It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

Kirigami Menagerie Hiroshi Hayakawa 2009 In origami, a flat piece of paper is folded to create a dimensional object. Similarly, in traditional Japanese kirigami, paper is folded, cut, and unfolded to reveal complex patterns--like a paper snowflake. Here, author Hiroshi Hayakawa has ingeniously combined these two techniques to create a charming menagerie of 38 animals, from flocks of sheep and swirling dragons to stampeding ostriches and pandas in a bamboo grove. Full-size templates are provided to photocopy onto the card stock of your choice. And for added whimsy, readers can download a fence pattern or textured patterns at www.larkbooks.com. Each project is introduced with a humorous limerick and supported by colorful, modern photography.

The Hidden Mia Roth Čerina 2019 What constitutes the invisible layers of an architecture school? The EAAE Annual Conference of 2019 is titled "The Hidden School", aiming to discuss an architecture school's true character, the substance and the quality of architectural education in the broadest sense, and that which is beyond the stated curricula, yet "whether concretely manifested or subliminally perceived" embodies the culture of the school. The conference, hosted in 2019 by the Faculty of Architecture in Zagreb, focuses upon the subliminal quality of architectural education, that which is beyond the stated curricula and is hard to document through quality evaluation procedures. It can be observed through several indicative aspects, often contributing to the identification of what makes the "true" spirit or substantial quality of the school and uniqueness or peculiarity of its educational path. It can also be the tacit meaning situated between the lines of the syllabus, or generated by the students that contribute to it and the educators that personify it, the various shapes of informal learning, or the spaces it takes place in. Scientific committee: Oya Atalay Franck, Roberto Cavallo, Johan De Walsche, Harriet Harriss, Siniša Justić, Mia Roth-Cerina, Sally Stewart, Tadeja Zupancić.

Russian San Francisco Lydia B. Zaverukha 2009-12-01 Even before San Francisco was founded as a city, Russian visitors, explorers, and scientists sailed to the area and made contact with both the indigenous people and representatives of the Spanish government. Although the Russian commercial colony of Fort Ross closed in 1842, the Russian presence in San Francisco continued and the community expanded to include churches, societies, businesses, and newspapers. Some came seeking opportunity, while others were fleeing religious or political persecution. In the 1920s, San Francisco's Russian population grew exponentially as refugees of the Russian Revolution and civil war arrived, and by the 1950s, a vibrant and culturally rich Russian American community was thriving in San Francisco. Elements of Parametric Design Robert Francis Woodbury 2010 "This book helps designers realize the potential of the

parameter in their work. It combines the basic ideas of parametric systems with equally basic ideas from both geometry and computer programming. It uses design patterns as its main tool. A pattern is a generic solution to a shared problem. Using patterns to think and work will help designers master the new complexity imposed on them by parametric modeling. This book explains how to think, model and conceive complex parametric designs. Through design patterns and many examples, it shows designers how to lift their knowledge and skill out of the CAD toolbox into higher levels of design thinking and action."--Back cover.

Creaselighting Mark Bolitho 2020-11-13 Creaselighting was my third collection of models. It followed from Origami Projects and More Origami projects. The premise of the book was to develop a book around folding techniques rather than what the model was. The project explores folding techniques and different styles of folding. Central to the book is the question "How do I fold?" rather than, "What am I folding?". For most of the projects the folding journey should be as interesting as the destination. I have tried to avoid complexity and kept all the models as simple and elegant as possible. My main consideration is producing models that are enjoyable to make. The next section starts to explore some of the themes in the book and gives a bit more background to the models themselves and why I have included them. Most of all, if you have got this far, I hope you enjoy the origami. It took several years to develop the models and ideas in Creaselighting. If you have any thoughts or comments, do let me know. In 2004 I embarked on working full time as an origami designer. This has given me many more opportunities to write and develop origami books. Although many of these were commissions and designed in conjunction with the respective publishers.

Adhocism Charles Jencks 2013-05-24 The triumphant return of a book that gave us permission to throw out the rulebook, in activities ranging from play to architecture to revolution. When this book first appeared in 1972, it was part of the spirit that would define a new architecture and design era—a new way of thinking ready to move beyond the purist doctrines and formal models of modernism. Charles Jencks and Nathan Silver's book was a manifesto for a generation that took pleasure in doing things ad hoc, using materials at hand to solve real-world problems. The implications were subversive. Turned-off citizens of the 1970s immediately adopted the book as a DIY guide. The word “ad hocism” entered the vocabulary, the concept of ad hocism became part of the designer's toolkit, and Adhocism became a cult classic. Now Adhocism is available again, with new texts by Jencks and Silver reflecting on the past forty years of ad hocism and new illustrations demonstrating ad hocism's continuing relevance. Adhocism has always been around. (Think Robinson Crusoe, making a raft and then a shelter from the wreck of his ship.) As a design principle, ad hocism starts with everyday improvisations: a bottle as a candleholder, a dictionary as a doorstep, a tractor seat on wheels as a dining room chair. But it is also an undeveloped force within the way we approach almost every activity, from play to architecture to city planning to political revolution. Engagingly written, filled with pictures and examples from areas as diverse as auto mechanics and biology, Adhocism urges us to pay less attention to the rulebook and more to the real principle of how we actually do things. It declares that problems are not necessarily solved in a genius's “eureka!” moment but by trial and error, adjustment and readjustment.
