Introduction to UAV Systems Paul Fahlstrom,Thomas Gleason,2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in themilitary world over the last decade and the success of thesemilitary applications is increasingly driving efforts to establishunmanned aircraft in non-military roles. Introduction to UAV Systems,4th edition provides a comprehensiveintroduction to all of the elements of a complete Unmanned AircraftSystem (UAS). It addresses the air vehicle, mission planning andcontrol, several types of mission payloads, data links and how theyinteract with mission performance, and launch and recoveryconcepts. This book provides enough information to encourage astudent to learn more; to provide a specialist with a basicappreciation of the technical issues that drive other parts of thesystem and interact with their specialty; or to help a programmanager understand system-level tradeoffs and know what questionsto ask. Key features: Comprehensive overview of all elements of a UAS and of how theyinteract. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate tosubsystem design choices. Practical discussion of issues informed by lessons learned inUAV programs. Introduction to UAV Systems,4th edition is written both for newcomersto the subject and for experienced members of the UAV community whodesire a comprehensive overview at the system level. As well as being a primary text for an introductory course onUAS or a supplementary text in a course that goes into more depthin one of the individual technologies involved in a UAS, this bookis a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Achtung-Panzer! Heinz Guderian,1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Two Thousand Years of Economic Statistics Aleksandr Vladimirovich Avakov,2010-01-01 This statistical volume contains data usually unavailable in other statistical publications. It gives statistics for two groups of countries in their 2007 borders. First, since year 1950 (for 1950, 1960, 1970, 1980, 1990, 2000, and 2007), it provides statistical data for all countries of the world (232 countries). Second, since year 1 AD (for 0001, 1000, 1500, 1600, 1700, 1820, 1870, 1880, 1890, 1900, 1913, 1920, 1929, and 1938), it provides data for a smaller group of countries (133 countries). This book is based on the groundbreaking works of Angus Maddison but it differs from his books in that it gives data up to the most recent year available and calculates GDP (gross and per capita) in the prices of that most recent year. For the recent years, the World Bank, CIA, and Encyclopedia Britannica were principal sources. But, despite the author's great debt to these sources, the preponderance of data in the book is not direct citations from them but rather the result of calculations. Among other computational techniques he uses a new logarithmic interpolation which takes care of cross-country statistical distortions when calculating in the prices of the most recent year. For every line of data (for every country, each year), he provides a note on the technique used in obtaining his estimate (i. e., proxy, exponential interpolation, direct estimate with source citation, etc.). Dr. Avakov's annual title Quality of Life, Balance of Powers, and Nuclear Weapons gives a current snapshot of world statistics. This new work, Two Thousand Years of Economic Statistics, gives the population and current price GDP data in a historical perspective.

War in the Woods M. Laar,1992 With the Soviet reoccupation after World War II, Estonians faced a choice of submitting to Communist puppets or trying to survive in the traditional refuge of their forests while waiting for help from the West which never came. Those who chose the second course, Estonia's Forest Brothers, mounted an armed resistance which, for more than a decade, seriously challenged Soviet rule. This is their story, told for the first time by sources within Estonia. This account is drawn from interviews with Forest Brothers who survived and relatives of those who died, and from documents and photographs from Soviet KGB files. It reflects Estonian courage and humor, the faith and sacrifice of a people suppressed, and the indomitable determination of a free nation to regain independence.

Water Resources and Development Clive Agnew,Philip Woodhouse,2010-11-03 Since the start of the twenty-first century there has been an unprecedented focus upon water as a key factor in the future of both society and environment. Water management lies at the heart of strategies of development as does the added the hazard of climate change. Water Resources and Development provides a stimulating interdisciplinary introduction to the role of water resources in shaping opportunities and constraints for development. The book begins by charting the evolution of approaches to water management. It identifies an emerging polarization in the late twentieth century between 'technical' and 'social' strategies. In the past decade these two axes of policy debate have been further intersected by discussion of the scale at which management

decisions should be made: the relative effectiveness of 'global' and 'local' governance of water. A variety of case studies elaborate this analytical framework, exemplifying four key development challenges: economic growth, poverty reduction, competition and conflict over water, and adaptation to climate change. Current 'best practice' for water management is examined, addressing strategies of water supply augmentation, the ecological implications of intensified use, and strategies of demand management guided by economic or political principles. It is argued defining 'successful' water management and best practice requires first the establishment of development goals and the implicit trade-offs between water consumption and conservation. This engaging and insightful text offers a unique interdisciplinary analysis by integrating scientific, engineering, social and political perspectives. This is an essential text for courses on development studies, geography, earth sciences and the environment.
