British Secret Projects Tony Buttler, 2000 A large number of fighter projects have been drawn by British companies over the last fifty years, but very few have turned into hardware, and very little has been published about these fascinating might-have-beens. This book makes extensive use of previously unpublished, primary-source material-much recently declassified. It gives an insight into a secret world where the public has had little idea of what was going on, while at the same time presenting a coherent nationwide picture of fighter development and evolution. Particular emphasis is placed on tender design competitions and some of the events that led to certain aircraft either being canceled or produced. Some of the many and varied types included are the Hawker P.1103/P.1136/P.1121 series, and the Fairey Delta III. The book includes many illustrations, plus specially commissioned renditions of might-have-been types in contemporary markings.

British Secret Projects Tony Buttler, 2004 8 1/2 x 11, 180 b&w photos This title completes a trilogy covering the design and development of British fighters and bombers from the end of the biplane era to the present day. This new volume again emphasizes the designs that were never flown. It covers aircraft projects that were prepared from the mid-1930s onwards and that were influenced by the growing threat of another war with Germany, through to some projects which appeared after the war was over. The latter includes early jets such as the Attacker, Sea Hawk and Venom, which all flew post-war but were designed to wartime or immediate post-war requirements. Among the designs featured in this book are fixed-gun fighters, turret fighters, twin-engine cannon fighters, light, medium and heavy bombers, torpedo bombers and flying boats. As in the trilogy's first two volumes, these designs are covered with detailed descriptions and data and numerous photographs of models or artists' impressions showing how these designs would have looked. Unlike the post-war years, details

of many earlier unbuilt projects have been lost, but fortunately information on a great number of these has survived, and this will form the most complete record to be published on these fascinating machines.

Westland Aircraft Since 1915 Derek N. James,1991 This text describes all the military and civil aircraft built by Westland since the N.1B single-seat seaplane. The helicopters, built now in close collaboration with Sikorsky, and used by armed forces throughout the world, are described in detail.

Kurdish Armour Against ISIS Ed Nash,Alaric Searle,2021-09-16 One of the most remarkable mechanized campaigns of recent years pitted the brutal and heavily armed jihadis of Islamic State against an improvised force belonging to the Kurdish YPG (later the SDF). While some Kurdish vehicles were originally from Syrian Army stocks or captured from ISIS, many others were extraordinary homemade AFVs based on truck or digger mechanicals, or duskas, the Kurds' version of the technical. Before US air power was sent to Syria, these were the Kurds' most powerful and mobile weapons. Co-written by a British volunteer who fought with the Kurds and an academic expert on armoured warfare, this study explains how the Kurds built and used their AFVs in the war against 'Daesh', and identifies as far as possible which vehicles took part in major battles, such as Kobane, Manbij and Raqqa. With detailed new artwork depicting the Kurds' range of armour and many previously unpublished photos, this is an original and fascinating look at modern improvised mechanized warfare.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics

laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Vulcan 607 Rowland White, 2012 It was to be one of the most ambitious operations since 617 Squadron bounced their revolutionary bombs into the dams of the Ruhr Valley in 1943... When Argentine forces invaded the Falklands in the early hours of 2 April 1982, Britain's military chiefs were faced with a real-life Mission Impossible.

Pilot's Notes for Wellington Air Ministry, 1972-06 A series of books that provide, for the first time, the detailed information every pilot needs to know about the aircraft they are flying. Each book in the series covers all aspects of a popular aircraft type and is illustrated throughout with photographs and diagrams.

Desert Sniper Ed Nash, 2019-09-17 What makes an ordinary but highly educated Englishman, with no previous military training, decide to travel and fight in one of the most brutal conflicts on the

planet? Desert Sniper is an extraordinary, true account of one man's journey from well-meaning volunteer to battle-scarred combat sniper, placing himself daily in the line of fire to fight one of the greatest evils of this new century. Ed Nash has travelled across the globe, and is working with refugees in Burma, when he first becomes aware of the terrible atrocities being committed under ISIS's newly established 'Caliphate', covering vast tracts of Iraq and Syria. In June 2015, he chooses to undertake the hazardous journey, via Northern Iraq, to Syria, to join ill-equipped and poorly trained but battle-hardened Kurdish forces as they attempt to halt Daesh's relentless advance. Nash is an articulate, insightful and refreshingly honest companion as he unpacks the shifting complexities of the political and military situation in which he finds himself. As one of a motley band of foreign volunteer fighters - veterans of other conflicts, adventurers and misfits, from many different countries - we follow him through his rudimentary training and early combat operations as he and his companions slowly gain the trust and respect of their Kurdish colleagues. Nash shows us the realities of the war on the ground in Syria in fascinating detail; the privations of the ordinary Kurdish soldiers, the terrible price paid by civilians caught in the cross-fire, the ever-present danger of lethal suicide bombers and occasional moments of striking beauty in amongst the carnage. A modern classic in the making, Desert Sniper will prove to be one of the most unforgettable accounts to emerge from the war against ISIS.

Teach for the Sky James Jackson, 2022-02-23 Building on lessons learned during WWII, there has been continual investment in training aircraft and equipment as aviation technology and aerial warfare has evolved. The Air Staff, the Admiralty and British aircraft companies developed a wide range of aircraft from basic trainers to jet-powered aircraft and helicopters. Drawing on research in company and government archives, Teach for the Sky describes the development of training aircraft

for basic, advanced, operational conversion and aircrew training from the late 1940s to the present day. The planning and requirements behind the trainers such as the Prentice, Balliol, Jet Provost, Varsity, Gnat, Tucano and Hawk are examined, as are many of the design studies that remained on the drawing board. The evolution of the training organization and the challenges faced in adapting the training syllabus to new technologies from 1945 to the present day is also analyzed. Illustrated throughout with photographs, drawings and specially commissioned artwork, Teach for the Sky is a unique reference guide to the aircraft and training methods developed to prepare pilots and aircrew for the frontline since 1945.

Spitfire Eric B. Morgan, Edward Shacklady, 2000 A revised and expanded detailed reference of the Spitfire. The book documents information on more than 22,500 aircraft and offering over 2000 illustrations, including scale plans, action photographs and camouflage and markings artwork. -- Blackwells.

The 100 Hour War Mario Overall, Dan Hagedorn, 2017 In July 1969, while the world was expectant about the upcoming first manned landing on the moon, two little-known Central American States crossed sabers in what was derogatorily coined by the media as 'The Soccer War'. Far from a simple out-of-hand sports passion, this conflict had its complicated origins back in the early 20th century when the North American companies United Fruit and its rival, Standard Fruit, operated in Honduras - and both deemed it necessary to import workers from El Salvador, since the locals were insufficient in numbers. What followed was an exodus of more than 300,000 Salvadorans who settled in Honduras - and for a while, the latter country's government saw this with good eyes. That is until the early 1960s, when political changes and the liberalization of the region's commerce through the Common Market Treaty made it painfully evident that the country that benefited the most from it was

El Salvador, while Honduras would be destined to carry a heavy economic burden. Inevitably, it chilled the relations between the two countries and had a direct bearing in the treatment from the Hondurans towards the Salvadoran peasants. Amidst sporadic violence against the immigrant peasants, the two governments began negotiations aimed at solving the immigration problem and signed three agreements. However, while the negotiations were taking place, clandestine armed groups were organized in Honduras with the purpose of harassing and controlling the Salvadoran people living in that country. This situation was worsened by a coup d'etat that brought to the presidency the Honduran General Oswaldo Lopez Arellano, who had a very different point of view than his predecessor regarding the immigrants' situation. Shortly after, the expelling of thousands of Salvadorans began. The return of the peasants to El Salvador brought a series of problems for that country, since all were returning unemployed and needing food, clothing and some kind of shelter - all of this in the midst of an economic crisis that not even the advantages obtained through the Common Market Treaty had been able to alleviate. Thus, it didn't take long for the Salvadoran society to begin clamoring for some sort of military response against Honduras. With this delicate political background, the eliminatory rounds for the Jules Rimet World Soccer Cup (to be held in Mexico the next year) began - and during these, the national teams of El Salvador and Honduras would have to face each other in order to obtain a classification. During those games, the violence against Salvadoran immigrants in Honduras increased and caused strong protests from the Salvadoran Government, which ended in the rupturing of diplomatic relations and followed by additional border incidents, which included the strafing of a Honduran airliner while it was taking off from Nueva Ocotepeque. Eleven days later, the war began. This book, backed by more than 20 years of research, explores meticulously the actions undertaken by both countries in the air and on the ground during

this short but intense confrontation, and that saw the last dogfights between World War II-era piston-engine aircraft in the world. Besides an impressive selection of photos, the book also features a section of color profiles and markings, and a set of tables detailing the identities of the aircraft operated by both countries during the conflict.

Reinventing the Propeller Jeremy R. Kinney, 2017-03-24 An international community of specialists reinvented the propeller during the Aeronautical Revolution, a vibrant period of innovation in North America and Europe from World War I to the end of World War II. They experienced both success and failure as they created competing designs that enabled increasingly sophisticated and 'modern' commercial and military aircraft to climb quicker and cruise faster using less power. Reinventing the Propeller nimbly moves from the minds of these inventors to their drawing boards, workshops, research and development facilities, and factories, and then shows us how their work performed in the air, both commercially and militarily. Reinventing the Propeller documents this story of a forgotten technology to reveal new perspectives on engineering, research and development, design, and the multi-layered social, cultural, financial, commercial, industrial, and military infrastructure of aviation.

Wings of the Luftwaffe Eric Brown, 1993 At the end of World War II, Eric Brown had the extraordinary experience of testing no fewer than 55 captured individual German aircraft types. These ranged from such exotic creations as the prone-pilot Berlin B9 and Horten IV, the push-and-pull Dornier DO335 and the remarkable little Heinkel He 162 Volksjager, to the highly innovative combat types that were entering the inventory of the Luftwaffe shortly before the demise of Germany's Third Reich. Brown also interrogated many of the leading German wartime aviation personalities, such as Willy Messerschmitt, Ernst Heinkel, Kurt Tank and Hanna Reitsch. From this background knowledge of German aviation he has selected those he considers the most important, and presents detailed

descriptions of their background and characteristics.

Westland Lysander Manual 1936-44 (all marks) Edward Wake-Walker,2014-12-01 Conceived in the mid-Thirties for the RAF as an Army co-operation and liaison aircraft, Westland Aircraft designed and built the rugged high-wing monoplane Lysander with a fixed, spatted undercarriage. It had an exceptional field of view for both pilot and observer, and was armed with two forward firing machine guns and a machine gun fired from the rear cockpit.

Twelve Years a Slave Solomon Northup,2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir

and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

How to Draw Planes (WWII-Era Reprint Edition) Frank A. A. Wootton, 2013-10 Frank A. A. Wootton offers good advice for artists wanting to try their hand at aircraft. Drawing planes (this book was published during World War II, so illustrations are from that period) is covered along with composition, light and shading, and action sequences. This is a great little book that novice artists will find a very useful resource.
