The Reich Wreckers: An Analysis Of The 306th Bomb Group During World War II Major Charles J. Westgate III,2015-11-06 This paper presents an analysis of the 306th Bomb Group's contributions during World War II. Rather than providing a simple recounting of the various dates and accomplishments, the paper analyzes some of the key indicators and statistics of the group's performance. In particular, the paper focuses on comparing aircraft losses and bombing results of the 306th with the Eighth Air Force's. The analysis also examined other areas, such as: mission aborts, enemy aircraft claimed destroyed, weather conditions over target, bombing methods used, presence of fighter escorts, and strength of enemy air defenses (enemy fighter aircraft and flak). The purpose of the analysis was to gain a better understanding of the group's overall performance within the bigger scope of the Eighth Air Force's war effort. The analysis was conducted in three steps. First, the archives of the Air Force Historical Research Agency (AFHRA) were searched for statistics on the 306th. Next, similar statistics were collected for the Eighth Air Force. Finally, the data for the two units was analyzed and compared, to aid in determining conclusions. To facilitate the last step of the research, the air war was divided into four periods. The goals and objectives for each period were used as criteria to grade the unit's effectiveness. In general, the study concluded that the 306th Bomb Group was a "typical" B-17 bomber group in World War II. When comparing the various statistics and graphs provide in this paper, we see that in most cases there was little difference in the data for the 306th and the Eighth Air Force. However, the statistics do not tell the whole story. As one of the cadre groups of the Eighth Air Force, many of the improvements and lessons learned during the early period of the war were at the expense of the 306th. These early lessons and experiments were important and led to the improvements that saved many lives and brought an end to the war.

Douglas A-26 Invader Bomber Pilot's Flight Manual Periscope Film.com,2006-05 One of the only aircraft to fly and fight in three wars ' World War II, Korea and Vietnam ' the Douglas A-26 Invader earned a reputation for its durability under fire. First flown in 1942, the Invader (known after 1948 as the B-26) featured a single pilot, with a navigator / bombardier sitting in the co-pilot's position. Many B-26's served as transport and fire-fighting aircraft after their combat service. The Cutting Edge Mark A. Lorell,Hugh P. Levaux,United States. Air Force,Project Air Force (U.S.),1998 The proposition that innovation is critical in the cost-effective design and development of successful military aircraft is still subject to some debate. RAND research indicates that innovation is promoted by intense competition among three or more industry competitors. Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry, the authors here examine the history of the major prime contractors in developing jet fighters since World War II. They make use of an extensive RAND database that includes nearly all jet fighters, fighter-attack aircraft, and bombers developed and flown by U.S. industry since 1945, as well as all related prototypes, modifications, upgrades, etc. The report concludes that (1) experience matters, because of the tendency to specialize and thus to develop system-specific expertise; (2) yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders; and (3) dedicated military R&D conducted or directly funded by the U.S. government has been critical in the development of new higher-performance fighters and bombers.

The Smell of Kerosene National Aeronautics and Space Administration,Donald L. Mallick,Peter W. Merlin,2022-11-13 This book puts the reader in the pilot's seat for a day at the office unlike any other. The Smell of Kerosene tells the dramatic story of a NASA research pilot who logged over 11,000 flight hours in more than 125 types of aircraft. Donald Mallick gives the reader fascinating first-hand description of his early naval flight training, carrier operations, and his research flying career with NASA. After transferring to the NASA Flight Research Center, Mallick became involved with projects that further pushed the boundaries of aerospace technology. These included the giant delta-winged XB-70 supersonic airplane, the wingless M2-F1 lifting body vehicle, and triple-sonic YF-12 Blackbird. Mallick also test flew the Lunar Landing Research Vehicle and helped develop techniques used in training astronauts to land on the Moon.

Visual Aircraft Recognition U. S. Army,2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

Taking Flight National Research Council,Division of Behavioral and Social Sciences and Education,Commission on Behavioral and Social Sciences and Education,Committee on Education and Training for Civilian Aviation Careers,1997-03-14 The commercial aviation industry is a major part of the U.S. transportation infrastructure and a key contributor to the nation's economy. The industry is facing the effects of a reduced role by

the military as a source of high-quality trained personnel, particularly pilots and mechanics. At the same time, it is facing the challenges of a changing American workforce. This book is a study of the civilian training and education programs needed to satisfy the work-force requirements of the commercial aviation industry in the year 2000 and beyond, with particular emphasis on issues related to access to aviation careers by women and minorities.

Bomber R & D Since 1945 Mark A. Lorell,Alison Saunders,Hugh P. Levaux,1995 The authors conclude that relevant experience does, indeed, matter--firms develop valuable system-specific knowledge in ongoing work, and experience in important new technologies has a distinct advantage.

The historical significance of the Full-Scale Tunnel was formally recognized when it was designated a National Historic Landmark in 1985 by the National Park Service.
