Marian Mikolajczuk

**Yakovlev YAK-23** Marian Mikolajczuk,2008-10-01 The Yak-23 was the final development of the highly successful Soviet fighter series which began with the Yak-1 in 1940. Its immediate predecessors were the Yak-15 and Yak-17, both simple jet-powered Seriesversions of the wartime Yak-3; the Yak-23 was an updated all-metal version of the basic design. It saw service with several Warsaw Pact air forces, as a lightweight fast-climbing interceptor. The design, development and operations of the Yak-15, -17 and -23 are described and illustrated in this book, which is complete with photos, scale plans, drawings and color profiles. An essential guide to these first-generation Soviet fighter aircraft!

**Yakovlev Aircraft Since 1924** Bill Gunston,Yefim Gordon,1997 Alexandr S. Yakovlev was one of the most versatile aircraft designers of his age, but he had the misfortune to work in the USSR which made him almost unknown to the outside world. In 1926-27 he built his first aeroplane and from then on he designed structures which were, time and again, ahead of their time.

*The Yakovlev Yak-9 In Profile & Scale Part I* Erik Pilawskii,2021-07-02 Volume № 8 of the Profile & Scale series details the Yakovlev Yak-9 fighter to an entirely new standard of authenticity. More than 65 Yak-9 examples are faithfully documented in full-colour profile, many appearing for the first time. Forty-four pages of original and not previously published 1:48 scale line drawings reveal the development and complexity of the Yak-9 family as never before. These line drawings are the culmination of nearly 30 years' dedicated work on the Yak family, and should present the most complete, accurate and illuminating scale work regarding the aircraft at the present time. The book presents many development and variant detail facts about the Yak-9 which have hitherto been unclear. The scale drawings and profiles are complimented by many photographs, diagrams, appendicies and other documentary material to explain the technical and construction details of the Yak-9 models covered by this volume: Yak-9, -9D, -9T, -9R and -9B. It is fervently hoped that at long last many hitherto confused or inaccurate details of the Yak-9 family will be clarified and rectified. Many of the colour profiles represent examples which will be familiar to students of the Yak-9, albeit completed to the utmost standard of accuracy. Several profiles will doubtless be new even to experienced readers, and it is hoped these will delight both the casual reader and the serious student, equally. A brief awards and claim graphic is provided for a number of aces. These pilot cards will round out a volume which should be a treasure trove of information regarding the Yak-9 fighter for both modellers and students of history.

**Yakovlev Yak-3** Artur Juszczak,2017-06-19 40 color profiles of famous Yakovlev Yak-3 fighter showing variety of the camouflage and markings of different users. Includes aircraft used by French Normandie-Niemen Regiment. Also plan views showing camouflage and markings.

The Yakovlev Yak-7 In Profile & Scale Erik Pilawskii,2021-07 Volume № 7 of the Profile & Scale series details the Yakovlev Yak-7 fighter to an entirely new standard of authenticity. More than 65 Yak-7 examples are faithfully documented in full-colour profile, many appearing for the first time. Forty-four pages of original and not previously published 1:48 scale line drawings reveal the development and complexity of the Yak-7 family as never before. These line drawings are the culmination of nearly 30 years' dedicated work on the Yak family, and should present the most complete, accurate and illuminating scale work regarding the aircraft at the present time. The book presents many development and variant detail facts about the Yak-7 which have hitherto been unclear. The scale drawings and profiles are complimented by more than 35 photographs, some never before published. It is fervently hoped that at long last many hitherto confused or inaccurate details of the Yak-7 family will be clarified and rectified. A discussion of the peculiarities of the Moscow built examples is included. Many of the colour profiles represent examples which will be familiar to students of the Yak-7, albeit completed to the utmost standard of accuracy. Several profiles will doubtless be new even to experienced readers, and it is hoped these will delight both the casual reader and the serious student, equally. A brief awards and claim graphic is provided for a number of aces. These pilot cards will round out a volume which should be a treasure trove of information regarding the Yak-7 fighter for both modellers and students of history.

*Yakovlev Yak-1, Yak-3, Yak-7, Yak-9* Wojciech Sankowski,Wojciech Zmyslony,2015 By 1941, the career of the Spitfire is well underway and the RAF has a powerful aircraft with the Mark V that exceeds all expectations. But it is the Mk IX, commissioned urgently in the summer of 1942, which becomes the most famous Spitfire. The latest version of the Spitfire, the Mark XVI, fitted with a Rolls Royce Merlin engine, is actually a Mk.

**Early Soviet Jet Fighters** Yefim Gordon,Dmitriy Komissarov,2014-04 By the end of the Second World War the USA and Great Britain had developed viable jet fighters, even if these aircraft came a bit too late to have a significant impact on the course of the conflict. Germany achieved greater success, using the Me 262 and He 162 jet fighters operationally in the closing stages of the war. In contrast, the Soviet Union lagged behind, even though research on turbojet engines had begun in the USSR in the late 1930s. This deficiency was recognized and at the end of the war, captured German jet aircraft and engines enabled the USSR to reverse-engineer the technology. Even so, the USSR struggled to catch up until in 1946, the British Labor government gifted the Soviets the latest in propulsion technology, the Rolls-Royce Nene and Derwent V engines. This inexplicable action allowed a much more capable generation of Soviet jet fighters to be born and by the end of the 1940s Soviet industry had caught up with, and in some respects surpassed the West, in jet aviation. Because of the Stalinist era in which the first Soviet jets were developed, up until now little has been known about the early post-war designs from the design bureaus of Mikoyan, Yakovlev, Lavochkin, Sukhoi and Alekseyev and the background to even relatively well-known types such as the MiG-9, La-9 and YAK-15 is barely documented. Other early jet types, proposals and projects were virtually unknown in the West. This gap is now redressed by the famous Soviet aviation historian Yefim Gordon and in his latest work he draws on extensive research in design bureau files, official documents and military archives, many of which have only very recently become available, having been labelled 'Top Secret' for decades. This volume presents, in considerable detail, the development, history and technical specifications of the earliest Soviet jet fighters and the extensive illustrations-around 750 photos, over 50 specially-commissioned color drawings and a host of line drawings--are mostly from previously classified sources the majority of which are previously unseen. This book is certain to be essential reading for aviation historians, enthusiasts and modelers.

Yak 23 Albert Osinski,2010-01-05 - Includes free decals and masking foil - Packed with color photos The Yak-23 was developed as a simple lightweight jet fighter, as a development of the earlier Yak-15 and Yak-17 fighters, retaining their non-conventional layout with a jet engine in the fuselage nose and exhaust under the cockpit, but the construction was all new. Its wings were derived from the Yak-19. The Yak-23 used a Soviet copy of the British Rolls-Royce Derwent V turbojet engine, produced as the Klimov RD-500. It first flew on July 8, 1947. After successful flights, it underwent state trials in 1948 and was accepted for series production. It was evaluated as highly maneuverable, with a good acceleration and takeoff and climb capabilities thanks to high thrust-to-weight ratio. This album of detailed photographs is invaluable for the modeler or enthusiast alike. All photo captions are in English with a Polish summary provided. About the Series This is a classic series of highly illustrated books on the best machines of war, with several hundred photographs of each aircraft or vehicle. With close-up views of the key features of each machine, including its variations, markings and modifications, customizing and creating a model has never been easier. Includes extra features such as decals and masking foil.

**The Soviet Fighter Yakovlev Yak-3** Anirudh Rao,2020-12-28 Yakovlev Yak-3 is considered one of the best World War 2 fighters, invariably praised by those who flew it in combat for its remarkable performance. The Germans also treated it with respect, which is perhaps best illustrated by Generalleutnant Walter Schwabedissen's remark: The Yak-3 was a tough nut to crack for our pilots. It outperformed our machines in speed, maneuverability and rate of climb. The emergence of Yak-3 was a compromise between the need to improve the Yak-1's characteristics and the limitations of Soviet aircraft industry and its outdated technologies. The basic design concept took those shortcomings into account, which allowed a rapid launch of mass production of this inexpensive fighter. This in turn would provide frontline units with timely deliveries of new equipment to recoup combat losses. The key to Yak-3's success was not the use of a new powerplant (in those days hard to come by in the USSR), but rather squeezing every bit of performance out of the M-105PF engine, which resulted in a five percent increase in power output. In combination with some serious weight shedding, the Yak-3 had a significantly better performance than the Yak-1. At altitudes up to 5,000 m (which is where most of the air combat over Eastern Front took place), Yak-3 outperformed both the Bf-109 and Fw-190 in rate of climb and maneuverability. Unlike the Yak-1, the new fighter could also stay with the enemy in a dive.

**Notes of an Aircraft Designer** Alexander Yakovlev,2001-09-01 This is the frank and engaging autobiography of one of the Soviet Union's most successful aircraft designers. Yakovlev is best known for his piston-engined fighters, his sports planes, some early Soviet helicopters, and the first Soviet all-weather jet fighter. The book includes his interesting, and caustic, impressions of the aircraft industries of Western Europe, which Yakovlev visited in the late thirties. Alexander S. Yakovlev was one of the most versatile aircraft designers of his age, but he had the misfortune to work in the USSR, which made him almost unknown to the outside world. In 1926-27 he built his first aeroplane, the AIR-1, and from then on he consistently designed structures which were years ahead of their time. Yakovlev died in 1989, and today his design bureau, still on the site of the old bed factory, is the giant Yak Aircraft Corporation. It produces the most important Russian twinjet airliner, a diverse group of general aviation aircraft, an advanced jet trainer and light attack aircraft and, in conjunction with the Museum of Flying in California, replicas of the Yak-3 wartime fighter. The Yakovlev Design Bureau has designed aircraft from gliders to jet transports, not to mention vertical take-off fighters and helicopters since before World War II.

MIG Alley: The Fight For Air Superiority [Illustrated Edition] William Y'Blood,2014-08-15 Includes more than 20 photo illustrations The fight for air superiority began the day the Korean War started and only ended with the armistice three years later. Once the shock of the North Koreans' invasion wore off, it did not take long for the United States Air Force, assisted by other United Nations air forces, to destroy the North Korean Air Force. The arrival of the MiG-15 in November 1950, often flown by Soviet pilots, changed things considerably however. For the remainder of the war, bitterly contested air battles were fought almost daily. Yet despite a decided numerical superiority in jet fighters, the Communists were never able to gain air superiority, testament to the skill and training of the UN fighter pilots, primarily those U.S. Air Force airmen flying the magnificent F-86 Sabre.

*Aircraft Design Projects* Lloyd R. Jenkinson,Jim Marchman,2003-04-28 Written with students of aerospace or aeronautical engineering firmly in mind, this is a practical and wide-ranging book that draws together the various theoretical elements of aircraft design - structures, aerodynamics, propulsion, control and others - and guides the reader in applying them in practice. Based on a range of detailed real-life aircraft design projects, including military training, commercial and concept aircraft, the experienced UK and US based authors present engineering students with an essential toolkit and reference to support their own project work. All aircraft projects are unique and it is impossible to provide a template for the work involved in the design process. However, with the knowledge of the steps in the initial design process and of previous experience from similar projects, students will be freer to concentrate on the innovative and analytical aspects of their course project. The authors bring a unique combination of perspectives and experience to this text. It reflects both British and American academic practices in teaching aircraft design. Lloyd Jenkinson has taught aircraft design at both Loughborough and Southampton universities in the UK and Jim Marchman has taught both aircraft and spacecraft design at Virginia Tech in the US. \* Demonstrates how basic aircraft design processes can be successfully applied in reality \* Case studies allow both student and instructor to examine particular design challenges \* Covers commercial and successful student design projects, and includes over 200 high quality illustrations

**Visual Aircraft Recognition** U. S. Army,2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.
