The Mikoyan-Gurevich Mig-3 Vol. I Dariusz Paduch,2022-01-31 The MiG-3 fighter plane, like the history of the creation of the Mikoyan and Gurevich (Микоян и Гуревич) design bureau, is relatively well known to anyone interested in the history of Soviet aviation. Many books and articles have been published about this machine, but information about the circumstances of the birth of the project and the conditions of its creation are very brief and concise. MiG-1 and MiG-3 were the most numerous new generation fighters in Soviet aviation at the time of the German invasion of the USSR. They played a very important role in the first period of the war. Until now, it has been assumed in the literature that this applies mainly to the use of these aircraft during the battle of Moscow, as well as capital's and Leningrad's air defense, but MiGs also took on a large weight of air combat at the front in 1941.

The Mikoyan-Gurevich Mig-3 Vol. II Dariusz Paduch,2022-04-30 The I-200 fighter project was a compromise between design office's capabilities, realities of the Soviet aviation industry, with its available technologies, and military requirements. According to the brief description of the MiG-3 from 1941, it was, in terms of its purpose, an interceptor, but, interestingly, it could also be used as... an attack aircraft, or a light, fast dive bomber. Both the I-200 prototypes and the later MiG-1 and MiG-3 were single-seat, single-engine, mixed-design low-wing aircraft. Front part of the fuselage, together with the center wing, up to the rear wall of the pilot's cockpit, was made of metal. Only the tail part of the fuselage and wing consoles were wooden. Vertical stabilizer, which was an integral part of the fuselage, was made of wood, too, but horizontal stabilizer was all-metal. Rudders and ailerons had a metal construction and canvas cover. Undercarriage was made of chromansil steel. In front part of the fuselage there was a pilot's cabin with a seat, instrument panel and controls, front fuel tank, main offensive armament, water cooler and other components. Center wing was attached to the front part of the fuselage at seven points, the rear part at four points, while the engine mount was supported by two.

MiG-3 Aces of World War 2 Dmitriy Khazanov,2013-05-20 The MiG-1/3 family of fighters was built to satisfy a Soviet Air Force requirement for an advanced, fast, high-altitude fighter. Entering service in the spring of 1941, the problematic MiG-1 had its handling issues rectified with the hasty production of the MiG-3. Many of these were destroyed on the ground when the Germans launched Operation Barbarossa. Nevertheless, enough examples survived to allow pilots such as Stepan Suprun and Aleksandr Pokryshkin to claim a number of victories in the type. This book tells the complete story of the men who made ace in the first examples of the famous MiG fighter.

The Mikoyan-Gurevich MiG-1 & MiG-3 In Profile & Scale Erik Pilawskii,2021-05-02

The Chief Culprit Viktor Suvorov,2013-03-15 Bestselling author Victor Suvorov probes newly released Soviet documents and reevaluates existing material to analyze Stalin's strategic design to conquer Europe and the reasons behind his controversial support for Nazi Germany. A former Soviet army intelligence officer, the author explains that Stalin's strategy leading up to World War II grew from Vladimir Lenin's belief that if World War I did not ignite the worldwide Communist revolution, then a second world war would be needed to achieve it. Stalin saw Nazi Germany as the power that would fight and weaken capitalist countries so that Soviet armies could then sweep across Europe. Suvorov reveals how Stalin conspired with German leaders to bypass the Versailles Treaty, which forbade German rearmament, and secretly trained German engineers and officers and provided bases and factories for war. He also calls attention to the 1939 nonaggression pact between the Soviet Union and Germany that allowed Hitler to proceed with his plans to invade Poland, fomenting war in Europe. Suvorov debunks the theory that Stalin was duped by Hitler and that the Soviet Union was a victim of Nazi aggression. Instead, he makes the case that Stalin neither feared Hitler nor mistakenly trusted him. Suvorov maintains that after Germany occupied Poland, defeated France, and started to prepare for an invasion of Great Britain, Hitler's intelligence services detected the Soviet Union's preparations for a major war against Germany. This detection, he argues, led to Germany's preemptive war plan and the launch of an invasion of the USSR. Stalin emerges from the pages of this book as a diabolical genius consumed by visions of a worldwide Communist revolution at any cost—a leader who wooed Hitler and Germany in his own effort to conquer the world. In contradicting traditional theories about Soviet planning, the book is certain to provoke debate among historians throughout the world.

Red Eagles Steve Davies,2012-01-24 When two Navy F-14 Tomcats engaged and shot down two Sukhoi Su-22 jet fighters in 1981, they drew on experience and tactics that they had learned from a previous encounter with MiG jet fighters. The difference between the two encounters was that in the first, the enemy fighters were flown by American pilots assigned to a top secret squadron hidden at a remote airfield in the ultra-secret Tonopah Nuclear Test range, Nevada. In the second, the Sukhoi fighters were flown by Libyan pilots attempting to enforce Colonel Qadaffi's 'Line of Death' over the Gulf of Sidra. From the mid-1960s until the end of the Cold War, the United States Air Force acquired and flew Russian-made MiG jets, eventually creating a secret squadron dedicated to exposing American fighter pilots to enemy MiGs. Following underperformance in the Vietnam War, the USAF began to study MiGs in order to improve fighter pilot training. This then developed into the black Constant Peg program. In this program, MiGs were secretly acquired, and made airworthy, a difficult task without manuals or parts. A secret base was found to operate the planes from; and then ace pilots were found and trained to not only fly the assets, but fly them as they were flown by America's enemies. Finally, a program of exposing American fighter pilots to the MiGs was developed. In all, more than 1,600 American fighter pilots would train against America's secret MiGs between 1974 and 1989. Uncovering the story of the secret MiGs in America during the Cold War, and specifically Constant Peg and the 4477th Test & Evaluation Squadron, is a challenge because much of the information has been destroyed, or remains classified. To piece together the story of this group of men who provided America's fighter pilots with a level of training that was the stuff of dreams, author Steve Davies has interviewed over thirty of the Red Eagle pilots, along with other members of the squadron. This paperback edition includes new material on HAVE IDEA and other HAVE programs; making the MiGs airworthy in 1977 from the maintainers' perspective; and the intelligence activities of MiG expert at the Foreign Technology Division Mike Coyle. The result is a fascinating glimpse into a black program that enabled American fighter pilots to go into combat having already met and defeated their first MiG. Hardcover edition ISBN: 9781846033780

Visual Aircraft Recognition U. S. Army,2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

The Chinese Air Force Richard P. Hallion,Roger Cliff,Phillip C. Saunders,Center for the Study of Chinese Military Affairs (National Defense University),2012-10-03 Presents revised and edited papers from a October 2010 conference held in Taipei on the Chinese Air Force. The conference was jointly organized by Taiwan's Council for Advanced Policy Studies, the Carnegie Endowment for International Peace, the U.S. National Defense University, and the RAND Corporation. This books offers a complete picture of where the Chinese air force is today, where it has come from, and most importantly, where it is headed.

Korean War Aces Robert F Dorr,2013-01-20 The first virtually all-jet war, the conflict in Korea saw F-86 Sabres of the USAF take on MiG-15s of the North Korean and Chinese air forces. Although the Allied pilots

were initially taken aback by the ability of the communist fighter in combat, sound training and skilful leadership soon enabled Sabre pilots to dominate the dogfights over the Yalu River. In all 39 F-86 pilots achieved ace status, and a number of these are profiled in this volume, as are notable pilots from the US Navy, Marine Corps and Royal Navy and, for the first time, the handful of MiG-15 aces.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Sweeping Forward ,2013 The X-29 was an unusual aircraft with a truly unique silhouette. It combined many features that challenged the technologies of its day and represented special problems for the developers and the team of testers responsible for documenting its features and design goals. This book is a look at the big picture of what this team accomplished in a relatively fast-paced test program involving the truly unique X-29.

Foxbats Over Dimona Isabella Ginor,Gideon Remez,2008-10-01 Isabella Ginor and Gideon Remez’s groundbreaking history of the Six-Day War in 1967 radically changes our understanding of that conflict, casting it as a crucial arena of Cold War intrigue that has shaped the Middle East to this day. The authors, award-winning Israeli journalists and historians, have investigated newly available documents and testimonies from the former Soviet Union, cross-checked them against Israeli and Western sources, and arrived at fresh and startling conclusions. Contrary to previous interpretations, Ginor and Remez’s book shows that the Six-Day War was the result of a joint Soviet-Arab gambit to provoke Israel into a preemptive attack. The authors reveal how the Soviets received a secret Israeli message indicating that Israel, despite its official ambiguity, was about to acquire nuclear weapons. Determined to destroy Israel’s nuclear program before it could produce an atomic bomb, the Soviets then began preparing for war--well before Moscow accused Israel of offensive intent, the overt trigger of the crisis. Ginor and Remez’s startling account details how the Soviet-Arab onslaught was to be unleashed once Israel had been drawn into action and was branded as the aggressor. The Soviets had submarine-based nuclear missiles poised for use against Israel in case it already possessed and tried to use an atomic device, and the USSR prepared and actually began a marine landing on Israel’s shores backed by strategic bombers and fighter squadrons. They sent their most advanced, still-secret aircraft, the MiG-25 Foxbat, on provocative sorties over Israel’s Dimona nuclear complex to prepare the planned attack on it, and to scare Israel into making the first strike. It was only the unpredicted devastation of Israel’s response that narrowly thwarted the Soviet design.
