*Brewster F2a Buffalo* Maciej Noszczak, 2018-04-19

The first batch of the F2A-1 Buffalos picked by US Navy from the Brewster factory between May and December 1939 were powered by Wright 1820-34 Cyclone engine. Moreover they differed from the XF2A-1 prototype in enlarged canopies. F2A-1s were equipped with telescope sights. Antenna masts were moved from left to right side of upper fuselage in front of the cockpit. The landing light was relocated from the bottom left engine cowling to the left wing underside. Wing tips were shortened. Lower part of the leading edge of vertical stabilizer received a profile reaching further on, up to the back frame of the cockpit. The F2A-2 received a new engine: Wright R-1820-40, which extended the weight of the front part of the plane. To keep the centre of gravity unchanged, the nose part was shortened by 12 cm. Bigger engine demanded enlarging and redesigning the cowling. The Hamilton Standard propeller was replaced by Curtiss Electric model. The exhausts were moved from the lower part of engine masks to the wing level. The armament was unified and consisted of four .50 cal Browning M2 machine guns. There were also 50 kg bomb racks installed. The Model 339B ordered by Belgium had the catapult mountings removed, as well as arresting hook, radio and antennas. It was powered by Wright R-1820-G105 engine. The removal of the hook caused the necessity of modifying the tail cone. Its new shape lengthened the plane slightly. The F2A-3 - last serial version of Buffalo - had another modification in the nose area. It had the same engine as its predecessor and propeller without the nose-cap. Nose of the fighter was lengthened

by 25 cm. It also received a new fuel tank which enlarged their overall capacity up to 1100 liters

Brewster Buffalo Nico Braas, 2017 One of the lesser known fighter aircraft of World War 2 was the Brewster Buffalo, or, using the U.S. Navy designation system, the F2A. By some historians the Buffalo is regarded as an outright failure but this is a rating this stubby little fighter definitely did not deserve. Bron: Flaptekst, uitgeversinformatie.

Vakoch, 2015-03-24 Addressing a field that has been dominated by astronomers, physicists, engineers, and computer scientists, the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

**Data and Goliath: The Hidden Battles to Collect Your Data and Control Your World** Bruce

Schneier,2015-03-02 "Bruce Schneier's amazing book is the best overview of privacy and security ever written."—Clay Shirky "Bruce Schneier's amazing

book is the best overview of privacy and security ever written.”—Clay Shirky Your cell phone provider tracks your location and knows who’s with you. Your online and in-store purchasing patterns are recorded, and reveal if you’re unemployed, sick, or pregnant. Your e-mails and texts expose your intimate and casual friends. Google knows what you’re thinking because it saves your private searches. Facebook can determine your sexual orientation without you ever mentioning it. The powers that surveil us do more than simply store this information. Corporations use surveillance to manipulate not only the news articles and advertisements we each see, but also the prices we’re offered. Governments use surveillance to discriminate, censor, chill free speech, and put people in danger worldwide. And both sides share this information with each other or, even worse, lose it to cybercriminals in huge data breaches. Much of this is voluntary: we cooperate with corporate surveillance because it promises us convenience, and we submit to government surveillance because it promises us protection. The result is a mass surveillance society of our own making. But have we given up more than we’ve gained? In *Data and Goliath*, security expert Bruce Schneier offers another path, one that values both security and privacy. He brings his bestseller up-to-date with a new preface covering the latest developments, and then shows us exactly what we can do to reform government surveillance programs, shake up surveillance-based business models, and protect our individual privacy. You’ll never look at your phone, your computer, your credit cards,

or even your car in the same way again.

Colour-Coded Constance Backhouse, 1999-11-20  
Historically Canadians have considered themselves to be more or less free of racial prejudice. Although this conception has been challenged in recent years, it has not been completely dispelled. In Colour-Coded, Constance Backhouse illustrates the tenacious hold that white supremacy had on our legal system in the first half of this century, and underscores the damaging legacy of inequality that continues today. Backhouse presents detailed narratives of six court cases, each giving evidence of blatant racism created and enforced through law. The cases focus on Aboriginal, Inuit, Chinese-Canadian, and African-Canadian individuals, taking us from the criminal prosecution of traditional Aboriginal dance to the trial of members of the 'Ku Klux Klan of Canada.' From thousands of possibilities, Backhouse has selected studies that constitute central moments in the legal history of race in Canada. Her selection also considers a wide range of legal forums, including administrative rulings by municipal councils, criminal trials before police magistrates, and criminal and civil cases heard by the highest courts in the provinces and by the Supreme Court of Canada. The extensive and detailed documentation presented here leaves no doubt that the Canadian legal system played a dominant role in creating and preserving racial discrimination. A central message of this book is that racism is deeply embedded in Canadian history despite Canada's reputation as a raceless society. Winner of the Joseph Brant Award, presented by the

Engineer in Charge James R. Hansen, 1987

*The West in Early Cinema* Nanna

Verhoeff, 2006-01-01 Verhoeff investigates the emergence of the western genre, made in the first two decades of cinema (1895-1915). By analyzing many unknown and forgotten films from international archives she traces the relationships between films about the American West, their surrounding films, and other popular media such as photography, painting, (pulp) literature, Wild West Shows and popular ethnography. Through this exploration of archival material she raises new questions of historiography and provides a model for historical analysis. These first traces of the Western film reveal a preoccupation with presence and actuality that informs us about the way in which film, as new medium, took shape within the context of its contemporary visual culture. In *The West in Early Cinema* gaat Nanna Verhoeff op zoek naar de nog onbekende beginjaren van het westerngenre tijdens de eerste twee decennia van het medium film (1895-1915). Aan de hand van onbekende en vergeten films uit internationale filmarchieven traceert zij de relaties tussen films over het Westen, omringende filmgenres uit deze periode, en andere

populaire media als fotografie, schilderkunst, (pulp)literatuur, Wild West Shows en populaire etnografie. Deze sporen van het genre tonen een grote actualiteit en variatie, die laat zien op welke manier de film als nieuw medium een vorm vond binnen de toenmalige visuele cultuur.
