**The Yakovlev Yak-9 In Profile & Scale Part I** Erik

Pilawskii, 2021-07-02 Volume № 8 of the Profile & Scale series details the Yakovlev Yak-9 fighter to an entirely new standard of authenticity. More than 65 Yak-9 examples are faithfully documented in full-colour profile, many appearing for the first time. Forty-four pages of original and not previously published 1:48 scale line drawings reveal the development and complexity of the Yak-9 family as never before. These line drawings are the culmination of nearly 30 years' dedicated work on the Yak family, and should present the most complete, accurate and illuminating scale work regarding the aircraft at the present time. The book presents many development and variant detail facts about the Yak-9 which have hitherto been unclear. The scale drawings and profiles are complimented by many photographs, diagrams, appendices and other documentary material to explain the technical and construction details of the Yak-9 models covered by this volume: Yak-9, -9D, -9T, -9R and -9B. It is fervently hoped that at long last many hitherto confused or inaccurate details of the Yak-9 family will be clarified and rectified. Many of the colour profiles represent examples which will be familiar to students of the Yak-9, albeit completed to the utmost standard of accuracy. Several profiles will doubtless be new even to experienced readers, and it is hoped these will delight both the casual reader and the serious

student, equally. A brief awards and claim graphic is provided for a number of aces. These pilot cards will round out a volume which should be a treasure trove of information regarding the Yak-9 fighter for both modellers and students of history.

**The Yakovlev Yak-7 In Profile & Scale** Erik Pilawskii, 2021-07  
Volume № 7 of the Profile & Scale series details the Yakovlev Yak-7 fighter to an entirely new standard of authenticity. More than 65 Yak-7 examples are faithfully documented in full-colour profile, many appearing for the first time. Forty-four pages of original and not previously published 1:48 scale line drawings reveal the development and complexity of the Yak-7 family as never before. These line drawings are the culmination of nearly 30 years' dedicated work on the Yak family, and should present the most complete, accurate and illuminating scale work regarding the aircraft at the present time. The book presents many development and variant detail facts about the Yak-7 which have hitherto been unclear. The scale drawings and profiles are complimented by more than 35 photographs, some never before published. It is fervently hoped that at long last many hitherto confused or inaccurate details of the Yak-7 family will be clarified and rectified. A discussion of the peculiarities of the Moscow built examples is included. Many of the colour profiles represent examples which will be familiar to students of the Yak-7, albeit completed to the utmost standard of accuracy. Several profiles will doubtless be new even to experienced readers, and it is hoped these will delight both

the casual reader and the serious student, equally. A brief awards and claim graphic is provided for a number of aces. These pilot cards will round out a volume which should be a treasure trove of information regarding the Yak-7 fighter for both modellers and students of history.

**Yakovlev Aircraft Since 1924** Bill Gunston, Yefim Gordon, 1997  
Alexandr S. Yakovlev was one of the most versatile aircraft designers of his age, but he had the misfortune to work in the USSR which made him almost unknown to the outside world. In 1926-27 he built his first aeroplane and from then on he designed structures which were, time and again, ahead of their time.

**Yakovlev Yak-1, Yak-3, Yak-7, Yak-9** Wojciech Sankowski, Wojciech Zmyslony, 2015  
By 1941, the career of the Spitfire is well underway and the RAF has a powerful aircraft with the Mark V that exceeds all expectations. But it is the Mk IX, commissioned urgently in the summer of 1942, which becomes the most famous Spitfire. The latest version of the Spitfire, the Mark XVI, fitted with a Rolls Royce Merlin engine, is actually a Mk.

**Yakovlev YAK-23** Marian Mikolajczuk, 2008-10-01  
The Yak-23 was the final development of the highly successful Soviet fighter series which began with the Yak-1 in 1940. Its immediate predecessors were the Yak-15 and Yak-17, both simple jet-powered Series versions of the wartime Yak-3; the Yak-23 was an updated all-metal version of the basic design. It saw service with several Warsaw Pact air forces, as a lightweight fast-climbing interceptor. The design, development and operations of the Yak-15, -17 and -23 are described and illustrated in this book, which is complete with photos, scale plans, drawings and color profiles. An essential guide to these first-generation Soviet fighter aircraft!

Aircraft Design Projects Lloyd R. Jenkinson, Jim

Marchman, 2003-04-28 Written with students of aerospace or aeronautical engineering firmly in mind, this is a practical and wide-ranging book that draws together the various theoretical elements of aircraft design - structures, aerodynamics, propulsion, control and others - and guides the reader in applying them in practice. Based on a range of detailed real-life aircraft design projects, including military training, commercial and concept aircraft, the experienced UK and US based authors present engineering students with an essential toolkit and reference to support their own project work. All aircraft projects are unique and it is impossible to provide a template for the work involved in the design process. However, with the knowledge of the steps in the initial design process and of previous experience from similar projects, students will be freer to concentrate on the innovative and analytical aspects of their course project. The authors bring a unique combination of perspectives and experience to this text. It reflects both British and American academic practices in teaching aircraft design. Lloyd Jenkinson has taught aircraft design at both Loughborough and Southampton universities in the UK and Jim Marchman has taught both aircraft and spacecraft design at Virginia Tech in the US. \* Demonstrates how basic aircraft design processes can be successfully applied in reality \* Case studies allow both student and instructor to examine particular design challenges \* Covers commercial and successful student design projects, and includes over 200 high quality illustrations

### MIG Alley: The Fight For Air Superiority [Illustrated Edition]

William Y'Blood, 2014-08-15 Includes more than 20 photo illustrations  
The fight for air superiority began the day the Korean War started and only ended with the armistice three years later. Once the shock of the North Koreans' invasion wore off, it did not take long for the United States Air Force, assisted by other United Nations air forces, to destroy the North Korean Air Force. The arrival of the MiG-15 in November 1950, often flown by Soviet pilots, changed things considerably however. For the remainder of the war, bitterly contested air battles were fought almost daily. Yet despite a decided numerical superiority in jet fighters, the Communists were never able to gain air superiority, testament to the skill and training of the UN fighter pilots, primarily those U.S. Air Force airmen flying the magnificent F-86 Sabre.

### Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-

Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state.

Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

Northrop F-5e & F-5f Tiger II, 2017-07-19 40 color profiles of the well know Northrop F-5E & F-5F Tiger II jet showing variety of the camouflage and markings of different users. Includes aircraft used by USA, Brazil, Chile, Mexico.

**Visual Aircraft Recognition** U. S. Army, 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

**The Central Intelligence Agency and Overhead Reconnaissance** Gregory Pedlow, Donald Welzenbach, 2016-03-15 The CIA's 2013 release of its book The Central Intelligence Agency and Overhead Reconnaissance 1954–1974 is a fascinating and important historical

document. It contains a significant amount of newly declassified material with respect to the U-2 and Oxcart programs, including names of pilots; codenames and cryptonyms; locations, funding, and cover arrangements; electronic countermeasures equipment; cooperation with foreign governments; and overflights of the Soviet Union, Cuba, China, and other countries. Originally published with a Secret/No Foreign Dissemination classification, this detailed study describes not only the program's technological and bureaucratic aspects, but also its political and international context, including the difficult choices faced by President Eisenhower in authorizing overflights of the Soviet Union and the controversy surrounding the shoot down there of U-2 pilot Francis Gary Powers in 1960. The authors discuss the origins of the U-2, its top-secret testing, its specially designed high-altitude cameras and complex life-support systems, and even the possible use of poison capsules by its pilots, if captured. They call attention to the crucial importance of the U-2 in the gathering of strategic and tactical intelligence, as well as the controversies that the program unleashed. Finally, they discuss the CIA's development of a successor to the U-2, the Oxcart, which became the world's most technologically advanced aircraft. For the first time, the more complete 2013 release of this historical text is available in a professionally typeset format, supplemented with higher quality photographs that will bring alive these incredible aircraft and the story of their development and use by the CIA. This edition also includes a new preface by author Gregory W. Pedlow and a foreword by Chris Pocock. Skyhorse Publishing, as well as our Arcade imprint, are proud to publish a broad range of books for readers interested in history--books about World War II, the Third Reich, Hitler and his henchmen, the JFK assassination, conspiracies, the American Civil

War, the American Revolution, gladiators, Vikings, ancient Rome, medieval times, the old West, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.

*Energiya-Buran* Bart Hendrickx, Bert Vis, 2007-12-05 This absorbing book describes the long development of the Soviet space shuttle system, its infrastructure and the space agency's plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA's Shuttle fleet.
