United States Naval Aviation, 1919-1941 E.R. Johnson, 2011-04-29 Within six months of the devastating attack on Pearl Harbor, the U.S. Navy had checked the Japanese military advance in the Pacific to the extent that the United States could return to its original "Defeat Germany First" strategy. That the Navy was able to accomplish this feat with only six fleet aircraft carriers and little more than 1,000 combat aircraft was not sheer luck but the culmination of more than two decades of determined preparation. This thorough study, with detailed drawings and photographs, explains and illustrates the trial and error process which went into developing the aircraft, airships and ships of the interwar period. The critical factors that shaped Naval Aviation after World War I—naval treaties, fleet tactics, government programs, leadership and organization, as well as the emergence of Marine Corps and Coast Guard aviation—are discussed in depth.

American Flying Boats and Amphibious Aircraft E.R. Johnson, 2016-03-29 This work is a comprehensive, heavily illustrated history of the many flying boats and amphibious aircraft designed and built in the United States. It is divided into three chronological sections: the early era (1912-1928), the golden era (1928-1945), and the post-war era (1945-present), with historical overviews of each period. Within each section, individual aircraft types are listed in alphabetical order by manufacturer or builder, with historical background, technical specifications, drawings, and one or more photographs. Appendices cover lesser known flying boat and amphibian types as well as various design concepts that never achieved the flying stage.

Electric Airplanes and Drones Kevin Desmond, 2018-09-14 Attempts at electric powered flight date to well before the 19th century. Battery weight and low energy output made it impractical until the 1990s, when the advent of lightweight materials, more efficient solar power, improved engines and the Li-Po (lithium polymer) battery opened the skies to a wide variety of electric aircraft. The author describes the diverse designs of modern electric flying machines—from tiny insect-styled drones to stratospheric airships—and explores developing trends, including flying cars and passenger airliners.

The Aviation Pocket Book Richard Borlase Matthews, 1913

Introduction to UAV Systems Paul Fahlstrom, Thomas Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. *Introduction to UAV Systems*, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. *Introduction to UAV Systems*, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Faster Than The Sun Peter Twiss,2008-09-22 The autobiography of the Fairey Aviation test pilot and Naval fighter pilot who broke the World Air Speed Record in 1956. This autobiography of Peter Twiss, the man who flew 1000mph for the first time in history, tells the story of the record-breaking Fairey Delta. It describes the vast organization necessary for the record bid, the political lobbying, and the almost intolerable tension when the flights failed. Faster Than the Sun is also a compelling account of Twiss's wartime experiences as a Fleet Air Arm pilot who saw action in Fulmars over the convoys to Malta, in Seafires during the Operation Torch landings in Africa, and as a night fighter flying Mosquitoes. It is an epic account of daring, determination, and dedication—straight from the cockpit.

Pilot's Flying Log Robert Stanford-Tuck,1996-04-01 Wing Commander Robert Stanford Tuck was one of the RAF's top-scoring aces until he was shot down and taken prisoner in January 1942, thus curtailing his probability of being the top-scorer.

Those Fabulous Flying Years Colin Cruddas,2003 En bog som primært beskæftiger sig med Sir Alan Cobham, som i begyndelsen af 1930'erne arrangerede propaganda kampagner for flyvning, flyudstillinger og opvisninger i England såvel som Sydafrika.
