**Flying Wings and Tailless Aircraft** Bill Rose,2010 This is an exciting new addition to the highly successful Secret Projects series, which examines some extraordinary flying wings and tailless aircraft projects. Designed and developed since the dawn of aviation, these aircraft still hold a great importance today, with many aviation enthusiasts eager to learn more about these remarkable aircraft, which provided the foundations for the modern aviation scene. Beginning with an analysis of the advantages of the flying wing, the author looks at why aerodynamicists have been attracted to this unique configuration since the earliest days of manned flight, highlighting a range of specific aircraft and relevant examples. Many aviation enthusiasts will delight in discovering the more intimate developmental details of familiar aircraft including the famous early glider Junkers and other World War 1 flying wing biplane designs.

**Horten Ho 229** Andrei Shepelev,Huib Ottens,2006 The Horten Ho 229, one of the Luftwaffe's legendary secret projects or so-called 'wonder weapons', was one of the most enigmatic aircraft designs to emerge from World War II. In some ways a precursor to the 'stealth' concept, it was clearly ahead of its time when compared to its contemporaries. The Ho 229 was planned as the first of the next generation of German jet fighters to follow on from the Messerschmitt Me262, with the intention to create a high-speed cannon-equipped fighter-bomber and reconnaissance aircraft. Development involved design bureaus such as Goering, Galland, and Lippish, and flight testing began in December 1944. This book covers the Ho 229's development and operational record in detail and includes specially commissioned photographs of a surviving prototype, J3. The authors are both acknowledged experts on Horton aircraft.

*To Command the Sky* Stephen L. McFarland,Wesley Phillips Newton,2006-03-06 This widely praised study draws from both American and German sources to show how the U.S. Army Air Forces cleared the way for the successful Allied invasion of France. In 1944 a revitalized American leadership abandoned the unsuccessful approach of strategic bombing and instead focused on air superiority, practically chasing the enemy out of the sky and eliminating Germany's supply of trained pilots. Examining the people, technologies, command decisions, and key events of the war over Germany, the authors prove conclusively that the winning of air superiority -- not the success of strategic bombing -- played a more essential part in the Allied victory in Europe

**Airpower and Ground Armies** Daniel R. Mortensen,1998

**Radar at Sea** Derek Howse,1993-02-09 This book tells in non-technical language how the British Navy contributed to the development of naval radar in World War 2. Addressed to the general reader, it tells not only the technical story in simple terms, but also of the operational use of shipborne radar at sea - for warning, for fire control, for fighter direction, for navigation, in all theatres of war - and particularly about the people who designed and fitted the equipment, and those who used it at sea.

Secret Aircraft Designs of the Third Reich David Myhra, 1998 In *Secret Aircraft Designs of the Third Reich* aircraft biographer David Myhra gives the reader much more than pictures of proposed German aircraft projects, although this work is richly illustrated by state-of-the-art digital images by Mario Merino. The total number of German projects is in excess of 400. Blohm und Voss tops the list with over 200 project designs. The reader is introduced to the men behind these proposed aircraft. One will discover Woldemar Voight's frustration with his Me P.1101 and why it simply would not jell. The reader will learn why Dr. Götthert of Gotha lobbied the RLM to take his Go P.60 designs and scrap the Horten Ho 229. We see why critics of design genius Alexander Lippisch said that he was a man who had a new design almost every day but fails to put most of them into the air. Myhra describes the shameful handling of Hugo Junkers, the father of German aviation, by the Gestapo. It was Junkers who said that ideas for advanced aircraft projects were about as cheap as blueberries. To an idea must be added materials, resources, and time. And time in all the secret projects was short, very short. Although over 400 aircraft projects were on the drawing board when the war in Europe ended in May 1945, only a handful were in the prototype stage. This outstanding book also offers a superb collection of photographs of scale models from contributors throughout the world, and digital images by Mario Merino and Andreas Ott that offer a one-of-a-kind look at secret German designs.

*The Watery Maze* Bernard Fergusson, 1961 During Britain's darkest hour, in 1940, extraordinary measures were necessary for survival. This bleak period of defense against the Axis led to the formation of Combined Operations, a semi-independent unit composed of admirals, generals, and air marshals. It became Britain's offensive team which, in the end, was instrumental in the successful invasions of North Africa, Sicily, and Normandy. Here is the complete story of the creation of that unit, beginning with a series of daring raids on the coasts of Norway, France, Africa, and Madagascar. These raids often resulted in great loss of life, but the lessons they taught the command led to dramatic successes. Combined Operations grew up with the war and played a part in the ultimate Allied victory in Europe and also in the Suez campaign of 1956--Taken from the book jacket flap.
