British Fighter Aircraft in World War I Mark C. Wilkins, 2021-05-26 Go buy this book right now. It is rare that ISD gives an instant five-star rating to any new volume, but Mark C. Wilkins' *British Fighter Aircraft in World War I* is a rare book. — Indy Squadron

Dispatch World War I witnessed unprecedented growth and innovation in aircraft design, construction, and as the war progressed—mass production. Each country generated its own innovations sometimes in surprising ways—Albatros Fokker, Pfalz, and Junkers in Germany and Nieuport, Spad, Sopwith and Bristol in France and Britain. This book focuses on the British approach to fighter design, construction, and mass production. Initially the French led the way in Allied fighter development with their Bleriot trainers then nimble Nieuport Scouts—culminating with the powerful, fast gun platforms as exemplified by the Spads. The Spads had a major drawback however, in that they were difficult and counter-intuitive to fix in the field. The British developed fighters in a very different way; Tommy Sopwith had a distinctive approach to fighter design that relied on lightly loaded wings and simple functional box-girder fuselages. His Camel was revolutionary as it combined all the weight well forward; enabling the Camel to turn very quickly—but also making it an unforgiving fighter for the inexperienced. The Royal Aircraft Factory's SE5a represented another leap forward with its comfortable cockpit, modern instrumentation, and inline engine—clearly influenced by both Spads and German aircraft. Each manufacturer and design team vied for the upper hand and deftly and quickly appropriated good ideas from other companies—be they friend or foe. Developments in tactics and deployment also influenced design—from the early

reconnaissance planes, to turn fighters, finally planes that relied upon formation tactics, speed, and firepower. Advances were so great that the postwar industry seemed bland by comparison.

Spad Fighters Mark C. Wilkins, 2019-06-28 This book presents the evolution of one of the most famous French-made fighter aircraft of WWI--the fast, rugged Spad. From humble beginnings this airplane became the mount for such famous WWI aces as Frenchmen Georges Guynemer and René Fonck, American Eddie Rickenbacker, Italian Francesco Baracca, and many others. Illustrated with rare WWI-era photographs, this book examines how the Spad was conceived, built, and flown. Examples of surviving Spad aircraft are highlighted, as well as where they may be seen today all over the world. The book also profiles several still-existing aerodromes in the US where visitors can see a Spad being built, such as the Golden Age Air Museum in Pennsylvania. Or pay a visit to the Old Rhinebeck Aerodrome in New York and see the only flying Spad VII replica in the world! Part of the Legends of Warfare series.

WW1 Aircraft Performance Anders F. Jonsson, 2023 This is the first book to comprehensively cover WW1 fighter aircraft focusing on their relative flight performance utilizing modern computer simulations and if you want to get a better understanding of how they compared to each other, then this is the book for you. Based on the simulation results, a number of myths surrounding the modeled aircraft can be put to rest and in addition, they reveal some unexpected results that go against the grain of what has become generally accepted facts about these airplanes. While anecdotal evidence runs the risk of misremembering and embellishments, hard numbers based on computer

simulations are more neutral and allow a more complete picture of these aircraft to emerge revealing their true strengths and weaknesses. Another first is the detailed analysis of how the aircraft compare in terms of acceleration, dive, and sustained and instantaneous turn performance done to a level previously not attempted in a book. The aircraft covered in this book are the Albatros D.Va, Fokker Dr.I, Fokker D.VIIF, Fokker E.V, Fokker D.VIII, Nieuport 28.C1, Pfalz D.III, Pfalz D.IIIa, Pfalz D.VIII, Siemens Schukert D.IV, Sopwith Camel, Sopwith Triplane, S.E.5a and SPAD XIII. As a background to the analysis of the results and the rationale for how the aircraft were modeled, the book also contains a brief summary of the state of the art in aerodynamics and aircraft design at the time. Combat Squadrons of the Air Force; World War II. Maurer Maurer, 1969 This collection of squadron histories has been prepared by the USAF Historical Division to complement the Division's book, Air Force Combat Units of World War II. The 1,226 units covered by this volume are the combat (tactical) squadrons that were active between 7 December 1941 and 2 September 1945. Each squadron is traced from its beginning through 5 March 1963, the fiftieth anniversary of the organization of the 1st Aero (later Bombardment) Squadron, the first Army unit to be equipped with aircraft for tactical operations. For each squadron there is a statement of the official lineage and data on the unit's assignments, stations, aircraft and missiles, operations, service streamers, campaign

participation, decorations, and emblem.

SPAD XIII vs Fokker D VII Jon Guttman, 2009-04-21 Having established its SPAD VII as the most effective French fighter of 1916, the Société Pour l'Aviation et ses Dérivés strove to improve the model with a 220hp Hispano Suiza 8B engine and two machine guns. Despite initial teething troubles with the new engine, by mid-1918 the SPAD XIII had taken its place as the principal fighter of both France and the US. Meanwhile, the German quest for a successor for their structurally flawed Albatros D V finally bore fruit with the Fokker D VII. Entering combat in May 1918, this plane earned a reputation as the most formidable fighter of the war, yet the SPAD XIII's greater speed, especially in a dive, and its outstanding durability, proved a fearsome rival. This is the gripping story of two of the best fighters produced in World War I - the SPAD XIII and the Fokker D VII - as they dueled in the skies above the trenches in the closing months of the war. Never before published artwork, including fascinating cockpit illustrations, reveal several dramatic clashes between the two foes while diary entries and first-hand accounts from the pilots bring this classic World War I duel to life with intimate detail.

Aces of Jagdgeschwader Nr III Greg VanWyngarden, 2016-01-20 Royal Prussian Jagdgeschwader Nr III was the third of Germany's vaunted fighter wings to be formed during World War I. Commanded by the Pour le Mérite winner and well-respected ace Hauptmann Bruno Loerzer for its entire existence, it was composed of the celebrated Jasta

'Boelcke', along with Jagdstaffeln 26, 27 and 36. Equipped largely with the new Fokker triplane, these four units would play an important role in the Kaiserschlacht as part of the 17. Armee. As Germany's fortunes waned in the summer of 1918, the aces of JG III nonetheless did their best to stem the tides of British, French and later American aircraft they encountered. Aces such as Carl Bolle, Paul Bäumer, Heinrich Bongartz, Hermann Frommherz, Rudolf Klimke and the infamous Hermann Göring all carved their names in the record books flying in this formidable formation. This book examines the tactics, achievements and personalities of one of the deadliest of Germany's aerial units.

German Fighter Aircraft in World War I Mark C. Wilkins, 2019-11-19 This fully illustrated volume explores German military aviation during WWI through archival photographs and authentically detailed replicas. Fighter aircraft were developed during World War I at an unprecedented rate, as nascent air forces sought to achieve and maintain air supremacy. German manufacturers innovated at top speed, while constantly scrutinizing the development of new enemy aircraft. The Germans also utilized the concept of modular engineering, which allowed them to disassemble or reassemble their aircraft quickly in the field. The pinnacle of their aeronautical innovations was the iconic Fokker D VII—the only aircraft specifically mentioned in the Treaty of Versailles, which forbade Germany from building it after the war. *German Fighter Aircraft in World War I* explores how German fighter aircraft were developed during the war, the advancements and trials that made the Fokker D VII possible, and the different makes and types of aircraft. Using unpublished images including photographs of surviving aircraft, archive images, and models and replicas, this volume shows details of aircraft that were

kept top secret during the war. Extensively illustrated with 140 photos and ten color profiles, this is will be essential reading for all WWI aviation enthusiasts and modelers.

United States Army in the World War, 1917-1919: Military operations of the American Expeditionary Forces, 1990 A seventeen-volume compilation of selected AEF records gathered by Army historians during the interwar years. This collection in no way represents an exhaustive record of the Army's months in France, but it is certainly worthy of serious consideration and thoughtful review by students of military history and strategy and will serve as a useful jumping off point for any earnest scholarship on the war. --from Foreword by William A Stofft.

Carl A. Spaatz and the Air War in Europe Richard G. Davis, 1993 This is the first detailed examination of the career of the highest-ranking U.S. Army Air Forces officer in Europe during World War II.

St. Mihiel 12-16 September 1918 Donald A. Carter, 2018 The St. Mihiel salient, created during the initial German invasion in 1914, had withstood multiple French efforts to regain the territory. Yet even though the Germans had established strong defensive positions around St. Mihiel and its neighboring villages and towns, the salient was highly vulnerable to attack and was an optimal target for a potential American operation. Until this point in the war, members of the American Expeditionary Forces had not fought in a formation larger than a corps, and then only under French or British leadership. Now, as part of the American First Army under General John J. Pershing, they prepared to launch an offensive that would demonstrate to the Allies and the Germans alike that the Americans were capable of operating as an independent command. The AEF's successful

efforts in the St. Mihiel Offensive, and the hard-won operational and tactical lessons that it learned during the battle, helped set the stage for the grand Allied offensive that would seize the initiative on the Western Front and blaze a path toward ultimate victory in the war.

The Red Knight of Germany Floyd Gibbons,1927

The Cutting Edge Mark A. Lorell,Hugh P. Levaux,United States. Air Force,Project Air Force (U.S.),1998 The proposition that innovation is critical in the cost-effective design

and development of successful military aircraft is still subject to some debate. RAND research indicates that innovation is promoted by intense competition among three or more industry competitors. Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry, the authors here examine the history of the major prime contractors in developing jet fighters since World War II. They make use of an extensive RAND database that includes nearly all jet fighters, fighter-attack aircraft, and bombers developed and flown by U.S. industry since 1945, as well as all related prototypes, modifications, upgrades, etc. The report concludes that (1) experience matters, because of the tendency to specialize and thus to develop system-specific expertise; (2) yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders; and (3) dedicated military R&D conducted or directly funded by the U.S. government has been critical in the development of new higher-performance fighters and bombers.
