Specialized Training for Oil Tankers ,2006

Tanker Spills Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,Marine Board,1991-02-01 Can we design an oil tanker that meets our complex demands for environmental protection, economical operation, and crew safety? This volume evaluates and ranks a wide variety of tank ship hull designs proposed by experts around the world. Based on extensive research and studies, the book explores the implications of our rising demand for petroleum and increase in tanker operations; U.S. government regulations and U.S. Coast Guard policies regarding designs for new tank vessel construction; how new ship design would affect crew safety, maintenance, inspection, and other technical issues; the prospects for retrofitting existing tankers to reduce the risk of oil spills; and more. The conclusions and recommendations will be particularly important to maritime safety regulators in the United States and abroad; naval architects; ship operators and engineers; and officials in the petroleum, shipping, and marine insurance industries.

CSS Alabama Andrew Bowcock,2002 Built secretly by Laird's on the Mersey, to the order of the Confederate States during the American Civil War, the Alabama embarked on a hugely destructive world-wide campaign against Federal shipping that made the ship a household name. Eventually tracked down by the Union sloop Kearsarge, the raider was sunk off Cherbourg in an epic ship-to-ship action. However, the almost legendary quality of the ship's career was further enhanced post-war by a bestselling autobiography by Alabama's captain, Raphael Semmes. Nor did the ship's impact on history finish with her sinking, as her depredations caused a diplomatic row between the USA and Britain that was not resolved until the latter agreed to substantial compensation in 1871.

The Use of Large Tankers in Seasonal First-year Ice and Severe Sub-zero Conditions Oil Companies International Marine Forum,Oil Companies International Maritime Forum. OCIMF,2010 With the changes that have occurred in the Russian Federation, the tanker market has experienced an increase in the export of crude oil by large tankers from Baltic terminals impacted by the potential for winter ice navigation. This trend has continued elsewhere in the world as crude export terminals have been established or are planned in other ice navigation areas, such as the Barents Sea, White Sea and in proximity to Sakhalin Island (Eastern Russian Federation). Some sectors of the industry have been used to dealing with the more traditional high ice class, smaller tankers designed specifically for escorted or unescorted ice transit. What is relatively new to the industry is the increase in demand for larger-sized crude tankers of low, or no, ice class to trade out of an increasing number of ports subjected to first-year ice formation. Areas commonly affected by first-year ice include the Baltic Sea, White Sea, Barents Sea, the Eastern coast of Canada, Cook Inlet and in the proximity of Sakhalin Island in the Eastern Russian Federation. The guidance is primarily aimed at the use of low, or no, ice class tankers, from 50,000 tonnes deadweight upwards, likely to encounter first-year ice.

How Tobacco Smoke Causes Disease ,2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
