**The MIR Space Station** David M. Harland, 1997-10 This book explores the development and operation of the Mir Space Station over the last ten years, focusing on the engineering technology aspects of constructing and operating an orbital complex designed to be occupied by humans for long periods of time.

The Story of Space Station Mir David M. Harland, 2007-12-26 \* Details how a succession of Salyut space stations led to the development of Mir. \* Depicts Mir's assembly piece by piece, in space, between 1982 and 1996. \* Describes how Mir became an international research laboratory. \* Advises how Mir technology went on to form the 'core modules' of the ISS. \* The definitive account of Mir throughout its life through to de-orbiting in March 2001.

Shuttle-Mir Clay Morgan, 2001

**Phase 1 Program Joint Report**, 1999 Each of the Phase 1 Program Joint Working Groups describes the organizational structure and work processes that they used during the program, joint accomplishments, lessons learned, and applications to the International Space Station Program.

*Paper Astronaut* Juliette Cezzar, 2009-06-23 From the creator of Paper Pilot and Paper Captain, Paper Astronaut is a beautifully illustrated voyage into deep space, combining stunning archival photographs and colorful technical drawings with expertly designed die-cut models that readers can actually cut out and assemble. Published for the fortieth anniversary of the moon landing in 1969—and introduced by Buzz Aldrin—the book includes histories of twenty feats of aeronautic engineering drawn from half a century of space programs around the world, from Apollo 11 to the Soviet space station Mir and China's Shenzhou 7 capsule, and featuring the most iconic designs of fifty years of space exploration. Each spacecraft is accompanied by amazing stories, fascinating facts and statistics about the universe around them, and mesmerizing photographs of the vessels in space. Sixty-four pages of the book are devoted to finely crafted die-cut paper models of the featured rockets, presented with clear instructions for assembly and helpful advice for deploying your galactic fleet.

**Mir Hardware Heritage** David S. F. Portree, 1995 The heritage of the major Mir complex hardware elements is described. These elements include Soyuz-TM and Progress-M ; the Kvant, Kvant 2, and Kristall modules ; and the Mir base block. Configuration changes and major mission events of Salyut 6, Salyut 7, and Mir multiport space stations are described in detail for the period 1977-1994. A comparative chronology of U.S. and Soviet/Russian manned spaceflight is also given for that period. The 68 illustrations include comparative scale drawings of U.S. and Russian spacecraft as well as sequential drawings depicting missions and mission events.

**Space Shuttle Missions Summary (NASA/TM-2011-216142)** Robert D. Legler, Floyd V. Bennett, 2011-09-01 Full color publication. This document has been produced and updated over a 21-year period. It is intended to be a handy reference document, basically one page per flight, and care has been exercised to make it as error-free as possible. This document is basically as flown data and has been compiled from many sources including flight logs, flight rules, flight anomaly logs, mod flight descent summary, post flight analysis of mps propellants, FDRD, FRD, SODB, and the MER shuttle flight data and inflight anomaly list. Orbit distance traveled is taken from the PAO mission statistics.

*The Politics of Space Security* James Moltz, 2011-06-29 The past five decades have witnessed often fierce international rivalry in space, but also surprising military restraint. Now, with an increasing number of countries capable of harming U.S. space assets, experts and officials have renewed a long-standing debate over the best route to space security. Some argue that space defenses will be needed to protect critical military and civilian satellites. Others argue that space should be a sanctuary from deployed weapons and military conflict, particularly given the worsening threat posed

by orbital space debris. Moltz puts this debate into historical context by explaining the main trends in military space developments since Sputnik, their underlying causes, and the factors that are likely to influence their future course. This new edition provides analysis of the Obama administration's space policy and the rise of new actors, including China, India, and Iran. His conclusion offers a unique perspective on the mutual risks militaries face in space and the need for all countries to commit to interdependent, environmentally focused space security.

**Dragonfly** Bryan Burrough, 2000-03-01 Presents a behind-the-scenes account of NASA's ambitious and sometimes tumultuous involvement with Russia's problem-plagued Mir space station over three years.

**Preparing for the High Frontier** National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee on Human Spaceflight Crew Operations, 2011-11-09 As the National Aeronautics and Space Administration (NASA) retires the Space Shuttle and shifts involvement in International Space Station (ISS) operations, changes in the role and requirements of NASA's Astronaut Corps will take place. At the request of NASA, the National Research Council (NRC) addressed three main questions about these changes: what should be the role and size of Johnson Space Center's (JSC) Flight Crew Operations Directorate (FCOD); what will be the requirements of astronaut training facilities; and is the Astronaut Corps' fleet of training aircraft a cost-effective means of preparing astronauts for NASA's spaceflight program? This report presents an assessment of several issues driven by these questions. This report does not address explicitly the future of human spaceflight.

**Spaceships** Ron Miller, 2016 An illustrated guide to real and imagined spaceships, and how popular culture influenced the development of each-- Provided by publisher.

**Methods for Developing Spacecraft Water Exposure Guidelines** National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on Spacecraft Water Exposure Guidelines, 2000-10-18 The National Aeronautics and Space Administration (NASA) maintains an active interest in the environmental conditions associated with living and working in spacecraft and identifying hazards that might adversely affect the health and well-being of crew members. Despite major engineering advances in controlling the spacecraft environment, some water and air contamination appears to be inevitable. Several hundred chemical species are likely to be found in the closed environment of the spacecraft, and as the frequency, complexity, and duration of human space flight increase, identifying and understanding significant health hazards will become more complicated and more critical for the success of the missions. NASA asked the National Research Council (NRC) Committee on Toxicology to develop guidelines, similar to those developed by the NRC in 1992 for airborne substances, for examining the likelihood of adverse effects from water contaminants on the health and performance of spacecraft crews. In this report, the Subcommittee on Spacecraft Water Exposure Guidelines (SWEGs) examines what is known about water contaminants in spacecraft, the adequacy of current risk assessment methods, and the toxicologic issues of greatest concern.

**Galina Balashova** Philipp Meuser, 2022-02 This monograph on the work of the Russian architect Galina Balashova presents a unique collection of designs for Soviet cosmonautics. These include plans and engineering drawings for Soyuz capsules and the space stations Salyut and Mir. Balashova acted as a consultant to the Buran program, the Soviet counterpart to the American Space Shuttle. Trilingual in English, Russian, German

**Spacewalker** Jerry Lynn Ross, John Norberg, 2013 The majority of this book is an insider's account of the US Space Shuttle program, including the unforgettable experience of launch, the delights of weightless living, and the challenges of constructing the International Space Station. Ross is a

uniquely qualified narrator. During seven spaceflights, he spent 1,393 hours in space, including 58 hours and 18 minutes on nine space walks. Life on the ground is also described, including the devastating experiences of the Challenger and Columbia disasters. --

Architecture for Astronauts Sandra Häuplik-Meusburger, 2011-10-18 Living and working in extra-terrestrial habitats means being potentially vulnerable to very harsh environmental, social, and psychological conditions. With the stringent technical specifications for launch vehicles and transport into space, a very tight framework for the creation of habitable space is set. These constraints result in a very demanding "partnership" between the habitat and the inhabitant. This book is the result of researching the interface between people, space and objects in an extra-terrestrial environment. The evaluation of extra-terrestrial habitats in comparison to the user's perspective leads to a new framework, comparing these buildings from the viewpoint of human activity. It can be used as reference or as conceptual framework for the purpose of evaluation. It also summarizes relevant human-related design directions. The work is addressed to architects and designers as well as engineers.

Orbital Debris National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Space Debris, 1995-07-07 Since the beginning of space flight, the collision hazard in Earth orbit has increased as the number of artificial objects orbiting the Earth has grown. Spacecraft performing communications, navigation, scientific, and other missions now share Earth orbit with spent rocket bodies, nonfunctional spacecraft, fragments from spacecraft breakups, and other debris created as a byproduct of space operations. Orbital Debris examines the methods we can use to characterize orbital debris, estimates the magnitude of the debris population, and assesses the hazard that this population poses to spacecraft. Potential methods to protect spacecraft are explored. The report also takes a close look at the projected future growth in the debris population and evaluates approaches to reducing that growth. Orbital Debris offers clear recommendations for targeted research on the debris population, for methods to improve the protection of spacecraft, on methods to reduce the creation of debris in the future, and much more.

**Recapturing a Future for Space Exploration** National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2012-01-30 More than four decades have passed since a human first set foot on the Moon. Great strides have been made in our understanding of what is required to support an enduring human presence in space, as evidenced by progressively more advanced orbiting human outposts, culminating in the current International Space Station (ISS). However, of the more than 500 humans who have so far ventured into space, most have gone only as far as near-Earth orbit, and none have traveled beyond the orbit of the Moon. Achieving humans' further progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions, but the potential rewards remain substantial. During its more than 50-year history, NASA's success in human space exploration has depended on the agency's ability to effectively address a wide range of biomedical, engineering, physical science, and related obstacles—an achievement made possible by NASA's strong and productive commitments to life and physical sciences research for human space exploration, and by its use of human space exploration infrastructures for scientific discovery. The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA, which are all the more remarkable given budgetary challenges and changing directions within the agency. In the past decade, however, a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope, with the result that the agency is poorly positioned to take

full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory, or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities. Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research, the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will bring the space community, the U.S. public, and policymakers to an understanding that we are ready for the next significant phase of human space exploration. The goal of this report is to lay out steps and develop a forward-looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight—thereby enabling the U.S. space program to deliver on new exploration initiatives that serve the nation, excite the public, and place the United States again at the forefront of space exploration for the global good.

*Biotechnology in Space* Günter Ruyters, Christian Betzel, Daniela Grimm, 2017-12-21 This book summarizes the early successes, drawbacks and accomplishments in cell biology and cell biotechnology achieved by the latest projects performed on the International Space Station ISS. It also depicts outcomes of experiments in tissue engineering, cancer research and drug design and reveals the chances that research in Space offers for medical application on Earth. This SpringerBriefs volume provides an overview on the latest international activities in Space and gives an outlook on the potential of biotechnological research in Space in future. This volume is written for students and researchers in Biomedicine, Biotechnology and Pharmacology and may specifically be of interest to scientists with focus on protein sciences, crystallization, tissue engineering, drug design and cancer research.

**Surveyor Program Results** Surveyor Program (U.S.), United States. Surveyor Program Office, 1969 Summary of lunar data and scientific observations generated by Surveyor landings on Moon.

Outpost in Orbit DAVID J. GODWIN SHAYLER (ROBERT.), Robert Godwin, 2018-10 The story of the space station encompasses the efforts of thousands of people going back many generations and hailing from many different countries. The concept of a space station seems to have sprung forth fully-formed in the mind of Edward Everett Hale in the summer of 1869. In his short story *The Brick Moon* Hale concluded that an orbiting manned space station could provide a totally new reference point which ships captains could use for navigation. Hale went on to become the chaplain in the United States' Senate and in 2019 we will be celebrating the sesquicentennial of his story. We will also be celebrating the 20th anniversary of the extraordinary International Space Station. The International Space Station represents what can happen when people from different backgrounds and different cultures come together with parallel dreams and aspirations. The ISS exists because of Russian mathematicians, American doctors, German scientists, Canadian engineers, British physicists, Japanese roboticists, Italian mechanics swap any of the occupations with any of the nationalities (or almost any other) and it still holds true. The list goes on and on. This truly astonishing feat of human ingenuity would not exist without the contributions and insights of people from almost every walk of life going all the way back to Isaac Newton. In this anniversary tribute the reader is taken through a pictorial history of the space station which is unprecedented in its scope. Beginning with Hale it takes the reader through over 100 space stations designed by American, Russians, German and Brits before taking you aboard the magnificent ISS using hundreds of pictures, many never published before. This 320 page full colour book was created with the assistance of the National Aeronautics and Space Administration which provided unprecedented access to engineers, managers, astronauts and historians. Interviews were conducted with retirees and pioneers as well as the principals from NASA, the Russian Space Agency, the

European Space Agency, the Canadian Space Agency and the Japanese Space Agency to create a unique insight into the trials and triumphs of working on the ISS. Featuring over 800 colour images running all the way from Tsiolkovsky's designs in the early 20th century to the completed International Space Station, some of the people featured in the book include Robert Gilruth, James Webb, Wernher von Braun, Hermann Oberth, JD Bernal, Krafft Ehricke, Dan Goldin, Victor Blagov, Alan Thirkettle, Chiaki Mukai, Arthur C Clarke, Hermann Koelle, Bonnie Dunbar, Frank Williams, Vladimir Chelomei, Sergei Krikalev, William Shepard, Lynn Cline, Chris Hadfield, Takao Doi, Jean Olivier, Robert Crippen, Dmitri Kondratyev, Dave Williams, Robert Thirsk, Michael Foale, James Beggs, Owen Garriot, Kent Rominger, Henry Hartsfield, Bob Cabana, Peggy Whitson, Kathy Sullivan, Konstantin Feoktistov, and many more.
