The Unmanageable Consumer Yiannis Gabriel,Tim Lang,2006-04-07 `This book was radically challenging when it was first published, and is only more so today as the concept of consumer collapses under the weight of its many meanings' - Madeleine Bunting, Columnist, The Guardian Western-style consumerism appears unstoppable. Yet it is has failed to deliver greater happiness and is now facing major environmental, population and political challenges. This book examines the key Western traditions of thinking about and being a consumer. Each chapter posits a consumer model with examples from the international community. Readers are invited to enter an exciting and radical analysis of contemporary consumerism which suggests that consumerism is fragile and consumers unpredictable. Updated with new material, this Second Edition looks at the impact of new technologies on consumerism and the consolidation of consumerism and 'consumer' language in spheres like education and health. The authors discuss the spread of consumerism to developing countries like India and the effect of demographic change and migration. The fallout from 9/11 and United States military hegemony is examined, as is the influence on consumerism of Islamic fundamentalism, the anti-globalization movement, environmental concerns and depleting natural resources. This book is of interest to advanced undergraduate, postgraduate and MBA students taking courses on behaviour, buyer behaviour, customer behaviour, consumers and society and retailing. Any one interested in better understanding consumerism will also find this book a fascinating read.

Storytelling in Organizations : Facts, Fictions, and Fantasies Yiannis Gabriel,2000-03-23 Myths, stories, and folklore are part of the fabric and life of all organizations, enabling us to understand, identify, and communicate the character of the organization - its ambitions, conflicts, and peculiarities. Drawing on extensive fieldwork of storytelling in five organizations, this book argues that stories open valuable windows into the emotional and symbolic lives of organizations. By collecting stoires in different organizations, by listening and comparing different accounts, by investigating how narratives are constructed around specific events, by examining which events in an organization's history generate stories and which ones fail to do so, researchers can gain access to deeper organizational realities, closely linked to their members' experiences. In this way, stories enable researchers to study organizational politics, culture, and change in uniquely illuminating ways, revealing how wider organizational issues are viewed, commented upon, and worked upon by their members. The book's first part develops the theory of storytelling by building on various approaches, including narrative, folkloric, ethnographic, symbolic, social constructionist, and psychoanalytic, while the second offers a set of four studies which make use of stories in exploring particular aspects of organizational life.

Run frictionless: How to Free a Founder from a Sale Role Anthony Coundouris,2019-01-17 run frictionless helps founders scale out of a sales role, using a decision-making framework called the 4Qs.The mistake founders and high performing salespeople make is trying to scale up the business by replacing themselves with another human being. Simply, there isn't another human like you looking for a job. Those who are good at selling are busy doing their own startup, not working for you. Scale up a business and free the founder of sales role There are a few things you can try to free a founder from a sales role. One. Don't worry, keep growing. Two. Stop growing the business. Or three, hire a replacement. These are not effective! Over time they will fail you.run frictionless presents an alternative - an option nobody is talking about. Scaling the business with a sales system.A sales system spells out the formula required to make a customer, in a clearly understood sequence. It is similar to a sales funnel or sales process, only more comprehensive. It will tell you the precise number of interactions required to make a customer. If you serve small businesses, this could be 15 interactions. If you serve enterprise forms it could number 25 or more interactions. Predict sales. Distill a sale process to a handful of customer interactions you can teach the whole organization. Win a customer, and know why you won that customer. Get more leads. The book offers several pre-designed customer flows to improve sales you can use right away. Imagine how much business you're turning away, simply because you're not starting conversations with customers the way they want. Better decision-making. If you are going to free the founder, staff have to learn to think like the founder. Make everyone accountable with an easy-to-use framework called the 4Qs. Sell 24/7. Automation moves the customers through a sales system even when the salesforce or founder is not at their desk. Scaling up the startup with a sales system A sales system is key to scaling up a startup. If staff follow the formula, you can predict the odds of creating a customer. Imagine a sales system as a series of dials. Turn the dials and you make an improvement. It is not uncommon to improve sales by 25 percent just by turning a dial. You didn't re-engineer the business or substitute staff. Building lasting sales teams Another benefit of a sales system is it augments your workforce. The best people are working on the highest value tasks, and other tasks can be carried out by less experienced folk. The intellectual property of how a customer is made is in the sales system. Each salesperson needs only understand the part of the system where they contribute. Design your own sales system run frictionless will teach you how to design a sales system, using a framework called the 4Qs. It doesn't matter if you are a fintech startup or a traditional medical practice operating for five years. The 4Qs will take what you know intuitively and organize this knowledge into four powerful quadrants, making it easy to run frictionless.

Work, Consumption and Capitalism Lynne Pettinger,2017-09-15 Sonic branding, guerrilla marketing, celebrity endorsements, customer service excellence and multi-channel advertising are just some of the popular sales techniques that currently promote consumerism in contemporary capitalism. Considerable energy is devoted to encouraging consumers to desire new fashions, to celebrate 'good design', to have feelings for brands and to immerse themselves in sensory experiences, without worrying about the ethics of their practices. Work, Consumption and Capitalism looks at how consumption is produced by focusing on the multiple kinds of work that make consumption possible, from advertising creatives to fashion designers, from self-service checkouts to the hippest barista in the coolest coffee shop. The text encourages students to consider the place of consumerism in global capitalism to develop their own answers to the question: How is consumption made possible? This wide-ranging study of the relations between work, consumption and capitalism draws on interdisciplinary research in cultural and economic sociology, history, marketing studies and cultural studies. With research tasks and discussion questions at the end of each chapter and case studies throughout, it stands as an accessible introduction for students of sociology, business and management, media and communication, cultural policy and cultural studies. Alternative Sources of Energy Modeling and Automation George S. Stavrakakis,2020-03-06 Micro-power domestic organic Rankine cycle (ORC) systems and the selection of the expander and the working fluid are presented, analyzed thoroughly, and numerically evaluated. A promising decentralized hybrid PV-SOFC system is investigated for providing useful energy supply to commercial buildings, capable of power and heat generation at a lower cost. A hybrid solar-combined cycle power plant integrated with a packed-bed thermal energy storage system with a novel recycling configuration enables robust control of collector temperature and net power during times of high solar activity. An automated hybrid (solar and biomass) power plant for thermal energy production for indoor space heating loads coverage is presented. A comprehensive and up-to-date literature review is presented of non-iterative methods for the extraction of the single diode model parameters of photovoltaic modules. A prototype custom built two-speed gearbox with a single stage transmission electric vehicle achieves significant reductions in the overall energy consumption. Two new fuzzy models are presented of high concentrator photovoltaics using the high-accuracy Takagi-Sugeno-Kang approach and the ease of interpreting the Mamdani linguistic rules. Finally, the impact of plug-in hybrid electric vehicles (PHEVs) in the primary frequency regulation is studied and the effects of PHEVs in non-interconnected isolated power systems with significant renewable energy source (RES) penetration are demonstrated through simulations of the isolated power system of Cyprus Island.
