Ancient Egypt Transformed Adela Oppenheim, Dorothea Arnold, Dieter Arnold, Kei Yamamoto, 2015-10-12 The Middle Kingdom (ca. 2030–1650 B.C.) was a transformational period in ancient Egypt, during which older artistic conventions, cultural principles, religious beliefs, and political systems were revived and reimagined. *Ancient Egypt Transformed* presents a comprehensive picture of the art of the Middle Kingdom, arguably the least known of Egypt's three kingdoms and yet one that saw the creation of powerful, compelling works rendered with great subtlety and sensitivity. The book brings together nearly 300 diverse works— including sculpture, relief decoration, stelae, jewelry, coffins, funerary objects, and personal possessions from the world's leading collections of Egyptian art. Essays on architecture, statuary, tomb and temple relief decoration, and stele explore how Middle Kingdom artists adapted forms and iconography of the Old Kingdom, using existing conventions to create strikingly original works. Twelve lavishly illustrated chapters, each with a scholarly essay and entries on related objects, begin with discussions of the distinctive art that arose in the south during the early Middle Kingdom, the artistic developments that

followed the return to Egypt's traditional capital in the north, and the renewed construction of pyramid complexes. Thematic chapters devoted to the pharaoh, royal women, the court, and the vital role of family explore art created for different strata of Egyptian society, while others provide insight into Egypt's expanding relations with foreign lands and the themes of Middle Kingdom literature. The era's religious beliefs and practices, such as the pilgrimage to Abydos, are revealed through magnificent objects created for tombs, chapels, and temples. Finally, the book discusses Middle Kingdom archaeological sites, including excavations undertaken by the Metropolitan Museum over a number of decades. Written by an international team of respected Egyptologists and Middle Kingdom specialists, the text provides recent scholarship and fresh insights, making the book an authoritative resource.

Organization Theory Kevin A. Carson, 2008 This book applies the economic principles of individualist anarchism, as developed in *Studies in Mutualist Political Economy*, to the study of the large organization. It integrates the insights of mainstream organization theory into that framework, along with those of more radical thinkers like Ivan Illich, Paul Goodman, and R.A. Wilson. Part One examines the ways in which state intervention in the market, including subsidies to the inefficiency costs of large size and regulatory protection against the competitive consequences of inefficiency, skews the size of the predominant business artificially upward to an extent that simply

could not prevail in a free market. Part Two examines the effects of such large organizational size on the character of the system as a whole. Part Three examines the internal pathologies and contradictions of organizations larger than a free market could support. And Part Four surveys the potential building blocks of an alternative, decentralized and libertarian economic order.

Nanotechnology in Biology and Medicine Tuan Vo-Dinh, 2007-01-24 The combination of biology and nanotechnology has led to a new generation of nanodevices that make it possible to characterize the chemical, mechanical, and other molecular properties, as well as discover novel phenomena and biological processes occurring at the molecular level. These advances provide science with a wide range of tools for biomedical applications in therapeutic, diagnostic, and preventive medicine. Nanotechnology in Biology and Medicine: Methods, Devices, and Applications integrates interdisciplinary research and recent advances in instrumentation and methods for applying nanotechnology to various areas in biology and medicine. Pioneers in the field describe the design and use of nanobiosensors with various analytical techniques for the detection and monitoring of specific biomolecules, including cancer cells. The text focuses on the design of novel bio-inspired materials, particularly for tissue engineering applications. Each chapter

provides introductory material including a description of methods, protocols, instrumentation, and applications, as well as a collection of published data with an extensive list of references. An authoritative reference written for a broad audience, *Nanotechnology in Biology and Medicine: Methods, Devices, and Applications* provides a comprehensive forum that integrates interdisciplinary research to present the most recent advances in protocols, methods, instrumentation, and applications of nanotechnology in biology and medicine.

The Five Senses in Medieval and Early Modern England Annette Kern-Stähler, Beatrix Busse, Wietse de Boer, 2016-05-02 The essays collected in *The Five Senses in Medieval and Early Modern England* examine the interrelationships between sense perception and secular and Christian cultures in England from the medieval into the early modern periods. They address canonical texts and writers in the fields of poetry, drama, homiletics, martyrology and early scientific writing, and they espouse methods associated with the fields of corpus linguistics, disability studies, translation studies, art history and archaeology, as well as approaches derived from traditional literary studies. Together, these papers constitute a major contribution to the growing field of sensorial research that will be of interest to historians of perception and cognition as well as to historians with more generalist interests in medieval and early modern England. Contributors include: Dieter Bitterli, Beatrix Busse, Rory Critten,

Javier Díaz-Vera, Tobias Gabel, Jens Martin Gurr, Katherine Hindley, Farah Karim-Cooper, Annette Kern-Stähler, Richard Newhauser, Sean Otto, Virginia Richter, Elizabeth Robertson, and Kathrin Scheuchzer
