George Bradford

Germany's Secret Weapons of World War II Roger Ford,2021-03-02 Broken down by weapon types, the book includes reference tables, diagrams, colorful maps, charts and photographs, presenting all the core data in easy-to-follow formats.

The Illustrated Encyclopedia of Combat Aircraft of World War II Bill Gunston,1978 Contains more than seven hundred illustrations of military aircraft of World War II used by both Allied and Axis Countries, together with capsule specifications and history

Air Transport System Dieter Schmitt,Volker Gollnick,2015-10-06 The book addresses all major aspects to be considered for the design and operation of aircrafts within the entire transportation chain. It provides the basic information about the legal environment, which defines the basic requirements for aircraft design and aircraft operation. The interactions between airport, air traffic management and the airlines are described. The market forecast methods and the aircraft development process are explained to understand the very complex and risky business of an aircraft manufacturer. The principles of flight physics as basis for aircraft design are presented and linked to the operational and legal aspects of air transport including all environmental impacts. The book is written for graduate students as well as for engineers and experts, who are working in aerospace industry, at airports or in the domain of transport and logistics.

Allied Armored Fighting Vehicles 1:72 Scale George Bradford,2009 Filled with 1:72-scale drawings of armored vehicles from the U.S., Britain, Canada, and Russia, including: M4 Sherman medium tank (U.S.) T1E3 Aunt Jemima mine exploder (U.S.) M18 Hellcat tank destroyer (U.S.) Mk VI Crusader cruiser tank (Britain) Crocodile flamethrower (Britain) Ram I cruiser tank (Canada) T-34 medium tank (Russia) SU-100 tank destroyer (Russia) And dozens more . . .

Modern Peoplehood John Lie,2011-04 [A] most impressive achievement by an extraordinarily intelligent, courageous, and—that goes without saying—'well-read' mind. The scope of this work is enormous: it provides no less than a comprehensive, historically grounded theory of 'modern peoplehood,' which is Lie's felicitous umbrella term for everything that goes under the names 'race,' 'ethnicity,' and nationality.' Christian Joppke, American Journal of Sociology Lie's objective is to treat a series of large topics that he sees as related but that are usually treated separately: the social construction of identities, the origins and nature of modern nationalism, the explanation of genocide, and racism. These multiple themes are for him aspects of something he calls 'modern peoplehood.' His mode of demonstration is to review all the alternative explanations for each phenomenon, and to show why each successively is inadequate. His own theses are controversial but he makes a strong case for them. This book should renew debate. Immanuel Wallerstein, Yale University and author of *The Decline of American Power: The U.S. in a Chaotic World*

American Armies and Battlefields in Europe ,2018-08-17 This volume was first published by the American Battle Monuments Commission in 1938 and was republished by CMH in 1992 to commemorate the American Expeditionary Forces'

seventy-fifth birthday. *American Armies and Battlefields in Europe*, a facsimile edition to commemorate the seventy-fifth birthday of the American Expeditionary Forces, is a unique, illustrated volume that captures the AEF's lessons of battle during World War I. Based on the series of battlefield tours conducted for staff officers at General John J. Pershing's headquarters, the operational chapters describe the military situation, giving detailed accounts of actual fighting supported by maps and sketches, and a summary of events and service of combat divisions. Topical chapters on the Services of Supply, the U.S. Navy, military cemeteries and memorials, and other interesting and useful facts conclude the narrative. For scholars and students of the Great War, as well as veterans and their descendants wishing to find battle sites of long ago, this guidebook remains the most authoritative and easily usable source for visitors to the AEF's battlefields. The American Battle Monuments Commission, a small independent agency established by Congress in 1923 at the request of General John J. Pershing, is the guardian of America's overseas commemorative cemeteries and memorials. Its mission is to honor the service, achievements, and sacrifice of the United States armed forces. Philip, Prince of Greece Constantinos Lagos, John Carr, 2021-06-30 Many books have been written about the life of Prince Philip, the Duke of Edinburgh, yet there always seem to be corners of his long life that have remained unexplored. In this long look back into his early years, Constantinos Lagos and John Carr uncover hitherto unknown aspects of Philip's life as a Greek prince and his gradual transformation from a mere appendage of the troubled Greek royal family to an enduring pillar of the British monarchy. For the first time, Lagos and Carr delve into neglected Greek archives for a fascinating picture of Philip's early Greek life and the constant insecurity that dogged his steps as his father Prince Andrew of Greece and mother Princess Alice struggled to order their own lives in the maelstrom of unstable and often violent Greek politics in a Europe sliding towards world war. The Greek royal family, in which Philip has his roots, is dealt with at length, to bring out the particular family history and circumstances that played no small part in shaping his personality. Anyone curious about how Prince Philip actually grew up will find in this book a wealth of eye-opening, often startling details that will add more brush strokes to the portrait of the often-elusive but real Prince Philip.

Nieuport Aircraft of World War One Ray Sanger, 2002 The French firm of Nieuport built some of the most numerous, best-looking and effective fighting planes of World War I -- they type 17 and 29 gaining particular fame. Ray Sanger's authoritative book covers all these aircraft in detail, paying attention to both technical detail and operational use. Illustrated throughout with rare photographs this will be an indispensable volume for any World War I aviation library.

Crete 1941 Peter Antill,2012-11-20 Operation Mercury, the German airborne assault on the island of Crete in May 1941, was the first strategic use of airborne forces in history. The assault began on 20 May, with landings near the island's key airports, and reinforcements the next day allowed the German forces to capture one end of the runway at Maleme. By 24 May, the Germans were being reinforced by air on a huge scale and on 1 June Crete surrendered. This book describes how desperately close the battle had been and explains how German losses so shocked the Führer that he never again authorised a major airborne operation.

Aircraft of the Third Reich William Green,2011-09 Developed from William Green's seminal work and completely updated, this volume covers over 90 aircraft types from the Gotha Go 242/Go 244 assault glider to the Junkers F.13 and G.38 interwar airliners.

Introduction to UAV Systems Paul G. Fahlstrom,Thomas J. Gleason,2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level.

As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Landscapes and Landforms of the Maltese Islands Ritienne Gauci,John A. Schembri,2019-08-04 This edited volume brings together a collection of works that comprehensively address both the myriad geomorphological landscapes of the Maltese Islands and how their evolution has been shaped over various time-scales by different sets of processes. Additionally, the work highlights how the small geographical setting of the Maltese Islands helped to closely connect these landscapes with Maltese society and as a result, they have evolved from stand-alone examples of geomorphology to important backdrops of Maltese cultural identity. Most of the contributing authors are academics – both local and foreign – with a research focus on the geomorphology of the Maltese Islands. However, the editors have also (and purposefully) chosen other contributors from governmental institutions and research agencies, who complement the geomorphological research with their proactive work in selected case studies on Maltese landscapes.
