The Hidden Mia
Mia Roth Cerina 2019
What constitutes the invisible layers of an architecture school? The EAEE Annual Conference of 2019 is titled ‘The Hidden School’, aiming to discuss an architecture school’s true character, the substance and the quality of architectural education in the broadest sense, and that which is beyond the stated curricula, yet ? whether concretely manifested or subliminally perceived ? embodies the culture of the school.OThe conference, hosted in 2019 by the Faculty of Architecture in Zagreb, focuses upon the subliminal quality of architectural education, that which is beyond the stated curricula and is hard to document through quality evaluation procedures. It can be observed through several indicative aspects, often contributing to the identification of what makes the ‘true?’ spirit or substantial quality of the school and uniqueness or peculiarity of its educational path. It can also be the tacit meaning situated between the lines of the syllabus, or generated by the students that contribute to it and the educators that personify it, the various shapes of informal learning, or the spaces it takes place in.0Scientific committee: Oya Atalay Franck, Roberto Cavallo, Johan De Walsche, Harriet Harriss, Sini’a Justic, Mia Roth-Cerina, Sally Stewart, Tadeja Zupancic.

Profiles in Operations Research
Arjang A. Assad 2011-06-28
Profiles in Operations Research: Pioneers and Innovators recounts the development of the field of Operations Research (OR), the science of decision making. The book traces the development of OR from its military origins to a mature discipline that is recognized worldwide for its contributions to managerial planning and complex global operations. Over the past six decades, OR analyses have impacted our daily lives: when making an airline or hotel reservation, waiting in line at a bank, getting the correctly blended fuel at the gas station, and ensuring that the book you are holding arrived at its destination on time. OR originated in the late 1930s when British scientists from various disciplines joined Royal Air Force officers to determine the most effective way to employ new radar technology for intercepting enemy aircraft. During World War II, similar applied research groups were formed to study, test, and evaluate military operations on both sides of the Atlantic. Their work resulted in great improvements—OR helped the Allies win the war. The scientific field that emerged from these studies was called operational research in the U.K. and operations research in the U.S. Today, OR provides a broad and powerful science to aid decision making. Profiles describes the lives and contributions of 43 OR pioneers and innovators and relates how these individuals, with varying backgrounds and diverse interests, were drawn to the nascent field of OR. The profiles also describe how OR techniques and applications expanded considerably beyond the military context to find new domains in business and industry. In addition to their scientific contributions, these profiles capture the life stories of the individuals—interwoven with personal tales, vivid vignettes, family backgrounds, and views of the mission and future of OR. Collectively, the profiles recount the fascinating story of the growth and development of a field enriched by the convergence of different disciplines. The Editors: Arjang A. Assad is Dean of the School of Management, University at Buffalo, State University of New York. Saul I. Gass is Professor Emeritus, Department of Decision, Operations & Information Technologies, Smith School of Business, University of Maryland, College Park. From the Reviews Profiles In Operations Research: Pioneers and Innovators. Book Review by Nigel Cummings; U.K. OR Society’s e-journal, Inside OR., Sept 2011. "I can thoroughly recommend this book. I found it both enlighteningand undeniably gripping, so much so in fact, you may find it difficultto put it down once you have commenced reading it. Arjang A. Assad and Saul I. Gass have created a masterwork whichwill serve to immortalise [stet] the pioneers of O.R. for many years to come." *For a list of all

Skyscrapers
George H. Douglas 2004-08-05
This history of skyscrapers examines how these tall buildings affected the cityscape and the people who worked in, lived in, and visited them. Much of the focus is rightly on the architects who had the vision to design and build America’s skyscrapers, but attention is also given to the steelworkers who built them, the financiers who put up the money, and the daredevils who attempt to “conquer” them in some inexplicable pursuit of fame. The impact of the skyscraper on popular culture, particularly film and literature, is also explored.
