My Years with the IAF Pratap Chandra Lal,1986 This is the first time that an Air Chief is sharing his thoughts and memories with the reading public. His span of service covers a period of thirty-three years: from the end of 1939 to the beginning of 1973. It includes the Burma campaign of World War II, the restricted fighting in Kashmir in 1947 and 1948, the Chinese debacle in 1962 and the two full scale wars with Pakistan in 1965 and 1971. He had 4,274 hrs of flying with the Air Force to his credit and the experience of flying 58 types of aircraft from Wapitis to supersonic jets. In 1965 he was the Vice Chief of Air Staff and in 1971 the Chief. His honesty and forthrightness many readers will find engaging& but perhaps a few who were on the scene then may find them unpalatable. In a way this is the story of aviation in India, in particular of the Indian Air Force. It is a story of a real life adventure the genesis, growth and achievements of the youngest of the three defence services. Sir Winstom Churchill said of the RAF: Never before in the history of human conflict was so much owed by so many to so few. That is true also of the Indian Air Force. Though this does not purport to be a history of the Indian Air Force without it no history would be complete.

Forging the Ninth Army-XXIX TAC Team Christopher M. Rein,2019 This study seeks to explore the roots of the successful innovation by examining the development of air ground doctrine, the early failures and efforts to revise it in the Mediterranean theater, and the stateside maneuvers that trained the bulk of the Army's higher-number infantry divisions originally from the National Guard and Reserves that carried much of the load in 1944 and 1945-- Provided by publisher.

A Historical Review and Analysis of Army Physical Readiness Training and Assessment Whitfield East,2013-12 The Drillmaster of Valley Forge-Baron Von Steuben-correctly noted in his Blue Book how physical conditioning and health (which he found woefully missing when he joined Washington's camp) would always be directly linked to individual and unit discipline, courage in the fight, and victory on the battlefield. That remains true today. Even an amateur historian, choosing any study on the performance of units in combat, quickly discovers how the levels of conditioning and physical performance of Soldiers is directly proportional to success or failure in the field. In this monograph, Dr. Whitfield Chip East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the

pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers for the physical demands of combat. Our culture is becoming increasingly 'unfit, due to poor nutrition, a lack of adequate and formal exercise, and too much technology. Still, the Soldiers who come to our Army from our society will be asked to fight in increasingly complex and demanding conflicts, and they must be prepared through new, unique, and scientifically based techniques. So while Dr. East's monograph is a fascinating history, it is also a required call for all leaders to better understand the science and the art of physical preparation for the battlefield. It was and is important for us to get this area of training right, because getting it right means a better chance for success in combat.

Securing the Future of U.S. Air Transportation National Research Council, Transportation Research Board, Studies and Information Services, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee on Aeronautics Research and Technology for Vision 2050, 2003-12-18 As recently as the summer of 2001, many travelers were dreading air transportation because of extensive delays associated with undercapacity of the system. That all changed on 9/11, and demand for air transportation has not yet returned to peak levels. Most U.S. airlines continue to struggle for survival, and some have filed for bankruptcy. The situation makes it difficult to argue that strong action is urgently needed to avert a crisis of undercapacity in the air transportation system. This report assesses the visions and goals for U.S. civil aviation and technology goals for the year 2050.

Space Shuttle Missions Summary (NASA/TM-2011-216142) Robert D. Legler, Floyd V. Bennett, 2011-09-01 Full color publication. This document has been produced and updated over a 21-year period. It is intended to be a handy reference document, basically one page per flight, and care has been exercised to make it as error-free as possible. This document is basically as flown data and has been compiled from many sources including flight logs, flight rules, flight anomaly logs, mod flight descent summary, post flight analysis of mps propellants, FDRD, FRD, SODB, and the MER shuttle flight data and inflight anomaly list. Orbit distance traveled is taken from the PAO mission statistics.

Torpedo Squadron Four - A Cockpit View of World War II Gerald W. Thomas, 2010-10 Thomas, in the only combat account of World War II Torpedo Bomber pilot ever published, relates his 25 months of service with Torpedo Squadron 4 (VT-4) on the USS RANGER, USS BUNKER HILL, and USS ESSEX. Thomas served in both the Atlantic and Pacific Theaters, and in some of the most important World War II battles. While on the RANGER, he participated in OPERATION LEADER, the most significant attack on Northern Europe by a US carrier during the war. During LEADER, while attacking a freight barge carrying 40 tons of ammunition, Thomas' plane was hit by anti-aircraft fire. Surprisingly, in spite of the considerable engine damage, the plane made it back to the RANGER, where Thomas crash-landed. That landing was his 13th

official carrier landing. In the Pacific, Thomas participated in the numerous actions against Japanese targets in the Philippines, including strikes on Ormoc Bay, Cavite, Manila, Santa Cruz, San Fernando, Lingayen, Mindoro, Clark Field and Aparri. Following these actions, Thomas' squadron made strikes on Formosa, French Indo-China, Saigon, Pescadores, Hainan, Amami O Shima, Iwo Jima, Okinawa, and Japan. The attack on Japan was the first attack on Japan from an aircraft carrier since the Doolittle Raid. While on the ESSEX, just after Thomas had returned from a strike on Santa Cruz, the ship was hit by a Kamikaze piloted by Yoshinori Yamaguchi, Yoshino Special Attack Corps. Yamaguchi was flying a Yokosuba D4Y3 dive bomber. The Kamikaze attack killed 16 crewman and wounded 44. Returning from a strike on Hainan, off the Chinese coast, Thomas' plane ran out of fuel. After a harrowing water landing, Thomas and squadron photographer Montague succeeded in inflating and launching one rubber boat and his crewman Gress another. After a long day in pre-Typhoon weather with 40 foot swells, the three were rescued by the USS SULLIVANS. In recounting the events in this book, Thomas draws upon his daily journal, his letters home, and extensive interviews and research conducted over 40 years with fellow pilots and crewman. The book cites 20 interviews and 5 combat journals, and contains 209 photos documenting the ships, planes, men, and combat actions of Torpedo Squadron 4. Many of the photographs were collected by Thomas during the war and include gun photo shots, recon photos, and, remarkably, a picture of the tail of Thomas' Torpedo plane as it sinks in the China Sea following his water crash landing.

Lifespan David A. Sinclair, Matthew D. LaPlante, 2019-09-10 A NEW YORK TIMES BESTSELLER "Brilliant and enthralling." —The Wall Street Journal A paradigm-shifting book from an acclaimed Harvard Medical School scientist and one of Time's most influential people. It's a seemingly undeniable truth that aging is inevitable. But what if everything we've been taught to believe about aging is wrong? What if we could choose our lifespan? In this groundbreaking book, Dr. David Sinclair, leading world authority on genetics and longevity, reveals a bold new theory for why we age. As he writes: "Aging is a disease, and that disease is treatable." This eye-opening and provocative work takes us to the frontlines of research that is pushing the boundaries on our perceived scientific limitations, revealing incredible breakthroughs—many from Dr. David Sinclair's own lab at Harvard—that demonstrate how we can slow down, or even reverse, aging. The key is activating newly discovered vitality genes, the descendants of an ancient genetic survival circuit that is both the cause of aging and the key to reversing it. Recent experiments in genetic reprogramming suggest that in the near future we may not just be able to feel younger, but actually become younger. Through a page-turning narrative, Dr. Sinclair invites you into the process of scientific discovery and reveals the emerging technologies and simple lifestyle changes—such as intermittent fasting, cold exposure, exercising with the right intensity, and eating less meat—that have been shown to help us live younger and healthier for longer. At once a roadmap for taking charge of our own health destiny and a bold new vision for the future of humankind, Lifespan will forever change the way we think about why we age and what we can do about it.

Crew Resource Management Training Norman MacLeod, 2021-05-05 The book provides a data-driven approach to real-world crew resource management (CRM) applicable to commercial pilot performance. It addresses the shift to a systems-based resilience thinking that aims to understand how worker

performance provides a buffer against failure. This book will be the first to bring these ideas together. Taking a competence-based approach offers a more coherent, relevant approach to CRM. The book presents relevant, real-world examples of the concepts and outlines a change in thinking around pilot performance and data interpretation that is overdue. Airlines, pilots and aviation industry professionals will benefit from the insights into organisational design and alternative approaches to training. FEATURES Approaches CRM from a competence-based perspective Uses a systems model to bring coherence to CRM Includes a chapter on using blended learning and virtual reality to deliver CRM Features research on work/life balance, morale, pilot fatigue and link to error Operationalises 'resilience engineering' in a crew context

USS Franklin CV-13 War Damage Report U. S. Navy Department Staff,Us Navy,2013-12-16 USS Franklin CV-13 ...also known as the ship that would not die. 1-1This is a long report. An effort has been made to present a comprehensive summation of the many design and damage control problems which were disclosed or emphasized by the war experiences of Franklin. In addition, various pertinent war experiences of other large carriers have been considered in this report. 1-2The damage sustained by Franklin as a result of the actions of 13 and 15 October 1944 was superficial and is included in this report only for the purpose of rendering her damage history complete. The major damage sustained in each of the actions of 30 October 1944 and 19 March 1945 demonstrates the effectiveness of bomb hits when received by aircraft carriers during the extremely vulnerable period just prior to and during periods of launching strikes. The damage sustained on 30 October is a reasonably good example of what may be expected from a suicide plane crash and subsequent fire on a carrier having a full complement of planes on board which are gassed but not armed except for small caliber ammunition. Similarly, the damage sustained on 19 March may be considered as about the maximum to be expected from fires and detonations of large numbers of bombs and rockets on the flight and hangar decks when a carrier having heavily armed, fully fueled planes aboard is hit by one or more bombs properly placed. 1-3The latter two cases of damage to Franklin illustrate thoroughly the ability of modern U.S. aircraft carriers to survive extensive damage from plane crashes, fire and heavy bombs. The basic design and construction of this class of carrier, which was developed prior to World War II and therefore without the benefit of war experience, is favorably reflected in the manner in which Franklin absorbed heavy damage. Materiel alterations and improvements in damage control organization and technique during the war further increased the ability of this class carrier to minimize potentially severe damage. At the same time many lessons have been obtained from the

experiences of Franklin and other cases of war damage and results of this knowledge have been and will be incorporated in existing ships where feasible and in future design and construction. 1-4This report is based on the references, inspections of Franklin upon her return to this country, and informal interviews with various officers attached to Franklin by representatives of this Bureau.

The Tongue and Quill Air Force,2019-10-11 The Tongue and Quill has been a valued Air Force resource for decades and many Airmen from our Total Force of uniformed and civilian members have contributed their talents to various editions over the years. This revision is built upon the foundation of governing directives and user's inputs from the unit level all the way up to Headquarters Air Force. A small team of Total Force Airmen from the Air University, the United States Air Force Academy, Headquarters Air Education and Training Command (AETC), the Air Force Reserve Command (AFRC), Air National Guard (ANG), and Headquarters Air Force compiled inputs from the field and rebuilt The Tongue and Quill to meet the needs of today's Airmen. The team put many hours into this effort over a span of almost two years to improve the content, relevance, and organization of material throughout this handbook. As the final files go to press it is the desire of The Tongue and Quill team to say thank you to every Airman who assisted in making this edition better; you have our sincere appreciation!

Connie: The USS Constellation and the Last 50-Star Union Jack Gregory Martinez,2018-04-26 Growing up in Sea Bright, New Jersey, on the shores of the Atlantic Ocean, Gregory Martinez became engrossed with living by the sea. One day, he received a very distinguished letter addressed to him from the President of the United States. The Selective Service Department of the United States, had directed him to serve in the Armed Forces and report for active duty on July 14, 1970. Seeking guidance from his father, he was told Go join the Navy. Do what you have to; get something positive out of the experience. Learn all you can. This became Greg's first mission. On April 16, 1971, Greg reported aboard the 4.4 acre aircraft carrier, USS Constellation (CVA-64). By September 1971, the ship and her crew, including the air wing, were combat-ready for deployment. Interspersed with combat duties, Greg experienced riveting life adventures both onboard and ashore during his years with Connie. After his Honorable Discharge, Greg began to feel the calling of his ship. Unsure what to make of these feelings, he slowly permitted himself to be drawn in by her. It eventually became clear that Greg needed to learn more about Connie and what was occurring during her tenure at sea. Connie-a ship that cannot and will not be forgotten-had a profound and lasting effect on Greg and others who have sailed aboard her. Greg's final mission and its results are revealed in the concluding chapters of the book; a mission which no one, not even Greg himself, could have ever predicted.
