French Bombers of WWII Jose Fernandez,Patrick Loureaut,2015-06-29 Whilst French fighter aircraft of the early war period are well known and the subject of many books, the bomber aircraft used by the French Air Force in this period are not well documented in English. This book describes and illustrates all such aircraft in use in WWII, from the obsolescent to the elegant and up-to-date modern bombers.Fully illustrated with many wartime photos, and scale plans of the major types. Full color profiles of many representative aircraft.

Fiat CR.42 Aces of World War 2 Håkan Gustavsson,Ludovico Slongo,2009-11-24 The Fiat CR.42, a logical development of the Fiat CR.32, was the last single-seat fighter biplane to be produced. It entered service with the Italian Regia Aeronautica in May 1939 before being exported to Belgium, Hungary and Sweden. Its combat debut came when the Belgian air force threw its fleet into action during the German invasion of the Low Countries on 10th May 1940. Despite being quickly overwhelmed, the Belgian pilots managed to make a number of aerial claims. The CR.42 became heavily involved in the fighting in North Africa and although it was gradually replaced by more modern fighters, it continued in a point defense and ground support role until the end of the war. Drawing on research from a range of sources, this book examines the extensive employment of the Italian fighter plane during the course of World War II.

Distributed Propulsion Technology Amir S. Gohardani,2014 Distributed propulsion technology is one of the revolutionary candidates for future aircraft propulsion. In this book, which serves as the very first reference book on distributed propulsion technology, the potential role of distributed propulsion technology in future aviation is investigated. Following a historical journey that revisits distributed propulsion technology in unmanned air vehicles, commercial aircrafts, and military aircrafts, features of this specific technology are highlighted in synergy with an electric aircraft concept and a first-of-its-kind comparison between commercial and military aircrafts employing distributed propulsion arrangements. In light of propulsionairframe integration and complementary technologies, such as boundary layer ingestion, thrust vectoring and circulation control, transpired opportunities and challenges are addressed in addition to a number of identified research directions proposed for future aircrafts. Moreover, a diverse set of distributed propulsion arrangements are considered. These include: small engines, gas-driven multi-fan architectures, turboelectric systems featuring superconductive and non-superconducting electrical machine technology, and electromagnetic fans. This book features contributions by the National Aeronautics and Space Administration (NASA) and the United States Air Force (USAF), and includes the first proposed official definition for distributed propulsion technology in subsonic fixed wing aircrafts.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.
