The de Havilland Mosquito Michael John Hardy, 1977

Carl A. Spaatz and the Air War in Europe Richard G. Davis, 1993 This is the first detailed examination of the career of the highest-ranking U.S. Army Air Forces officer in Europe during World War II.

The War in the Air, 1914-1994 Alan Stephens, 2001 This book contains the proceedings of a conference held by the Royal Australian Air Force (RAAF) in Canberra in 1994. Since its publication by the RAAF's Air Power Studies Center in that year, the book has become a widely used reference at universities, military academies, and other educational institutions around the world. The application of aerospace power has seen significant developments since 1994, most notably through American-led operations in Central Europe and continuing technological advances with weapons, uninhabited vehicles, space-based systems, and information systems. But notwithstanding those developments and the passing of six years, the value of this anthology of airpower in the twentieth century seems undiminished.

Coral and Brass Holland M. Smith, Percy Finch, 2017-06-29 *Coral and Brass* is the biography of General Holland McTyeire Howlin' Mad Smith, known as the father of modern U.S. amphibious warfare. His book is a riveting first-hand account of key battles fought in the Pacific between the U.S. Army and Canadian troops against the Japanese, including assaults on the Gilbert Islands, the Marshall Islands, the island of Saipan, Tinian in the Marianas and Iwo Jima.

Beauffers Over Sea, Sand and Steaming Jungles Jack Colman, 2019-12-08 In October 1943, Jack Colman changed from Liberators to Beauffers and was selected for Torbeau training in Scotland. He joined a strike wing at North Coates attacking North Sea convoys off the coast of Holland. Later, Jack and his Beauffer were sent to the Far East where he was deployed to fly out of Assam over Burma supporting the Forgotten Army. Midway through the tour, they converted to Mosquitoes - a change he was not particularly happy about. After a short rest converting pilots to Mosquitoes, he felt lucky to be put in charge of a small unit flying service personnel to various venues in southern India. Jack's enthusiasm for flying is maintained and his lucky escapes documented. His fascination with the cultural and social experiences gained in India leaves its mark as he comments on the privileges he experiences, now as a commissioned officer, and of the wealth chasm between the princes and the poor of India. This is a book not just about flying but how one man and his comrades lived through those unique and special times.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. *Fundamentals of Aircraft and Rocket Propulsion* provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

100 Great War Movies Robert J. Niemi, 2018-04-04 This book serves as a fascinating guide to 100 war films from 1930 to the present. Readers interested in war movies will learn surprising anecdotes about these films and will have all their questions about the films' historical accuracy answered. This cinematic guide to war movies spans 80 years in its analysis of films from those set in the 13th

century Scottish Wars of Independence (Braveheart) to those taking place during the 21st-century war in Afghanistan (Lone Survivor). World War II has produced the largest number of war movies and continues to spawn recently released films such as Dunkirk. This book explores those, but also examines films set during such conflicts as the Napoleonic Wars, the American Civil War, World War I, the Vietnam War, and the wars in Afghanistan and Iraq. The book is organized alphabetically by film title, making it easy to navigate. Each entry is divided into five sections: Background (a brief discussion of the film's genesis and financing); Production (information about how, where, and when the film was shot); Synopsis (a detailed plot summary); Reception (how the film did in terms of box office, awards, and reviews) and Reel History vs. Real History (a brief analysis of the film's historical accuracy). This book is ideal for readers looking to get a vivid behind-the-scenes look at the greatest war movies ever made.

The Encyclopedia of Aerodynamics Frank Hitchens, 2015-11-25 The Encyclopedia of Aerodynamics was written for pilots at all levels from private pilot to airline pilot, military pilots and students of aerodynamics as a complete reference manual to aerodynamic terminology. General aerodynamic text books for pilots are relatively limited in their scope while aerodynamic text books for engineering students involve complex calculus. The references in this book, The Encyclopedia of Aerodynamics, are clearly described and only basic algebra is used in a few references but is completely devoid of any calculus - an advantage to many readers. Over 1400 references are included with alternative terms used where appropriate and cross-referenced throughout. The text is illustrated with 178 photographs and 96 diagrams. The Encyclopedia of Aerodynamics is an ideal aerodynamic reference manual for any pilot's bookshelf.

Diary of a Disaster Robin Higham, 2014-07-11 On October 28, 1940, the Italian army under Benito Mussolini invaded Greece. The British had insisted on guaranteeing Greek and Turkish neutrality, despite the fact that Greece was never more than a limited campaign in an unlimited war as far as they were concerned. The British, however, were never quite sure that Greece was not their last foothold in Europe, and they harbored dreams of holding on to this last bastion of civilization and of protecting it with a diplomatic and military alliance -- a Balkan bloc. These dreams bore little relation to military and economic realities, and so the stage was set for tragedy. In *Diary of a Disaster*, Robin Higham details the unfolding events from the invasion, through the Italian defeat and the subsequent German invasion, until the British evacuation at the end of April 1941. The Greek army, while tough, was small and based largely upon reserves. They were also largely equipped with obsolete French, Polish, and Czech arms for which there was now no other source than captured Italian materiel. Transportation was also lacking as Greece lacked all-weather roads over much of the country, had no all-weather airport, and only one rail line connecting Athens with Salonika and Florina in the north. Added to the woes of the Greek military, the British commander-in-chief for the Middle East, Sir Archibald Wavell, faced huge logistical challenges as well. Based in Cairo, he was responsible for a huge theatre of operation, from hostile Vichy French forces in Syria to the Boers in South Africa nearly six thousand miles away. His air force was comprised of only a handful of modern aircraft with biplanes and outdated, early monoplanes making up the bulk of his force. Radar was also unavailable to him. His navy was woefully short on destroyers and often incommunicado while at sea. While Wavell had roughly 500,000 men under his command, he was severely limited in how he could use them. The South Africans could only be deployed in East Africa and the Austrians and New Zealanders could not be employed without the consent of their home governments. In short, Churchill had instructed Wavell to offer support that he did not really have and could not afford to give to the Greeks. Higham walks readers through these events as they unfold like a modern Greek tragedy. Using the format of a diary, he recounts day-by-day the British efforts through the failure of Operation Lustre, which no one outside of London thought had any chance of stemming the Nazi tide in Greece.

Case Study in Guerrilla War American University (Washington, D.C.). Special Warfare Research Division, Doris M. Condit, 1961

B-17, Fortress at War Roger A. Freeman, 1977

100 Years of Radar Gaspare Galati, 2015-09-15 This book offers fascinating insights into the key

technical and scientific developments in the history of radar, from the first patent, taken out by Hülsmeyer in 1904, through to the present day. Landmark events are highlighted and fascinating insights provided into the exceptional people who made possible the progress in the field, including the scientists and technologists who worked independently and under strict secrecy in various countries across the world in the 1930s and the big businessmen who played an important role after World War II. The book encourages multiple levels of reading. The author is a leading radar researcher who is ideally placed to offer a technical/scientific perspective as well as a historical one. He has taken care to structure and write the book in such a way as to appeal to both non-specialists and experts. The book is not sponsored by any company or body, either formally or informally, and is therefore entirely unbiased. The text is enriched by approximately three hundred images, most of which are original and have been accessed by detailed searches in the archives.

Fire Across the Desert Peter Morton, 1989

Song of the Beauforts Colin M. King, 2008 This book records the exploits of the airmen of the first Australian Beaufort squadron in action in World War II. Developed as a torpedo and general reconnaissance bomber, the Beaufort was the heaviest, most powerful and most complex aircraft ever built in this country. It entered service with the Royal Australian Air Force at a time when Japanese invasion seemed imminent. As the tide of the war in the South-West Pacific turned from one mostly fought over the ocean to a land-based operation, the original squadron was joined by additional Beaufort units to form the RAAF's No 71 Wing. Employing new methods of warfare, the Beaufort crews closely supported American and Australian ground forces. Using participants' own words to describe events, from the hazards of training to the fury of offensive operations, the author vividly brings to life the bravery of the aviators and the dedication and skill of the ground crews who operated Beauforts during the protracted campaign across the South-West Pacific.

Plan B 3.0: Mobilizing to Save Civilization (Substantially Revised) Lester R. Brown, 2008 Provides alternative solutions to such global problems as population control, emerging water shortages, eroding soil, and global warming, outlining a detailed survival strategy for the civilization of the future.

A Dictionary of Epidemiology Miquel S. Porta, Sander Greenland, Miguel Hernán, Isabel dos Santos Silva, John M. Last, 2014 This edition is the most updated since its inception, is the essential text for students and professionals working in and around epidemiology or using its methods. It covers subject areas - genetics, clinical epidemiology, public health practice/policy, preventive medicine, health promotion, social sciences and methods for clinical research.

Developments and Challenges for Autonomous Unmanned Vehicles Anthony Finn, Steve Scheding, 2010-03-17 It is widely anticipated that autonomous vehicles will have a transformational impact on military forces and will play a key role in many future force structures. As a result, many tasks have already been identified that unmanned systems could undertake more readily than humans. However, for this to occur, such systems will need to be agile, versatile, persistent, reliable, survivable and lethal. This will require many of the vehicles 'cognitive' or higher order functions to be more fully developed, whereas to date only the 'component' or physical functions have been successfully automated and deployed. The book draws upon a broad range of others' work with a view to providing a product that is greater than the sum of its parts. The discussion is intentionally approached from the perspective of improving understanding rather than providing solutions or drawing firm conclusions. Consequently, researchers reading this book with the hope of uncovering some novel theory or approach to automating an unmanned vehicle will be as disappointed as the capability planner who anticipates a catalogue of technical risks and feasibility options against his favoured list of component technologies and potential applications. Nevertheless, it is hoped that both will at least learn something of the other's world and that progress will ensue as a result. For the defence policy and decision maker, this is a must-read book which brings together an important technology summary with a considered analysis of future doctrinal, legal and ethical issues in unmanned and autonomous systems. For research engineers and developers of robotics, this book provides a unique perspective on the implications and consequences of our craft; connecting what we

do to the deployment and use of the technology in current and future defence systems. Professor Hugh Durrant-Whyte

A History of Navigation in the Royal Air Force ,1997

The Forgotten Army Peter Ward Fay,1995 The first complete history of the Indian National Army and its fight for independence against the British in World War II.

Technical and Military Imperatives L Brown,1999-01-01 Technical and Military Imperatives: A Radar History of World War II is a coherent account of the history of radar in the second World War. Although many books have been written on the early days of radar and its role in the war, this book is by far the most comprehensive, covering ground, air, and sea operations in all theatres of World War II. The author manages to synthesize a vast amount of material in a highly readable, informative, and enjoyable way. Of special interest is extensive new material about the development and use of radar by Germany, Japan, Russia, and Great British. The story is told without undue technical complexity, so that the book is accessible to specialists and nonspecialists alike.
