Energiya-Buran Bart Hendrickx, Bert Vis, 2007-12-05 This absorbing book describes the long development of the Soviet space shuttle system, its infrastructure and the space agency's plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA's Shuttle fleet.

Rockets and People Volume I (NASA History Series. NASA Sp-2005-4110) Boris Chertok, 2005-01-01 Much has been written in the West on the history of the Soviet space program, but few Westerners have read direct first-hand accounts of the men and women who were behind the many Russian accomplishments in exploring space. The memoir of academician Boris Chertok, translated from the original Russian, fills that gap. Chertok began his career as an electrician in 1930 at an aviation factory near Moscow. Thirty years later, he was deputy to the founding figure of the Soviet space program, the mysterious Chief Designer Sergey Korolev. Chertok's 60-year-long career and the many successes and failures of the Soviet space program constitute the core of his memoirs, *Rockets and People*. In these writings, spread over four volumes (volumes two through four are forthcoming), academician Chertok not only describes and remembers, but also elicits and extracts profound insights from an epic story about a society's quest to explore the cosmos. This book was edited by Asif Siddiqi, a historian of Russian space exploration, and General Tom Stafford contributed a foreword touching upon his significant work with the Russians on the Apollo-Soyuz Test Project. Overall, this book is an engaging read while also contributing much new material to the literature about the Soviet space program.

The Messerschmitt Me 163 Komet Marek Ryś, 2021-09-30

Although the German Me 163 Komet rocket fighter was created as a remedy for the mass air raids of the Allied air force on Germany, its origins date back to 1938. Alexander Lippisch then began work at the DFS factory on a tailless rocket-propelled aircraft, designated as DFS 194. At the beginnings of 1939, the project was handed over to the Messerschmitt factory and there it developed into the Me 163A. Two prototypes of this aircraft - V4 and V5 - were completed in 1941 and flown as gliders. Then the V4 received a Walter HWK R.II rocket engine with a thrust of 7.5 kN, and on October 2, 1941 H. Dittmar achieved a speed of 1003 km/h on mentioned plane. Thirteen Me 163As were built for training.

Soviet Secret Projects Tony Buttler, Yefim Gordon, 2005 This is the latest among Midland's very successful 'Secret Projects' series. This, the second of three volumes covering Soviet secret aviation projects, is devoted to post-World War II fighters and will include designs from famous bureaus such as Lavochkin, Mikoyan, Sukhoi, Yakovlev, Myasishchev, and Tupolev. The book covers early post-war fighters, competitions for the first-generation supersonic designs (MiG-21 and Su-7/-9), advanced designs of the 1960s which led to the MiG-2 and competitions to build the specifications which resulted in the MiG-29, Su-27, and MiG I-44. A number of previously unpublished Yakovlev designs from the late 1950s and early 1960s form a separate chapter, followed by another covering Yakovlev's VSTOL work. The book also describes the competition between design bureaus for orders and shows the progress made in aircraft design behind the Iron Curtain. It will give both experts and enthusiasts the chance to compare this work to Western aircraft programs of the era.

Introduction to UAV Systems Paul G. Fahlstrom, Thomas J. Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving

efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

The Complete Book of Spaceflight David Darling, 2008-04-21
A commanding encyclopedia of the history and principles of spaceflight-from earliest conceptions to faster-than-light galaxy-hopping Here is the first truly comprehensive guide to space exploration and propulsion, from the first musings of the Greeks to current scientific speculation about interstellar travel using warp drives and wormholes. Space buffs will delight in its in-depth coverage of all key manned and unmanned missions and space vehicles-past, present, and projected-and its clear

explanations of the technologies involved. Over the course of more than 2,000 extensively cross-referenced entries, astronomer David Darling also provides fascinating insights into the cultural development of spaceflight. In vivid accounts of the major characters and historical events involved, he provides fascinating tales of early innovators, the cross-pollination that has long existed between science fiction and science fact, and the sometimes obscure links between geopolitics, warfare, and advances in rocketry.

Challenge to Apollo Asif A. Siddiqi, NASA History Office, 2011-03-01 Taking advantage of the Soviet archives, which were opened in the 1990s, Siddiqi has written a groundbreaking work that examines why the Soviet Union fell behind in the space race of the 1960s after changing the course of human history with the first artificial satellite launch, Sputnik, in 1957.

Rocket Fighter Herman Eugen Ziegler, Mano Ziegler, Alexander Vanags, 1976 En beretning om det første bemandede raketfly, dets konstruktør og piloterne, der gennemførte prøveflyvningerne.

Hitler's Revolution Richard Tedor, 2017-05-08 Drawing on over 200 German sources, Hitler's Revolution provides insight into the National Socialist ideology and how it changed Germany. The government's success at relieving unemployment and programs to eliminate class barriers unlock the secret to Hitler's undeniable popularity which, in light of war crimes, seems so incomprehensible today.

Gotterdammerung - Luftwaffe Wrecks and Relics Brett Green, 2006 Many of the photographs in this book were taken by advancing Allied troops in North Africa and Europe from 1942 onwards, others show aircraft shot down over England or come from Germany after the collapse of the Third Reich. They therefore form a valuable repository of information on aircraft, often from lesser-known units, at various stages of the War.

Flying Wings and Tailless Aircraft Bill Rose, 2010 This is an

exciting new addition to the highly successful Secret Projects series, which examines some extraordinary flying wings and tailless aircraft projects. Designed and developed since the dawn of aviation, these aircraft still hold a great importance today, with many aviation enthusiasts eager to learn more about these remarkable aircraft, which provided the foundations for the modern aviation scene. Beginning with an analysis of the advantages of the flying wing, the author looks at why aerodynamicists have been attracted to this unique configuration since the earliest days of manned flight, highlighting a range of specific aircraft and relevant examples. Many aviation enthusiasts will delight in discovering the more intimate developmental details of familiar aircraft including the famous early glider Junkers and other World War 1 flying wing biplane designs.

History of the German General Staff, 1657-1945 Walter Goerlitz, 2013-10 This is a new release of the original 1956 edition.

Nachtjagd Theo Boiten, 1997 *Nachtjagd* Boiten Subtitled: The Night Fighter Versus Bomber War Over the Third Reich 1939-45. Of the 7,953 Bomber Command aircraft lost on night operations during WWII, an estimated 5,833 fell victim to Luftwaffe night fighters. This volume traces the parallel developments in RAF night bombing and the Luftwaffe's night fighting capability using archive material and interviews with surviving aircrew from both sides. Hdbd., 7 3/4 x 1, 24 pgs., 17 bandw ill.

The Vulcan Story Peter R. March, 2006 Describes the design, development, and operation of the Vulcan jet bomber.

Wingless Flight R. Dale Reed, Darlene Lister, 2021-10-21 Most lifting bodies, or flying bathtubs as they were called, were so ugly only an engineer could love them, and yet, what an elegant way to keep wings from burning off in supersonic flight between earth and orbit. Working in their spare time (because they couldn't initially get official permission), Dale Reed and his team of engineers demonstrated the potential of the design that

led to the Space Shuttle. Wingless Flight takes us behind the scenes with just the right blend of technical information and fascinating detail (the crash of M2-F2 found new life as the opening credit for TV's The Six Million Dollar Man). The flying bathtub, itself, is finding new life as the proposed escape-pod for the Space Station.

International Relations since 1945 Geir

Lundestad, 2017-06-19 Introducing the key events and developments in international relations, this authoritative and engaging book provides students with a clear understanding of the contemporary issues in international politics. Putting the foundations and contexts of International Relations at your fingertips, this Eighth Edition: Provides an account of the world as it has evolved up to 1945 Extended coverage of topics including population, gender and the environment Includes expanded material on the theory of international relations Includes new learning resources, including an 'alternative perspectives' box in each chapter Supports research with fully updated and annotated further reading lists Praised for its detail and tone, International Relations since 1945 is ideal for providing undergraduates with a historical background as they approach international relations.

Smithsonian National Air and Space Museum Michael J.

Neufeld, Alex M. Spencer, 2010 This Autobiography headlines the collections, both on view and behind the scenes, of the Smithsonian National Air and Space Museum. The official story and insiders' tales of the museum are shared by its curators, the people who know it best. Photography and backstage glimpses show off the collection, including well-known artifacts like Lindbergh's Spirit of St. Louis and the Apollo 11 command module, as well as rare treasures not displayed to the public. -- from publisher description.

SpaceShipOne Dan Linehan, 2011-06-13 "One of the most remarkable accomplishments in our conquest of gravity." — Sir

Arthur C. Clarke In April, 2003, a company called Scaled Composites introduced SpaceShipOne to the world. SpaceShipOne: An Illustrated History chronicles the development of the world's first commercial manned space program—a program that includes an airborne launcher (the White Knight), a space ship (SpaceShipOne), rocket propulsion, avionics, simulator, and full ground support. With ample illustrations, photographs, and behind-the-scenes information, SpaceShipOne provides a full picture of this classified project. The story of SpaceShipOne combines the adventurous spirit of Charles Lindbergh, the entrepreneurial drive of Howard Hughes, and the urgency of the space race at the height of the Cold War.

Early Soviet Jet Fighters E. Gordon, Yefim Gordon, 2002 This charts the development and service history of the first-generation Soviet jet fighters designed by such renowned fighter makers as Mikoyan, Yakovlev and Sukhoi, as well as design bureau no longer in existence--the Lavochkin and Alekseyev OKBs, during the 1940s and early 1950s. Each type is detailed and compared to other contemporary jet fighters. As ever the extensive photo coverage includes much which is previously unseen.
