Sentience and Animal Welfare Donald M Broom 2014-08-14 Sentience – the ability to feel, perceive and experience – is central to the animal welfare debate as it raises the question of whether animals experience suffering in life and death. This book explores and answers these questions in an objective way, based on the latest research and empirical evidence. Beginning with an introduction to sentience, the book investigates why we are so interested in sentience, when, as a species, humans became sentient and how it has changed over time. The book defines aspects of sentience such as consciousness, memory and emotions, and discusses brain complexity in detail. Looking at sentience from a developmental perspective, it analyses when in an individual’s growth sentience can be said to appear and uses evidence from a range of studies investigating embryos, foetuses and young animals to form an enlightening overview of the subject. With a full chapter covering ethical decisions such as animal protection and experimentation, this book is not only an invaluable resource for researchers and students of animal welfare and biology, but also an engaging and informative read for veterinarians and the general public. The Biomechanics of Insect Flight Robert Dudley 2018-06-05 From the rain forests of Borneo to the tenements of Manhattan, winged insects are a conspicuous and abundant feature of life on earth. Here, Robert Dudley presents the first comprehensive explanation of how insects fly. The author relates the biomechanics of flight to insect ecology and evolution in a major new work of synthesis. The book begins with an overview of insect flight biomechanics. Dudley explains insect morphology, wing motions, aerodynamics, flight energetics, and flight metabolism within a modern phylogenetic setting. Drawing on biomechanical principles, he describes and evaluates flight behavior and the limits to flight performance. The author then takes the next step by developing evolutionary explanations of insect flight. He analyzes the origins of flight in insects, the roles of natural and sexual selection in determining how insects fly, and the relationship between flight and insect size, pollination, predation, dispersal, and migration. Dudley ranges widely--from basic aerodynamics to muscle physiology and swarming behavior--but his focus is the explanation of functional design from evolutionary and ecological perspectives. The importance of flight in the lives of insects has long been recognized but never systematically evaluated. This book addresses that shortcoming. Robert Dudley provides an introduction to insect flight that will be welcomed by students and researchers in biomechanics, entomology, evolution, ecology, and behavior.

Ruby Charm Colors Big Book of Color Charts Susan Carlson 2020-10-08 The Ruby Charm Colors Big Book of Color Charts is ideal for: Keeping your swatches organized Choosing the perfect hue or color combo Tracking what you have & what you need This colored pencil chart book for adult coloring book and colored pencil enthusiasts is useful for those wanting all of their coloured pencils, pastels, inks, watercolor pencils, gel pens and markers swatched in one handy book. 27 pre-labeled charts for popular colored pencil brands Pre-labeled charts for pastel pencils, ink, watercolor pencils & markers Blank charts by color family (reds, oranges, etc.) Blanks charts for extra brands & color combos Black black charts for swatching light colors Room for notes A few fun designs to color Basic color theory (inside) with color wheel (back cover) COLORED PENCIL BRAND CHARTS: Arteza Expert Black Widow Blick Studio Bruynzeel Design Caran d’Ache Luminance Caran d’Ache Pablo Castle Arts Cezanne Chameleon Color Tones Derwent Artists Derwent Coloursoft Derwent Drawing Derwent Lightfast Derwent Procolour Derwent Studio Faber-Castell Polychromos Holbein Koh-I-Noor Polycolor Lyra Rembrandt Polycolor Marco Raffine Marco Renoir Mitsubishi Uni Prismacolor Premier + Verithin Schpirerr Farben Tombow Trojiten Special Luminance & Lightfast Combo PASTEL PENCIL CHARTS: Caran d’Ache; Derwent; Faber-Castell; Koh-I-Noor; Stabilo INK CHARTS: Dr. Ph. Martin and Tim Holtz Distressed WATERCOLOR PENCIL CHARTS: Arteza; Bruynzeel; Caran d’Ache Museum, Neocolor II & Supracolor; Derwent Graphitint; Derwent Intense; Derwent Watercolor; Faber-Castell Albrecht Dürer MARKER CHARTS: Arteza Real Brush Pens; Copics; Faber-Castell Pitt Artist Pens; Spectrum Noir Illustrator Markers; Tombow Dual Brush Pens Charts organized by color family let you swatch all your reds on one page, blues on another, etc. which is helpful when looking for the perfect hue regardless of brand. IMPORTANT: watercolor and marker pages have black-backed pages to minimize bleed-through. The paper in this book (depending on where it was printed) is fairly tough, but obviously thinner than watercolor paper. Colors can look splotchy until completely dry. We recommend using a sheet of card stock or plastic to help protect the pages underneath from colors bleeding through as well as potential rub-through of pencil pigments while swatching. You can make PERSONAL COPIES of the charts you plan to use onto your favorite paper or card stock if the paper in this book feels too thin for your needs, or, if you just want to put those pages of the charts you are using into a ring binder for safe keeping. You can also deconstruct this book for ease of use, so feel free to take it apart, keep the pages you are using in one binder, and store the rest in case you need them later. Many office supply stores (and FedEx service centers) will remove the spine and even spiral-bind or punch holes in the book for you for a small fee. If you choose to do it yourself, I have a step-by-step tutorial using another book (Creative Companion Book Binding DIY) on my blog at rubycharmcolors.com. Or keep it as is--the choice is yours! It is meant to be a book that grows along with you and your artistic needs! Happy color swatching!

Animal Eyes Michael F. Land 2012-03-01 Animal Eyes provides a comparative account of all known types of eye in the animal kingdom, outlining their structure and function with an emphasis on the nature of the optical systems and the physical principles involved in image formation. A universal theme throughout the book is the evolution and taxonomic distribution of each type of eye, and the roles of different eye types in the behaviour and ecology of the animals that possess them. In comparing the specific capabilities of eyes, it considers the factors that lead to good resolution of detail and the ability to function under a wide range of light conditions. This new edition is fully updated throughout, incorporating more than a decade of new discoveries and research.

An Immense World Ed Yong 2022-06-21 NEW YORK TIMES BESTSELLER • Every kind of animal, including humans, is enclosed within its own unique sensory bubble, perceiving but a tiny sliver of our immense world. Pulitzer Prize-winning science journalist Ed Yong takes us on “a thrilling tour of nonhuman perception” (The New York Times), allowing us to experience the skeins of scent, waves of electromagnetism, and pulses of pressure that other animals perceive. “One of this year’s finest works of narrative nonfiction. . . . Yong’s reporting is layered, seasoned with vivid scenes from laboratories and in the field, interviews with researchers across a spectrum of disciplines.”—Oprah Daily “A dazzling ride through the sensory world of astoundingly sophisticated creatures.”—The Wall Street Journal The Earth teems with sights and textures, sounds and vibrations, smells and tastes, electric and magnetic fields. In *An Immense World*, Ed Yong coaxes us beyond the confines of our own senses to encounter beetles that are drawn to fires, turtles that can track the Earth’s magnetic fields, fish that fill rivers with electrical messages, and even humans who wield sonar like bats. We discover that a crocodile’s scaly face is as sensitive as a lover’s fingertips, that the eyes of a giant squid evolved to see sparkling whales, that plants thrum with the inaudible songs of courting bugs, and that even simple scallops have complex vision. We learn what bees see in flowers, what songbirds hear in their tunes, and what dogs smell on the street. We listen to stories of pivotal discoveries in the field, while looking ahead at the many mysteries that remain unsolved. Funny, rigorous, and suffused with the joy of discovery, *An Immense World* takes us on what Marcel Proust called “the only true voyage . . . not to visit strange lands, but to possess other eyes.”

Following expert advice on ideal tools and materials for beginners, the basic techniques of iris folding are introduced.
