Heinkel He 162 Robert Forsyth, Eddie J. Creek, 2009-05-21 If it can be said that adversity generates creativity, then the story of the Heinkel He 162 jet fighter is testimony to such a precept. From the summer of 1944, the adversity facing the leadership of the Third Reich was formidable. Ironically however, the very existence of such adversity prompted many inventive designs for the air defence of the Reich on a determined and even manic scale. The pinnacle of these accomplishments was the so-called Volksjäger (the 'People's Fighter') project which was, and still is, regarded as a 'miracle of production'. Created in desperation by the Nazi leadership in mid-1944, and powered by a BMW turbojet, the He 162 was known to its pilots as the 'Spatz' (the 'Sparrow'). It represented an unprecedented aeronautical and engineering achievement, with the aircraft going from drawing board to prototype flight in just three months, often at considerable human cost. In this book, aviation historians Robert Forsyth and Eddie J. Creek draw, for the first time, on hundreds of previously unused Heinkel company papers to offer a unique insight into the workings of the Nazi production system in the late-war period, as well as other German and Allied documents. Their work is supported by many rare photographs and accompanied by line drawings and facsimile documents as well as highly detailed colour artwork by He 162 specialist, Simon Schatz. Heinkel He 162 Spatz offers the whole history of the Volksjäger project, and is the first major history of this fascinating aircraft to be published in the English language. A natural accompaniment to the other detailed German aircraft monographs published by Classic Publications, it is certain to find a ready audience and will form an essential reference work to all those interested in the airpower of World War 2.

Modelling Luftwaffe Jets and Wonder Weapons Brett Green, 2012-11-20 While the Allies largely relied on mass production to help them win World War II, Germany put a great deal of their limited resources into new technologies and wonder weapons. In addition to these tangible assets, which were used with varying degrees of success, the drawing boards of Germany were littered with dozens of advanced designs that never reached the prototype or production stages. Many of these operational and paper projects advanced the pace and influenced the direction of aircraft development in the decades following World War II, with many of the German engineers responsible for these innovations seamlessly continuing their roles in the United States and the USSR. Modellers have had a long fascination for the Luftwaffe's jet arsenal and secret weapons of fact and fiction and this new Osprey Masterclass will explore the Luftwaffe jets and rocket planes that saw service at the end of World War II.

Heinkel He 162 Manfred Griehl, 2001-10-15 Operational and technical history of Germany's World War II jet fighter aircraft.

Heinkel He 162 Dan Sharp, 2020-04-19 The history of the Luftwaffe's last minute single-jet fighter, the Heinkel He 162, is neither standard nor straightforward. Originally conceived as the jet fighter anyone could fly into combat, the He 162 was designed and built in under five months - an astonishing and unparalleled feat of engineering. But what emerged was not a simple jet fighter but a tricky 'widow-maker' which killed far more of its own pilots than it ever did those of the enemy. Going back to the original wartime documentation, author Dan Sharp examines the story of this remarkable aircraft in detail.

The book features a detailed description of the aircraft's structure and technical data and a chapter about camouflage and markings. Complete with 112 pages, 99 photographs, 18 sheets of technical drawings in 1:48 and 1:72 scale with specification of external changes on production-run versions of the aircraft and 5 color charts with 8 examples of camouflage schemes. Heinkel He 219 UHU vol. I Marek Murawski, 2013-01-19 The Heinkel He 219 Uhu was a night fighter that served with the German Luftwaffe in the later stages of World War II. A relatively sophisticated design, the He 219 possessed a variety of innovations, including an advanced VHF-band intercept radar. It was also the first operational military aircraft in the world to be equipped with ejection seats, and the first operational German World War II-era aircraft with tricycle landing gear. Had the Uhu been available in quantity, it might have had a significant effect upon the strategic night bombing offensive of the Royal Air Force; but only 294 of all models were built by the end of the war and these saw only limited service.

He 162 Salamander Chris Meadows, 2010-08 The Salamander, He 162, was designed, constructed and produced all within 3 months. Within another 3 months it was operational in the field. The story is close to an industrial masterpiece, all happening within seven months of the end of the war. The He 162 worked and could have been a quite effective fighter. This is the story of a desperate last ditch weapon system that after its creation, became a huge success as an innovation and could have become an effective easy-to-use weapon, had the war lasted longer... This is the He 162s story

Deception in War Jon Latimer, 2003-04-29 From the Trojan Horse to Gulf War subterfuge, this far-reaching military history examines the importance and ingenuity of wartime deception campaigns. The art of military deception is as old as the art of war. This fascinating account of the practice draws on conflicts from around the world and across millennia. The examples stretch from the very beginnings of recorded military history—Pharaoh Ramses II's campaign against the Hittites in 1294 B.C.—to modern times, when technology has placed a stunning array of devices into the arsenals of military commanders. Military historians often underestimate the importance of deception in warfare. This book is the first to fully describe its value. Jon Latimer demonstrates how simple tricks have been devastatingly effective. He also explores how technology has increased the range and subtlety of what is possible—including bogus radio traffic, virtual images, even false smells. *Deception in War* includes examples from land, sea, and air to show how great commanders have always had, as Winston Churchill put it, that indispensable “element of legerdemain, an original and sinister touch, which leaves the enemy puzzled as well as beaten.”

Germany's Secret Weapons of World War II Roger Ford, 2021-03-02 Broken down by weapon types, the book includes reference tables, diagrams, colorful maps, charts and photographs, presenting all the core data in easy-to-follow formats.

Flying Wings and Tailless Aircraft Bill Rose, 2010 This is an exciting new addition to the highly successful Secret Projects series, which examines some extraordinary flying wings and tailless aircraft projects. Designed and developed since the dawn of aviation, these aircraft still hold a great importance today, with many aviation enthusiasts eager to learn more about these remarkable aircraft, which provided the foundations for the modern aviation scene. Beginning with an analysis of the advantages of the flying wing, the author looks at why aerodynamicists have been attracted to this unique configuration since the earliest days of manned flight, highlighting a range of specific aircraft and relevant examples. Many aviation enthusiasts will delight in discovering the more intimate developmental details of familiar aircraft including the famous early glider Junkers and other World War 1 flying wing biplane designs.

Wings on My Sleeve Eric Brown, 2008-09-18 The autobiography of one of the greatest pilots in history. In 1939 Eric Brown was on a University of Edinburgh exchange course in Germany, and the first he knew of the war was when the Gestapo came to arrest him. They released him, not realising he was a pilot in the RAF volunteer reserve: and the rest is history. Eric Brown joined the Fleet Air Arm and went on to be the greatest test pilot in history, flying more different aircraft types than anyone else. During his lifetime he made a record-breaking 2,407 aircraft carrier landings and survived eleven plane crashes. One of Britain's few German-speaking airmen, he went to Germany in 1945 to test the Nazi jets, interviewing (among others)

Hermann Goering and Hanna Reitsch. He flew the suicidally dangerous Me 163 rocket plane, and tested the first British jets. WINGS ON MY SLEEVE is 'Winkle' Brown's incredible story.
