**Antarctic Science** Gotthilf Hempel, 2012-12-06 Public awareness of the importance of Antarctic research, particularly in relation to global problems, has increased. The book spans a broad spectrum of Antarctic science from the ozone hole to microbiology to the sea ice. The main focus is on the role of Antarctica and the Southern Ocean in the world climate system, e.g. the formation of sea ice and its relevance to ocean circulation, the biological pump in relation to CO<sub>2</sub> release. The past climate history is revealed by the analysis of ice cores and sediments. Studies of plate tectonics and fossil records reach further back in earth history. Key words in the biological chapters are krill and the rich Antarctic benthos. Finally, the potential conflict between conservationists, researchers and tourists is discussed.

Climate Change and Air Pollution Rais Akhtar, Cosimo Palagiano, 2017-10-05 This book discusses regional and international climate-change, air-pollution and human-health scenarios. The research, from both industrialized and developing countries, focuses on region-specific perspectives of climate change impacts on air pollution. After analyzing the variations of climate data over recent decades, the authors consider the different effects of climate change on air pollution and health. As stressed by the IPCC, "pollen, smoke and ozone levels are likely to increase in a warming world, affecting the health of residents of major cities. Rising temperatures will worsen air quality through a combination of more ozone in cities, bigger wild fires and worse pollen outbreaks," according to a major UN climate report. The report follows the World Health Organization in finding that air pollution is the world's greatest environmental health risk, killing 7 million people in 2014 (compared to 0.4 million deaths due to malaria). Deteriorating air quality will most affect the elderly, children, people with chronic ill-health and expectant mothers. Another report suggests that more than 5.5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India. A study on the air pollution in the USA, suggests that more than half of US population lives in areas with potentially dangerous air pollution, and about six out of 10 of the top cities for air pollution in the USA are located in the state of California. In the face of future climate change, scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems, especially in more populated regions of the world. It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution. Additionally the authors consider the various measures that different countries and groups of countries, like the European Union, have adopted to mitigate the problems arising from climate change and to safeguard the health of population. The book examines the increasing incidence of diseases largely caused by climate change. The countries/regions covered in this study include the USA, Northern Europe (U.K.), Southern Europe (Italy), Canada, Australia, East Asia, Russia, Hong Kong, Taiwan, Thailand, Malaysia, Indonesia, India, South Africa, Mexico, Brazil, Caribbean countries, and Argentina.

First International Meeting on Microbial Phosphate Solubilization E. Velazquez, C. Rodriguez-Barrueco, 2007-05-27 In 2002, sixty international specialists met to discuss problems of high P-unavailability as a soil nutrient for crops, and the hazards of increased phosphate input to aquatic habitats from industrial and mining activities, sewage disposal, detergents, and other sources. Among the presentations were updated solutions to enhance P-uptake by plants, bioremediation potential in the rehabilitation of ecosystems, taxonomic characterization interactions with mycorrhizae, the physiological and molecular basis of PSM, and more.

**Dental Stem Cells: Regenerative Potential** Barbara Zavan, Eriberto Bressan, 2016-07-25 This book focuses on the basic aspects of dental stem cells (DSCs) as well as their clinical applications in

tissue engineering and regenerative medicine. It opens with a discussion of classification, protocols, and properties of DSCs and proceeds to explore DSCs within the contexts of cryopreservation; epigenetics; pulp, periodontal, tooth, bone, and corneal stroma regeneration; neuronal properties, mesenchymal stem cells and biomaterials; and as sources of hepatocytes for liver disease treatment. The fifteen expertly authored chapters comprehensively examine possible applications of DSCs and provide invaluable insights into mechanisms of growth and differentiation. **Dental Stem Cells: Regenerative Potential** draws from a wealth of international perspectives and is an essential addition to the developing literature on dental stem cells. This installment of Springer's Stem Cell Biology and Regenerative Medicine series is indispensable for biomedical researchers interested in bioengineering, dentistry, tissue engineering, regenerative medicine, cell biology and oncology.

**Scars, Marks & Tattoos** Jacqueline Caruso, 2021-03-31 I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to catch my breath and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

**European Instructional Lectures** George Bentley, 2009-06-10 The 10th Congress of the European Federation of National Associations of Orthopaedics and Traumatology (EFORT) is the most important combined congress of the national societies in Europe. At present a total of 36 societies are members of this organisation. The major goal of EFORT is to bring current knowledge of diseases and trauma of the musculoskeletal system to all European surgeons and additionally to welcome colleagues from all over the world to join us in sharing our daily work experience. In the scientific programme the instructional lectures form a very basic and important part of the Congress. In Vienna a total of 25 sessions are included in the programme. The authors come from all over Europe and they discuss topics from many different fields of trauma and orthopaedics. These lectures not only give the opportunity for us to be informed about various diseases, but they are also influenced by the authors' experience based on the treatment philosophy in their own country - again an opportunity to widen the European horizon. They are aimed at both the general orthopaedic surgeons and the young residents and trainees who want to widen their knowledge in different topics of orthopaedic and trauma surgery. As the chairman of the Local Organising Committee I thank all the authors for providing their presentation for publication in this volume. I also address my special thanks to Professor George Bentley for organising this edition.

**History of Military Cartography** Elri Liebenberg, Imre Josef Demhardt, Soetkin Vervust, 2016-01-28 This volume gathers 19 papers first presented at the 5th International Symposium of the ICA Commission on the History of Cartography, which took place at the University of Ghent, Belgium on 2-5 December 2014. The overall conference theme was 'Cartography in Times of War and Peace', but preference was given to papers dealing with the military cartography of the First World War (1914-1918). The papers are classified by period and regional sub-theme, i.e. Military Cartography from the 18th to the 20th century; WW I Cartography in Belgium, Central Europe, etc.

*Profit Without Honor* Stephen M. Rosoff, Henry N. Pontell, Robert Tillman, 1998 *Profit Without Honor: White-Collar Crime and the Looting of America* seeks to elucidate a very broad subject: white-collar crime. How broad? Its domain stretches from the small price-gouging merchant to the huge price-fixing cartel. It can breed in an antiseptic hospital or a toxic dump. It is at home on Main Street, Wall Street, Madison Avenue, and countless other addresses - including, at times, 1600 Pennsylvania Avenue.

**Neural Tracing Methods** Benjamin R. Arenkiel, 2016-09-22 This volume seeks to familiarize readers with a diverse range of technologies and approaches for probing neuron and circuit

architecture, and, when possible, to attach detailed protocols to help guide readers toward practical application. From classical lipophilic dye and conjugated lectin tracing techniques, to electrophysiological, in vivo imaging, viral tract tracing, and emerging genetic methods to mark, manipulate, and monitor neural circuits, *Neural Tracing Methods: Tracing Neurons and Their Connections* includes reference to an arsenal of tools and technologies currently being implemented in model systems ranging from flies to mice. Written for the popular *Neuromethods* series, chapters include the kind of detail and key implementation advice that ensures successful results in the laboratory. Essential and authoritative, *Neural Tracing Methods: Tracing Neurons and Their Connections* collects a comprehensive compilation of chapters authored by inventors and expert users, that describes state-of-the-art neuronal tracing and functional analysis methods in order to aid researchers in continuing this vital pathway of study.

**Organization Theory** Kevin A. Carson,2008 This book applies the economic principles of individualist anarchism, as developed in *Studies in Mutualist Political Economy*, to the study of the large organization. It integrates the insights of mainstream organization theory into that framework, along with those of more radical thinkers like Ivan Illich, Paul Goodman, and R.A. Wilson. Part One examines the ways in which state intervention in the market, including subsidies to the inefficiency costs of large size and regulatory protection against the competitive consequences of inefficiency, skews the size of the predominant business artificially upward to an extent that simply could not prevail in a free market. Part Two examines the effects of such large organizational size on the character of the system as a whole. Part Three examines the internal pathologies and contradictions of organizations larger than a free market could support. And Part Four surveys the potential building blocks of an alternative, decentralized and libertarian economic order.
