Tiger I Dennis Oliver,2018-04-30 A fully illustrated guide to the German Tiger I tank and its operations in the field by the renowned expert on WWII armored vehicles. At Hitler's insistence, the first Tiger I tanks drove into action in Tunisia in December 1942. Despite their lack of reliability and the small number deployed, they quickly gained a fierce reputation. With its heavy armor and 88mm gun, the Tiger I outclassed all the Allied tanks then in service. Beyond their deployment in North Africa, they also operated in Sicily and Italy between 1943 and 1945. In his second volume in the TankCraft series on the Tiger, Dennis Oliver uses archive photos and extensively researched color illustrations to examine the Tiger tank and the German army units that first took them into combat. Perfect for model enthusiasts, Tiger I showcases available model kits and aftermarket products. It also includes a gallery of beautifully constructed and painted models in various scales. Technical details, as well as modifications introduced during production and in the field, are also examined providing everything the modeler needs to recreate an accurate representation of the tanks.

Tiger I, German Army Heavy Tank Dennis Oliver,2021-12-30 This illustrated guide examines the famous WWII German tank and its operations in the Eastern Front, with extensive resources for modeling enthusiasts. The Tiger I tank might have been a break-through—and even war-winning—weapon if Germany had produced it in sufficient numbers and introduced it earlier on the Eastern Front. Instead, the Tiger played a mainly defensive role as the Wehrmacht struggled to withstand the advances of the Red Army. In his third book on the Tiger in the TankCraft series, Dennis Oliver focuses on this fascinating period in the tank's short history. Oliver uses archive photos and extensively researched color illustrations to examine the tanks and units of the German army's heavy panzer battalions. A large part of the book showcases available model kits and aftermarket products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined providing everything the modeler needs to recreate an accurate representation of the Tigers of 1943.

Tiger I: German Army Heavy Tank Dennis Oliver,2019-10-30 The Tiger I tank, probably the most famous German armoured vehicle of the Second World War, might have been a war-winning, break-through weapon if it had been produced in sufficient numbers and if it had been introduced earlier on the Eastern Front, before the balance of strength had tipped towards the Soviet Union. At the Battle of Kursk there were not enough Tigers to make a decisive difference and thereafter the Tiger was forced to play a mainly defensive role as the Wehrmacht struggled to withstand the advances of the Red Army. And it is this period in the Tiger tank's short history that Dennis Oliver concentrates on in this, his third book on the Tiger in the TankCraft series. He uses archive photos and extensively researched colour illustrations to examine the tanks and units of the German army's heavy panzer battalions. A large part of the book showcases available model kits and aftermarket products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined providing everything the modeller needs to recreate an accurate representation of the Tigers of 1943.

Pz. Kpfw IV Family Marek Jaszczolt,Jacek Pasieczny,2013-01-17 *Illustrated color reference guide to the Pz.Kpfw. VI Tiger Tiger I is the common name of a German heavy tank developed in 1942 and used in World War II. The final official German designation was Panzerkampfwagen Tiger Ausf. E, often shortened to Tiger. It was an answer to the unexpectedly formidable Soviet armor encountered in the initial months of the Axis invasion of the Soviet Union, particularly the T-34 and the KV-1. The Tiger I design gave the Wehrmacht its first tank mounting the 88 mm gun, in its initial armored fighting vehicle-dedicated version, which in its Flak version had previously demonstrated its effectiveness against both air and ground targets. During the course of the war, the Tiger I saw combat on all German battlefronts. It was usually deployed in independent tank battalions, which proved to be quite formidable. While the Tiger I was feared by many of its opponents, it was over-engineered, used expensive and labor intensive materials and production methods, and was time-consuming to produce. Only 1,347 were built between August 1942 and August 1944. The Tiger was prone to certain types of track failures and immobilizations, and limited in range by its huge fuel consumption. It was, however, generally mechanically reliable but expensive to maintain. It was also complicated to transport, and vulnerable to immobilization when mud, ice and snow froze between its overlapping and interleaved road wheels in winter weather conditions, often jamming them solid. In 1944, production was phased out in favor of the Tiger II. A big decal sheet with 1:72, 1:48 and 1:35 individual and national markings for 16 Pz.Kpfw. VI Tiger tanks. The decal sheet was printed by Cartograf. Each painting scheme is depicted on beautifully drawn color profile and described in the guidebook with English and Polish text.

Tiger I & Tiger II Tanks Dennis Oliver,2020-08-31 "Will be of great interest to modelers that plan to build a Tiger tank and to military historians alike." —AMPS Indianapolis By the first weeks of 1945, the Eastern Front had been pushed back to the Carpathian mountain passes in the south and Warsaw on the Vistula River in the center, while in the north, the German army was fighting in East Prussia. The Wehrmacht's armored and mobile formations were now employed exclusively as fire brigades, rushed from one crisis to the next as the Red Army pushed inexorably westward. Critical to the German defense were the army's heavy Panzer battalions, whose Tiger tanks, with their 8.8 cm guns, were almost invincible on the open plains of central Europe. In his latest book in the TankCraft series, Dennis Oliver uses archive photos and extensively researched color illustrations to examine the Tiger tanks and units of the German Army and Waffen-SS heavy Panzer battalions that struggled to resist the onslaught of Soviet armor during the last days of the conflict that culminated in the battle for Berlin. A key section of this book displays available model kits and aftermarket products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined, providing everything the modeler needs to create an accurate representation of these historic tanks.

Panzerkampfwagen VI Tiger Slawomir Zajaczkowski,2019-09-19 The German heavy tank Panzerkampfwagen VI Tiger is a vehicle known even to laymen. It was heavily armored and armed with a deadly 88 mm gun. Despite their legend, the Tigers were plagued by several technical problems, especially with propulsion, which often did not allow them to fully use their combat potential. The main motivator for designing the Pz.Kpfw. VI was eager to install a Flak 36 antiaircraft gun 36 caliber 88 in the turret. It was a weapon that could destroy Soviet tanks on long distances. In addition, it was necessary to build a tank able to withstand fire from the T-34/76 guns, which effectively eliminated the German medium tanks Pz.Kpfw. III and IV. A competition for a tank that fulfills these requirements was set, and in April 1942 the prototypes of Porsche and Henschel went for the final duel. After a series of tests, the tank developed by Henschel proved to be better. It received the designation Sd.Kfz. 181 Pz.Kpfw. VI Tiger Ausf. H1 and went into production at the plants in Kassel-Mittelfeld and Wegmann AG. The tank was plagued by many teething problems, and as a result, many subsequent construction changes were introduced in the course of production. Considering the periods of their implementation, it is possible to extract Tigers of early production series, vehicles after modification and vehicles of late production series.

Germany's Tiger Tanks Thomas L. Jentz,Hilary L. Doyle,1997 This new volume covers development from the VK 45.02(P), VK 45.03(H) to the modifications under design for the Tiger II at the end of the war. All of this illustrated with scale drawings by Hilary L. Doyle combined with drawings, sketches, and photographs depicting external modifications is well as internal views. Over twenty years of intensive research went into finding the original documents needed to create this new history on the development, characteristics, and tactical capabilities of the Tiger series. Tom Jentz has conducted an exhaustive search for surviving records of the design/assembly firms (including Henschel, Krupp, Nibelungenwerk, Porsche, and Wegmann), the Heeres-Waffenamt, the D656 series of manuals on the Tiger, and the war diaries and operations reports from the German units. The written records were supplemented by examining thousands of photos. On-sight research into almost all the surviving Tigers provided details that could only be obtained from actual specimens. New information was found on the evolution of the heavy tank series, the key decisions on the design of the Tigers, the significant modifications made during the production runs, production statistics, the Tigers characteristics and tactical capabilities, an exact accounting of the issue of the Tigers to the combat units, and combat account written directly after the actions. Tom Jentz is also the author of Germany's Tiger Tanks: Tiger I & II – Combat Tactics; Germany's Panther Tank: The Quest for Combat Supremacy; Panzertruppen 1933–1942; and Panzertruppen 1943–1945 (all four titles are available from Schiffer Publishing Ltd.).

Swinging The Sledgehammer: The Combat Effectiveness Of German Heavy Tank Battalions In World War II Major Christopher W. Wilbeck,2014–08–15 This thesis is a historical analysis of the combat effectiveness of the German schwere Panzer-Abteilung or Heavy Tank Battalions during World War II. During the course of World War II, the German Army developed heavy tank battalions to fulfill the concept of breaking through enemy defenses so faster, lighter mechanized forces could exploit the rupture. These heavy tank battalions had several different tables of organization, but were always centered around either the Tiger or the Tiger II tank. They fought in virtually every theater of Europe against every enemy of Germany. Ultimately, the German military created eleven Army and three Waffen-SS heavy tank battalions. Of the Army battalions, the German command fielded ten as independent battalions, which were allocated to Army Groups as needed. The German Army assigned the last heavy tank battalion as an organic unit of the elite Panzer Grenadier Division Grossdeutschland. The Waffen-SS allocated all of their battalions to a different Waffen-SS Corps. Because these units were not fielded until late in 1942, they did not participate in Germany's major offensive operations that dominated the early part of World War II. Germany's strategic situation after mid-1943 forced their military onto the defensive. Consequently, there are very few instances when heavy tank battalions attacked as a breakthrough force. During the latter part of the war, they were used in many different ways to provide defensive assistance along very wide frontages. This study assesses the German heavy tank battalions as generally effective, primarily because of the high kill ratio they achieved. However, based upon observations from a wide variety of examples, this study also outlines several areas where changes may have increased their effectiveness.

Air Power at the Battlefront Dr Ian Gooderson,2013–05–13 Ian Gooderson presents a study of close air support in World War II, with the analysis focusing on the use of tactical air power by British and American forces during the campaigns in Italy and northwestern Europe between 1943 and 1945.

Tiger Tanks at War Michael Green,James D. Brown,2008–02–15 The first prototype for the Tiger tank was set to be ready for Hitler's birthday on April 20, 1942. The Henschel Company, competing with Porsche, produced the superior model, and by August of that year the formidable Tiger--or Panzerkampfwagen VI Tiger Ausf. H.--was in full production. This book takes us behind the scenes with the Tiger tank, reviewing the full history, the design and mechanics, and the mixed record of this machine, which was designed to outgun its Russian counterparts. Military writer Michael Green offers a close-up account--accompanied by photographs, diagrams, and maps--of how the Tiger tank operated, how it was armed, and where it succeeded brilliantly, as well as where it failed miserably. His book fills a fascinating niche in the history of military technology, and of the impact of technology on history itself.

Seek, Strike, and Destroy Christopher Richard Gabel,1986 In the seventy years that have passed since the tank first appeared, antitank combat has presented one of the greatest challenges in land warfare. Dramatic improvements in tank technology and doctrine over the years have precipitated equally innovative developments in the antitank field. One cycle in this ongoing arms race occurred during the early years of World War II when the U.S. Army sought desperately to find an antidote to the vaunted German blitzkrieg. This Leavenworth Paper analyzes the origins of the tank destroyer concept, evaluates the doctrine and equipment with which tank destroyer units fought, and assesses the effectiveness of the tank destroyer in battle.

Toward Combined Arms Warfare Jonathan Mallory House,1985

Battle for the Ruhr Derek S. Zumbro,2006 Derek Zumbro chronicles this key military campaign from a unique and fresh perspective – that of the defeated German soldiers and civilians caught in the final maelstrom of the war's western front. Zumbro chronicles the relentless assault on the Ruhr Pocket through German eyes, as the Allied juggernaut battered the region's cities, villages, and homes into submission. He tells of children pressed into service by a desperate Nazi regime – and of even more desperate parents trying to save their sons from sacrifice at the eleventh hour. He also tells of unspeakable conditions suffered by foreign laborers, POWs, and political opponents in the Ruhr Valley and of the mass graves that gave Allied soldiers a grisly new understanding of their enemy. Zumbro also recounts the story of Field Marshal Walter Model's final hours. His eventual suicide effectively ended the existence of the Wehrmacht's once-formidable Army Group B after being pursued, methodically encircled, and finally destroyed by U.S. and British forces. Through interviews with surviving members of Model's former staff, Zumbro has uncovered the attitudes of beleaguered officers that official records could never convey. Other interviews with former soldiers reveal the extent to which Allied bombing contributed to the rapid deterioration of German combat effectiveness and tell of civilians begging soldiers to abandon the war. Zumbro's research reveals the identities of specific characters discussed in previous works but never identified, describes the final hours of German officers executed for the loss of the bridge at Remagen, and offers new insight into Model's acquiescence to Hitler in military affairs.--BOOK JACKET.

The War Against Germany and Italy Kenneth E. Hunter,1951

Tiger I & Tiger II Anthony Tucker-Jones,2013–07–17 A pictorial history and analysis of the infamous World War II German tanks. The German Tiger I and Tiger II (known to the Allies as the King Tiger or Royal Tiger) were the most famous and formidable heavy tanks of the Second World War. In their day, their awesome reputation inspired such apprehension among Allied soldiers that the weaknesses of these brilliant but flawed designs tended to be overlooked. Anthony Tucker-Jones, in this illustrated history, tells the story of their conception and development and reconsiders their operational history, and he dispels the myths that have grown up around

them. The Tigers were over-engineered, required raw materials that were in short supply, and were time-consuming to manufacture and difficult to recover from the battlefield. Only around 1,300 of the Tiger I and fewer than 500 of the Tiger II were produced, so they were never going to make anything more than a local impact on the outcome of the fighting on the Western and Eastern fronts. Yet the myth of the Tigers, with their 88mm guns, thick armor, and brutal profiles, has grown over time to the extent that they are regarded as the deadliest tanks of the Second World War. Anthony Tucker-Jones’s expert account of these remarkable fighting vehicles is accompanied by a series of color plates showing the main variants of the designs and the common ancillary equipment and unit markings. His book is an essential work of reference for enthusiasts.
