Fatal Flight Bill Hammack,2017-12-16 Fatal Flight brings vividly to life the year of operation of R.101, the last great British airship--a luxury liner three and a half times the length of a 747 jet, with a spacious lounge, a dining room that seated fifty, glass-walled promenade decks, and a smoking room. The British expected R.101 to spearhead a fleet of imperial airships that would dominate the skies as British naval ships, a century earlier, had ruled the seas. The dream ended when, on its demonstration flight to India, R.101 crashed in France, tragically killing nearly all aboard. Combining meticulous research with superb storytelling, Fatal Flight guides us from the moment the great airship emerged from its giant shed--nearly the largest building in the British Empire--to soar on its first flight, to its last fateful voyage. The full story behind R.101 shows that, although it was a failure, it was nevertheless a supremely imaginative human creation. The technical achievement of creating R.101 reveals the beauty, majesty, and, of course, the sorrow of the human experience. The narrative follows First Officer Noel Atherstone and his crew from the ship's first test flight in 1929 to its fiery crash on October 5, 1930. It reveals in graphic detail the heroic actions of Atherstone as he battled tremendous obstacles. He fought political pressures to hurry the ship into the air, fended off Britain's most feted airship pilot, who used his influence to take command of the ship and nearly crashed it, and, a scant two months before departing for India, guided the rebuilding of the ship to correct its faulty design. After this tragic accident, Britain abandoned airships, but R.101 flew again, its scrap melted down and sold to the Zeppelin Company, who used it to create LZ 129, an airship even more mighty than R.101--and better known as the Hindenburg. Set against the backdrop of the British Empire at the height of its power in the early twentieth century, Fatal Flight portrays an extraordinary age in technology, fueled by humankind's obsession with flight

Lighter Than Air Concepts Sascha Hissler,2010-04 Seminar paper from the year 2009 in the subject Engineering - Mechanical Engineering, grade: 2,0, University of Applied Sciences Wildau (Wildau Institute of Technology (WIT)), course: Master Studies in Aviation Management, language: English, abstract: In the fields of Lighter-than-air-craft a growing global interest and quite ambitious activity in developing large high-tech airships for specific promising applications (e.g. cargo lifting) and Zeppelin NT can be observed nowadays. But what exactly is a lighter-than-air craft and how does it work? This paper gives an overview about all LTA-concepts and their pros and cons.

Classical Aerodynamic Theory ,1979

Zeppelinitis Brian C. Lavelle,2005-01-01 This paper examines the development of the concept of the airship as a weapon of widespread destruction and the effect that entertainment literature and the popular press' presentation of this concept had on the English public and government's reaction to WWI Zeppelin attacks. The historical development of the concept of aerial attack on cities is traced from its first application in 1848, its portrayed in novels as a futuristic weapon of immense destructive power, German airship propaganda, and the many English press reports about the estimated capabilities and roles of the airship. When the airship was employed against England in WWI, the population reacted to the image planted in its mind by novels, nourished by propaganda and hyped by sensationalist press reports. Rumor, morbid curiosity, and a borderline hysterical fear of the airship and aerial attack spread throughout the English population to such an extent that industrial war production was affected. By the end of the war nearly a quarter million Londoners sought shelter each night from a relatively minor threat which over the course of four years inflicted casualties and property damage which amounted to less than that suffered on a quite day in the trenches of the Western Front. This effect on the morale of the public vice the physical damage inflicted became a driver of RAF airpower doctrine in the interwar years. The reaction of the citizenry of England to the airship raid is a testimony to the power of the written and spoken word and its ability to unsettle a nation.

Technology and Global Change Arnulf Grübler,2003-10-16 This is the first book to comprehensibly describe how technology has shaped society and the environment over the last 200 years. It will be useful for researchers, as a textbook for graduate students, for people engaged in long-term policy planning in industry and government, for environmental activists, and for the wider public interested in history, technology, or environmental issues.

Flight Physics E. Torenbeek,H. Wittenberg,2009-07-06 Knowledge is not merely everything we have come to know, but also ideas we have pondered long enough to know in which way they are related, and 1 how these ideas can be put to practical use. Modern aviation has been made possible as a result of much scientific search. However, the very first useful results of this research became available a considerable length of time after the aviation pioneers had made their first flights. Apparently, researchers were not able to find an adequate explanation for the occurrence of lift until the beginning of the 21st century. Also, for the fundamentals of stability and control, there was no theory available that the pioneers could rely on. Only after the first motorized flights had been successfully made did researchers become more interested in the science of aviation, which from then on began to take shape. In modern day life, many millions of passengers are transported every year by air. People in the western societies take to the skies, on average, several times a year. Especially in areas surrounding busy airports, travel by plane has been on the rise since the end of the Second World War. Despite becoming familiar with the sight of a jumbo jet commencing its flight once or twice a day, many find it astonishing that such a colossus with a mass of several hundred thousands of kilograms can actually lift off from the ground.

The 'Made in Germany' Champion Brands Ugesh A. Joseph,2016-03-09 Germany's economic miracle is a widely-known phenomenon, and the world-leading, innovative products and services associated with German companies are something that others seek to imitate. In The 'Made in Germany' Champion Brands, Ugesh A. Joseph provides an extensively researched, insightful look at over 200 of Germany's best brands to see what they stand for, what has made them what they are today, and what might be transferable. The way Germany is branded as a nation carries across into the branding of its companies and services, particularly the global superstar brands - truly world-class in size, performance and reputation. Just as important are the medium-sized and small enterprises, known as the 'Mittelstand'. These innovative and successful enterprises from a wide range of industries and product / service categories are amongst the World market leaders in their own niche and play a huge part in making Germany what it is today. The book also focuses on German industrial entrepreneurship and a selection of innovative and emergent stars. All these companies are supported and encouraged by a sophisticated infrastructure of facilitators, influencers and enhancers - the research, industry, trade and standards organizations, the fairs and exhibitions and all the social and cultural factors that influence, enhance and add positive value to the country's image. Professionals or academics interested in business; entrepreneurship; branding and marketing; product or service development; international trade and business development policy, will find fascinating insights in this book; while those with an interest in Germany from emerging industrial economies will learn something of the secrets of German success.

LZ 129 Hindenburg John Duggan,2002 The LZ 129 took four years to build at a time when the world was suffering the impact of the Great Depression and it took the financial support of the National Socialists to bring the work to completion. Ownership of the airship passed from her builders, the Luftschiffbau Zeppelin GmbH to the 1935-established operating company, the Deutsche Zeppelin Reederei, whose objectives included showing the flag at home and abroad. The Hindenburg was involved in propaganda events of 1936, namely the Plebiscite Flight, the Olympic Games

and Party celebrations at the Nurnberg Rally. Following successful service on the South and North Atlantic services, she crashed when coming in to land at Lakehurst in May 1937. Numerous theories as to the cause of the disaster are analysed, including the influence of commercial pressures, which caused a hurried landing to take place in dangerous conditions. A careful analysis of the financial performance of the North American service reveals that an increased number of flights in 1937 would have secured an operational profit. Route details for all flights, together with numerous photographs not published before, complete the story of the Hindenburg.

Popular Historiographies in the 19th and 20th Centuries Sylvia Paletschek,2010-12-01 Popular presentations of history have recently been discovered as a new field of research, and even though interest in it has been growing noticeably very little has been published on this topic. This volume is one of the first to open up this new area of historical research, introducing some of the work that has emerged in Germany over the past few years. While mainly focusing on Germany (though not exclusively), the authors analyze different forms of popular historiographies and popular presentations of history since 1800 and the interrelation between popular and academic historiography, exploring in particular popular histories in different media and popular historiography as part of memory culture.

Helium Wheeler M. "Bo" Sears, Jr.,2015-02-19 The subject of the book is helium, the element, and its use in myriad applications including MRI machines, particle accelerators, space telescopes, and of course balloons and blimps. It was at the birth of our Universe, or the Big Bang, where the majority of cosmic helium was created; and stellar helium production continues. Although helium is the second most abundant element in the Universe, it is actually quite rare here on Earth and only exists because of radioactive elements deep within the Earth. This book includes a detailed history of the discovery of helium, of the commercial industry built around it, how the helium we actually encounter is produced within the Earth, and the state of the helium industry today. The gas that most people associate with birthday party balloons is running out. "Who cares?" you might ask. Well, without helium, MRI machines could not function, rockets could not go into space, particle accelerators such as those used by CERN could not operate, fiber optic cables would not exist, and semiconductor chips could not be made...the list goes on and on.

100 Years of Radar Gaspere Galati,2015-09-15 This book offers fascinating insights into the key technical and scientific developments in the history of radar, from the first patent, taken out by Hülsmeyer in 1904, through to the present day. Landmark events are highlighted and fascinating insights provided into the exceptional people who made possible the progress in the field, including the scientists and technologists who worked independently and under strict secrecy in various countries across the world in the 1930s and the big businessmen who played an important role after World War II. The book encourages multiple levels of reading. The author is a leading radar researcher who is ideally placed to offer a technical/scientific perspective as well as a historical one. He has taken care to structure and write the book in such a way as to appeal to both non-specialists and experts. The book is not sponsored by any company or body, either formally or informally, and is therefore entirely unbiased. The text is enriched by approximately three hundred images, most of which are original and have been accessed by detailed searches in the archives.

Coal Gasification and Its Applications David A. Bell,Brian F. Towler,Maohong Fan,2010-12-08 Skyrocketing energy costs have spurred renewed interest in coal gasification. Currently available information on this subject needs to be updated, however, and focused on specific coals and end products. For example, carbon capture and sequestration, previously given little attention, now has a prominent role in coal conversion processes. This book approaches coal gasification and related technologies from a process engineering point of view, with topics chosen to aid the process engineer who is interested in a complete, coal-to-products system. It provides a perspective for engineers and scientists who analyze and improve components of coal conversion processes. The first topic describes the nature and availability of coal. Next, the fundamentals of gasification are described, followed by a description of gasification technologies and gas cleaning processes. The conversion of syngas to electricity, fuels and chemicals is then discussed. Finally, process economics are covered. Emphasis is given to the selection of gasification technology based on the type of coal fed to the gasifier and desired end product: E.g., lower temperature gasifiers produce substantial quantities of methane, which is undesirable in an ammonia synthesis feed. This book also reviews gasification kinetics which is informed by recent papers and process design studies by the US Department of Energy and other groups, and also largely ignored by other gasification books.

The 100 Most Influential Inventors of All Time Britannica Educational Publishing,2009-10-01 If necessity is indeed the mother of invention, then the individuals profiled in this volume should be considered the most laudable of all midwives. They each saw a need and met it. Readers will learn more about the lives and methodologies of well-known inventors such as Benjamin Franklin and Thomas Edison, and become familiar with several more whose creations have sometimes outstripped their personal fame.

The State of Post-Cinema Malte Hagener,Vinzenz Hediger,Alena Strohmaier,2016-11-30 This book approaches the topic of the state of post-cinema from a new direction. The authors explore how film has left the cinema as a fixed site and institution and now appears ubiquitous - in the museum and on the street, on planes and cars and new digital communication platforms of various kinds. The authors investigate how film has become more than cinema, no longer a medium that is based on the photochemical recording and replay of movement. Most often, the state of post-cinema is conceptualized from the high end of the most advanced technology; discussions focus on performance capture and digital 3-D, 4-K projection and industrial light & magic. Here, the authors' approach is focused on the low-end circulation of filmic images. This includes informal networks of exchange and transaction, such as p2p-networks, video platforms and so called "piracy" with a special focus on the Middle East and North Africa, where political and social transformations make new forms of circulation and presentation particularly visible.

Aircraft Propulsion and Gas Turbine Engines Ahmed F. El-Sayed,2017-07-06 Aircraft Propulsion and Gas Turbine Engines, Second Edition builds upon the success of the book’s first edition, with the addition of three major topic areas: Piston Engines with integrated propeller coverage; Pump Technologies; and Rocket Propulsion. The rocket propulsion section extends the text’s coverage so that both Aerospace and Aeronautical topics can be studied and compared. Numerous updates have been made to reflect the latest advances in turbine engines, fuels, and combustion. The text is now divided into three parts, the first two devoted to air breathing engines, and the third covering non-air breathing or rocket engines.
