parker weaves a compelling narrative about the airmen on both sides in the last desperate days of World War II, about their conflicts with the enemy and among themselves as they stood on the brink of victory--and defeat. As the end of the war drew near, Allied leaders were divided between British and Americans, air and ground commanders, and advocates of strategic and tactical air operations. On the German side, Luftwaffe leaders Hermann Göring and Dietrich Peltz sought to obey every order to the bitter end, while Luftwaffe fighter commander Adolf Galland struggled to save his last reserves of young pilots

from a final and futile slaughter.Danny S. Parker is a former research consultant to the Joint Chiefs of Staff on the Battle of the Bulge, and is the author of Ten Percent Chance of Victory: The Last Operation of the German Airborne, and The Battle of the Bulge. He is highly regarded by veterans, historians, and active-duty military personnel.
