Mitsubishi Type 1 Rikko 'Betty' Units of World War 2

Osamu Tagaya, 2013-01-20 The most produced Japanese bomber of the war the G4M saw action on every front from the first day of the Pacific conflict through to VJ-Day. The 'Betty's' very long range made it a key weapon during the opening year of the war. However, to achieve this, the aircraft was built with very little protective armour for its crew or fuel tanks, and Allied pilots soon exposed its extreme vulnerability. In the first in a series of volumes examining the key Japanese aircraft of WW2, Dr Osamu Tagaya details the G4M's extensive combat history, and lists all the units which operated the bomber.

Japanese Naval Air Force Camouflage and Markings, World War II Donald W. Thorpe, 1977

seven hundred illustrations of military aircraft of World War II used by both Allied and Axis Countries, together with capsule specifications and history

Military Aircraft, 1919-1945 Justin D.

Murphy, Matthew A. McNiece, 2009 An in-depth history of the time when airpower became the great equalizer, changing military strategy forever and bringing once-safe targets in reach. *Military Aircraft, 1919-1945: An Illustrated History of Their Impact* covers a crucial era in modern warfare technology. Ranging from the development of airpower doctrines in the aftermath of World War I to the aircraft and missions that put those doctrines into action during World War II, it provides an expert summing-up of the decades when the use of aircraft in battle came of age. In chapters covering both the history of air power and specific types of aircraft (fighters, bombers, reconnaissance and auxiliary planes), *Military Aircraft, 1919-1945* introduces key theorists and designers, describes important changes in technology and production, and recreates spectacular episodes from Pearl Harbor to the London Blitz to the Enola Gay. Readers will see the dramatic impact of the first generation of modern military aircraft on land and sea. They will also see how the expansion of war to the skies brought economic opportunity to some home fronts, and looming terror and devastation to others.

Flying Wings and Tailless Aircraft Bill Rose, 2010

This is an exciting new addition to the highly successful Secret Projects series, which examines some extraordinary flying wings and tailless aircraft projects. Designed and developed since the dawn of aviation, these aircraft still hold a great importance today, with many aviation enthusiasts eager to learn more about these remarkable aircraft, which provided the foundations for the modern

aviation scene. Beginning with an analysis of the advantages of the flying wing, the author looks at why aerodynamicists have been attracted to this unique configuration since the earliest days of manned flight, highlighting a range of specific aircraft and relevant examples. Many aviation enthusiasts will delight in discovering the more intimate developmental details of familiar aircraft including the famous early glider Junkers and other World War 1 flying wing biplane designs.

The Hamlyn Guide to Military Aircraft Markings

Barry C. Wheeler, 1992 This handbook for aeroplane enthusiasts and modellers describes the history and evolution of aircraft markings and camouflage since 1914, and includes an illustrated guide to the markings of 140 war and peacetime aircraft from air forces across the world.

Japanese Secret Projects Edwin M. Dyer, 2009

Surprisingly, secret Japanese planes of World War II remain an area that has been largely ignored due to scarcity of information. They do, however, have a large base of interest as unlike the majority of secret Luftwaffe programs that were resigned to the drawing board, the vast number of aircraft featured within this book actually flew or were in development. The book begins with an overview of the IJN and IJA through the early years to 1945, and their secret technical exchanges with the Luftwaffe throughout the war. It is divided into two sections dedicated to the two armed forces, with a total of 34 aircraft examined, each with its history, performance, and combat records laid out in an easy to read fashion. The book provides photographs, technical drawings, and stunning color renditions of the aircraft in combat. Notable emphasis is placed upon the supersonic kamikaze aircraft, the Amerika bomber, and the ways in which the Japanese

improved on German technology, particularly the Me 262 and Komet. Secret Japanese armaments are also covered in detail, with information uncovered on guided missiles, rockets, and cannons. A gripping read for aviation and military enthusiasts around the world!
