War in a Stringbag Charles Lamb, 2001 A classic autobiography by the best known Second World War Fleet Air Arm pilot. A story of real life adventure, action and heroism. Commander Charles Lamb fought an exceptional war flying the slow and obsolete Fairey Swordfish for the Fleet Air Arm. It was an antiquated machine, but it could outmanoeuvre almost any other aircraft, and in Charles Lamb's hands, the 'Stringbag' - as the torpedo bomber was affectionately known - was a deadly weapon. Charles Lamb fought in the thick of the action. This is his story, from the first day of war as a Lieutenant on board *Courageous*, to the accident aboard *Implacable* in action against the Japanese in June 1945 which ended his war. A rare account of determination, action and spirit by a man who was an inspiration to those around him.

Danger's Hour Maxwell Taylor Kennedy, 2009-11-03 Drawing on years of research and firsthand interviews with both American and Japanese survivors, Maxwell Taylor Kennedy draws a gripping portrait of men bravely serving their countries in war and the advent of a terrifying new weapon, suicide bombing, that nearly halted the most powerful nation in the world. In the closing months of World War II, Americans found themselves facing a new weapon: kamikazes--the first men to use airplanes as suicide weapons. By the beginning of 1945, facing imminent invasion, Japan turned to its most idealistic young men and demanded of them the greatest sacrifice. On May 11, 1945, days after Germany's surrender, the USS *Bunker Hill*--with thousands of crewmen and the most sophisticated naval technology available--

was 70 miles off the coast of Okinawa when pilot Kiyoshi Ogawa flew his plane into the ship, killing 393 Americans in the worst suicide attack against America until September 11.--From publisher description.

Rapid Fire Anthony G. Williams, 2002-10-22 A comprehensive account of the heavy automatic weapons developed in every nation throughout the 20th century. Contains tabulated data for the weapons and ammunition as well as a cartridge identification guide.

A Lonely Kind of War Marshall Harrison, 2010-12-15 From retired Air Force pilot Marshall Harrison comes a remarkable memoir of aerial warfare in Vietnam. In his third combat tour, Harrison found himself “converted” from the high performance world of jets to the awkward-looking OV-10 Bronco and assigned as a FAC — forward air controller. A captivating tale of valor, brotherhood, and patriotism unravels in the pages of A Lonely Kind of War, Forward Air Controller, Vietnam, a posthumous release by this published author through Xlibris. Harrison is a born story teller. There is excitement, suspense, and humor in this account of the life of a FAC. They were a small group of dedicated pilots flying lightly armed prop-driven aircrafts in South Vietnam. Considered to be the eyes and ears of the attack aircraft, their job was to fly low and slow, find, fix, and direct airstrikes against an elusive enemy concealed by the heavy rainforest and jungles, an area the FACs referred to as “the Green Square”. The flying scenes are riveting: learning to fly the maneuverable Bronco, clearing in the “fast-movers” to drop massive 750-lb bombs without causing injury to the “friendlies”, and conducting covert operation into Cambodia---“over the fence with the mad men in the green beanies”. On one of these secret missions, he is shot down and spends a harrowing night in the jungle. FACs lived with the troops in the field and flew from unimproved airstrips; they virtually controlled the aerial battlefields of South Vietnam. Their losses were staggering and

they usually died alone.

Zero Fighter Martin Caidin, 1970 The agile, brilliant fighter planes and their masterly pilots blasted all oppositions from the air. The '... weren't just good--they were hell on wheels'. For a fatally long time the horrifying reports came in and were disbelieved. For that space zero fighter ruled the Pacific sky.

Fighter Combat Robert L. Shaw, 1985 This book provides a detailed discussion of one-on-one dog-fights and multi-fighter team work tactics. Full discussions of fighter aircraft and weapons systems performance are provided along with an explanation of radar intercept tactics and an analysis of the elements involved in the performance of fighter missions.

Aircraft Design Projects Lloyd R. Jenkinson, Jim

Marchman, 2003-04-28 Written with students of aerospace or aeronautical engineering firmly in mind, this is a practical and wide-ranging book that draws together the various theoretical elements of aircraft design - structures, aerodynamics, propulsion, control and others - and guides the reader in applying them in practice. Based on a range of detailed real-life aircraft design projects, including military training, commercial and concept aircraft, the experienced UK and US based authors present engineering students with an essential toolkit and reference to support their own project work. All aircraft projects are unique and it is impossible to provide a template for the work involved in the design process. However, with the knowledge of the steps in the initial design process and of previous experience from similar projects, students will be freer to concentrate on the innovative and analytical aspects of their course project. The authors bring a unique combination of perspectives and experience to this text. It reflects both British and American academic practices in teaching aircraft design. Lloyd Jenkinson has taught aircraft design at both Loughborough and Southampton universities in the UK and Jim Marchman has

taught both aircraft and spacecraft design at Virginia Tech in the US. * Demonstrates how basic aircraft design processes can be successfully applied in reality * Case studies allow both student and instructor to examine particular design challenges * Covers commercial and successful student design projects, and includes over 200 high quality illustrations

Why the Samurai Lost Japan John D Beatty, Lee A Rochwerger, 2018-12-15 Beginning in the late 19th century, Imperial Japan embarked on a program of aggressive military overseas adventures in Asia and the Pacific. From 1904 to 1941, Japan's desire for resource independence had driven them to conquer Korea, Manchuria, large parts of China, and French Indochina, and to occupy large swaths of Pacific islands. These conquests provided tremendous resources, but still, they needed more. All these conquests were driven by the Samurai: the ancient warriors of Japan, answerable only to the needs for resources, an ill-defined bushido code, and their Emperor. They led Japan into a horrible war stretching across a third of the Earth's surface, knowing full well they could not defeat their enemies. Their plan was the uncertain hope that the West would falter and offer an olive branch, accepting Japanese hegemony in the Pacific and East Asia and granting them the resources they needed. This was a miscalculation driven by a folly of epic proportions. Four months of early and easy victories in 1941 convinced them of their invincibility. They refused to believe that their fighting spirit could be defeated by superior firepower and the sheer numbers of opponents. And the samurai had no Plan B.

The Secret Horsepower Race: Western Front Fighter Engine Development - Special Edition Merlin Calum E.

Douglas,2021-04-25 The piston engines that powered Second World War fighters, the men who designed them, and the secret intelligence work carried out by both Britain and Germany would determine the outcome of the first global air war. Advanced jet engines may have been in development but every militarily significant air battle was fought by piston-engined fighters. Whoever designed the most powerful piston engines would win air superiority and with it the ability to dictate the course of the war as a whole. This is the never before told story of a high-tech race, hidden behind the closed doors of design offices and intelligence agencies, to create the war's best fighter engine. Using the fruits of extensive research in archives around the world together with the previously unpublished memoirs of fighter engine designers, author Calum E. Douglas tells the story of a desperate contest between the world's best engineers - the

Secret Horsepower Race.

366 Days of World War II Richard Binder, 2015-02-21 World War II lasted six years. That's 2,194 days. What happened in those six years? In this new diary, author Richard Binder takes a radical new approach to telling the story of the worst conflict humanity has ever experienced. Instead of trying to cover everything, he relates the happenings of just 366 days, the length of a single year. Choosing events great and small from the beginning of the war to its bitter end, he gives you a fascinating and sometimes shocking look at things you know from your high-school history and things you may never have heard of.
